Which "technical requirements for Extra class" have been reduced?

Answer: None.

If you can't debate the issues on facts, I suppose it's OK for you to make up arguments to suit your agenda, but of course you risk being exposed as an insubstantial pompous windbag.

Blow on, Robert.

Let me get this straight: Are you saying that just because you are happy,
content, and all hunky-dorey, that there were not other hams who were vehement
about losing priveleges to so-called incentive licensing? If this is the case,
then you need a serious reality check.

Me too. But I just can't think of anything that would be gained by it -
other than being able to say 'I'm better than you are'. I know that's
the sort of thing that appeals to some people. I just don't think that
government needs to get into that kind of business. The FCC administers
radio spectrum, not academic programs.

> My question for you is -- what do you have against striving to
> achieve a lofty goal?

What indication do you have that I don't strive to achieve lofty goals,
Larry?
I just don't feel obliged to demand the same thing of others that I
demand for myself. I figure I've got a better shot at achieving my
goals if I spend less time worrying about the other guy, and more time
concentrating on my own situation. Furthermore, I don't need the
government telling me what I need to do in the way of self-improvement.
I'm sorry if you do.

The table says that some people die before they're 40, Brian.  Would
that be timely enough for you? ;-)

It's not a smokescreen to point out that what you said contradicted the
facts you presented.  I can't help it if you didn't say what you meant.

If they can think something like 'Clunky Clunky' when they hear a 'C'
in a word at 20wpm, they think a lot faster than I. At 20wpm, I would
consider 'Clunky Clunky' to be extremely distracting and limiting.

Then I guess that means you ARE worried about there being too many CW
ops.

Anybody got any ideas on how to cut down on the number of CW ops for
poor ol' Dick here?

I don't think they will have a problem with Morse code use in the Cellular Service. They would only raise objections if people had to be tested on Morse code decoding before they could use a Cell phone.

I thought I heard Morse code emmanating from a cell phone while I was stranded at the Pittsburg airport earlier this week. Nice to know it was not my imagination. :-)

Tech+ licensees are being renewed as Tech. They are being counted as
"non-coded" in the stats you publish.

I think that a 2 meter HT is the simplest form of amateur
communication. And, I think there's reason for code to be a part of
amateur testing.

> What is wrong with live and let live?

There's a few things wrong with it. Foremost being that it isn't
universally applicapble.

All you have to do is wait. Judging from the ages of most CW ops, a lot of them
will be silent keys within the next ten years.

That's nice, T.L.  It was more of a rhetorical question.  But I guess I
asked for it.

Raise the Morse code requirement for the lower 25kHz to 100wpm?

You cannot determine that from the statistics at AH0A.

Some of the "growth" of the Technican class license consists of code-tested licensees.

Since the April restructuring of last year, all code-tested Tech Plus who renew are being renewed as simply "Technician". Thus the "Technician" column now contains roughly 10% (minus attrition and upgrades) of licensees from the old "Technician Plus" ranks.

What the hell do you expect? Ham radio has stagnated since influx of the computer era. Nothing was done to rise to the challange. The Ancient Radio Relay League insisted on keeping high-speed code testing as a measure of someone worthy to receive a license. Commercial networks upgraded to 2400, 9600, 28.8k, and 56k througout the 90s, while packet radio was stuck at a pitiful 1200 baud.

>Bob Wex w2ilp (Insure License Potential)

For someone who wants to pursue a career in communication technology, ham radio might serve as a springboard for that career. Even so, the drive and ambition to achieve technical knowlege will be there without the need for more license classes. Ham radio isn't for everybody.

I knew you guys would come up with some great ideas. But I think that
nothing short of a federally mandated 'no lids, no kids, no space
cadets' requirement would satisfy the malcontents out here.

Havent operated on the old ham bands for a couple years now. I keep the license up to date, but there are just too many idiots on the air for it to be anywhere near enjoyable any more. don`t worry. the FCC is selling them off piece by piece anyway. Ham radio has had its day, and the ARRL and FCC let it go down the drain. It is now going to die a well - deserved death, and leave us all in peace. We still have the internet, and we can easily talk round the world on it. I stopped putting up with CB pond scum years ago, and since that is what the Ham Bands are on their way to becoming, I think it derserves equal attention .....

I proved you were a phony before. This confirms it. The ILLEGAL FAGGOT KEYCLOWNS from rec.radio.cb have gotten me booted from several isps. All because I retaliate to their childish ways. Its ok for them to threaten me with physical harm, but if I say anything back they make me look like the bad guy, even some hams have sided with these criminals. I have no use for criminals. Check out my webpages of the ILLEGAL FAGGOT KEYCLOWNS. I will not stop and you can't do shit about it!

The REAL N8WWM., not the trashy fake!

NOT! The ARRL gave up helping ham radio and improving things about two
years ago. From what I see they're not planning to propose making things
better in the future either.  ARRL stratagy is like Outcome Based
education, they don't want quality, only quantity.

 Lets get **THIS** straight - You said "All it (incentive licensing did
was piss off a lot of hams who lost privileges because of it".
 I was a ham who lost privileges because of it. Rather than let it piss
me off, I, a mail order General class ham, shortly made the 260
miles-one-way trip to the FCC office and came away with an Extra class.
Just as many, many other hams did.
 So, Pal, you don't know what you're talking about. And that surprises
no one.

 Well you can always wish. There is more and more CW activity as time
goes by, instead of less. If you were interested enough to listen you'd
know that. And lots of young people on CW as well. Yesterday I worked a
24year old CW op who had been licensed since age 13. His calsign suffix
was even "CW".
 I know, that goes against your wishes but that's surely not the only
thing that goes against your wishes. Wishing just won't make it come
true. Sorry.

And now we've got folks who couldn't fix a squeeky wheel if their life
depended on it.

You couldn't be more wrong, and it is really curious how you managed to
come to that conclusion. There's littlein ham radio I enjoy more than a
CW QSO with a young ham, and his code speed is not an issueat all.

 It's plain as day- you have no clue. You haven't had even a receiver on
the ham bands lately, if ever.

>talk round the world on it. I stopped putting up with CB pond scum years
>ago, and since that is what the Ham Bands are on their way to becoming, I
>think it derserves equal attention .....

The downslide began well before the current license testing scheme was put into effect. If the bands are sold off, so be it. I'll take my entire share of the profits of such a sale down to the corner Starbucks and by myself tall caramel macchiato.

I know most of the members of the IEEE SCC-28, Bob; their expertise is much less like chicken soup than some of the posts in this thread, yours and mine included.

I do not believe that you are qualified to pass judgement on their expertise, nor do I believe that you know anything about their expertise than what your imagination tells you might be true.

<chicken soup analysis deleted>

> I admit that I dunno at this point in time... nor does N9GL. Let us

Can you tell us what you believe to be lacking in N9GL's CV that makes you conclude that he is not qualified to make the statements that you "dunno?"
If it helps, see:

http://www.arrl.org/rfsafety/index.html
http://www.arrl.org/rfsafety/whoweare.html

and for Mr Lapin personally, see:

If he had a license he is a HAM not a CB'er
Frankly Freebanders are like the Hams of old. If you look at the FCC
enforcement logs The Hams are out of control and need enforcement while
Freebanders are mature and working to improver thier knowledge, save lives,
promote freedom and democracy, and gernerally aid and improve the geneneral
welfare or thier comunities.

Cecil is not the one remaking technology, Dick; the technological world is evolving. IMHO, the very survival of our Service could depend on the number of hams who learn enough about new technology to stay relevant. Our survival may also depend on the number of hams who say "***NO***!!!" to learning that new technology, too.

Riley Hollingsworth has been telling hams that we should not let Amateur Radio become obsolete under our watch. What do you think he means by that and why do you think he is saying that to his fellow hams?

I have not been limited by the number of license classes in the ARS; the
things I have done within Amateur Radio have exceeded the scope of any exam

I have ever taken. Do you believe that I am not meeting the basis and
purpose of ham radio?

> > You want that type of license=respect, then get a college
> > degree or a tech school certificate.

> I have a BSEE...but when I did not have a BSEE my ham license meant
> more to some employers than a BSEE because I had been able to show that
> as a Ham I had been able to build my own equipment from scratch.

I would hold a ham who had a demonstrated ability to construct his or her
own equipment over a BSEE for most electronics technician jobs. I would
hold an experienced electronics technician over such a ham, though.

Are you now proposing that hams be tested on their ability to build their
own equipment from scratch?

> <snip> My answer is by drastically changing their attitudes.

> past)...BUT let it not be too late to attract new hams into our ranks
> by offering more modern challenging exams that can not only give more
> pride but can prove more value.

If the unlimited challenges of being permitted to do all the things you feel
hams "must" be tested for is not enough, you vision of chaning the attitudes
of all these potential newcomers is just a pipe dream.

The organization that you're looking for is the ARRL.
>

The ARRL is the problem...not the solution.--

Part of the reason, Hans, is that amateur stations within 80 km of an AMTS station cannot operate without the express permission of the AMTS station. Some have been willing to grant such permission; others routinely deny it. With major holes in what was hoped would be reasonably seamless backbones, it is a chicken-egg situation.

Do you not see that there is a person connected to the other end of the things you say here, Larry? I have seen you make plenty of statements that were very clearly personally directed.

> With the notable exceptions of Steve Mendelsohn and Ed Hare,

ARRL HQ has a staff of about 120 people. Mendelsohn is not an HQ staffer, btw; your dealings with him have been in his role as a volunteer. What percentage of those 120 people who work at HQ have you actually has personal contact with?

The Novice test I took had no questions on antennas, propagation, feed lines, tubes,... well, the list goes on for quite a bit.

If you are saying that a test that requires an applicant to study over 1200 questions is not as "qualifying" as that dirt-simple Novice test I took, you are incorrect.

> You know the appropriate descriptive word - and it isn't bullfeathers.

I will simply use the word incorrect and let it go at that.

I was first licensed in 1963. My first QST article was, if memory serves,
in 1987. I sure am glad I didn't have some old timer telling me how
worthless I was all those years.

Yet, in spie of that fundamental "basicness", that great simplicity,
no one in the commercial sector puts ANY value o its use in an
emergency. Indeed, it has been abondoned by just about all
except some ham use for enjoyment.

>Any ham
>radio operator who is unable to make it work simply because he was to
>uninformed to cause himself to learn to be able to use it is thus
>unqualified by definition, as you are so fond of saying.

In your not so humble opinion perhaps, but other than
yourself and a handful of others that think like you, there
is no one saying a non-code ham is thus unqualified. Point
us to even ONE credible proponent, other than some hams,
of CW as an emergency mode.

> 2meter FM is basic radio communication? On what planet?

Given the ease and common place existence of a
preponderance of 2m FM, it is, indeed a basic mode today.

Cheers,
Bill K2UNK

Vince, be pragmatic.  If it means the survival of the ARS, then we do
the quantity thing, and let Riley handle the guys that think they own
the ARS.  If there's not a real breakthrough on the actuarial tables
soon, the ARS is in trouble.

Tracy, pretend for a moment that I know nothing of the ARRL and the ARS.
 Now explain your position WRT the ARRL, and identify the organization
that you believe to be the solution, and state why.

Thanks, Brian

Long as he isn't clogging up the band?

Well, gooooooood.  Then you can pick yerself one of those spiffy KC
calls for a vanity call, once you wait the appropriate length of time.
Or you can go for one of Mike Deignan's multiple callsigns.  They
were turned in sooner.

Anyhow, its been great hearing from you again.

So now one needs to be an expert in scaleology to be able to state that
the numbers of coded hams are dropping and the number of no-coders is
increasing. This must mean that the Postmaster General knows more about
ham radio than you.

Major sumptin.

But nothing suprises me anymore. Why just the other day, Dick admitted
that CW was doomed without the government forced testing. Seems it
isn't worthwhile enough to learn it on its own merits. After all those
years of claiming PEEU.

I just wish these other guys would come clean and quit the smokescreens
and diversions.

73, Brian

Good Job Brenda Ann ... i have also been a ham since 1978 code never
interested me at all i passed every element of the theory more than once in
hopes that one day i would get my speed up to 12 wpm ... well i never did
study anymore code and now thanxs to the fcc i am a general. and the same
as you i know more electronic theory and amatuer operating principles etc
than many extra, advanced and general class hams who have been able to pass
the code portion. for what its worth.

Oh, when did you let your license lapse?

Of course, you assume that all hams, coded and codeless, weigh the same.

I couldn;t agree more myself. while I won;t disagree that there are some
bad eggs in both CB and Amateur. the are not ALL bad. And improvements
can be made if you go about it in the right way.

I am in the proccess of getting my ticket. and I feel that I am a
responsible and LEGAL CB operator and I will continue to be courtious

and respectfull on the amateur bands when I finally have the priviledge to use them. I have friends here in town that are hams, sometimes I go over to their house for coffee and they share their wisdom and experiance with me. I just hope that someday I can do the same with a new radio operator.

It's true look at your own foul and filthy mouth!
Ham's always use foul language and filthy talk on the radio just like they do on this newsgroup. Freebanders know better. Freebanders are mature and can express themselves without spewing forth filthy language.

Gee, you were strangely absent when I was set upon by the virulent
pro-coders for saying there was no one on the novice subbands 13 years
ago. Oh, lemme see, "at least 10 years, (but not more than 12 years)."
That must splain it.

> Even so, I don't expect I'll need permission from a dump huck like

My name is Timmy, a punk-ass little fag
Keyclowns rely on me to lick your jizz filled bag
I sit in my chair and play with my dick all day long
At night I go to truckstops, to suck some keyclown dong!

My sister is abnormal, and I know that of course
I watched her last night in the barn
Happily fellating a horse

Yes, I'm Dimmy the drunk ass super fag
A peter pupper of the first degree
Just say the word and I'll go down
Upon my gayboy knees!

My name is Timmy, a punk-ass little fag
Keyclowns rely on me to lick your jizz filled bag
I sit in my chair and play with my dick all day long
At night I go to truckstops, to suck some keyclown dong!

My sister is abnormal, and I know that of course
I watched her last night in the barn
Happily fellating a horse

Yes, I'm Dimmy the drunk ass super fag
A peter pupper of the first degree
Just say the word and I'll go down
Upon my gayboy knees!

Of course. But the whole assumption that Morse must be learned slow and
the speed built up is a faulty one. Koch showed that as early as 1936.
He was able to get groups of people from no Morse at all to 12 wpm in
under 20 hours.

What about the anger, bitterness and name calling on the other side?

Agreed.

seen here.

Better yet - let them see the mode IN USE. By skilled operators. Don't
tell them - SHOW them.
>
> I think most of us realize that, sooner, or later, the Morse code
requirement

Already has. What's left is hardly a test at all.

Yup.

> I have seen the

circles.

Most of it is based on false information, too. And many of the most
angry were not hams then, either.

>Don't
> doubt for a minute that this next generation of hams will remember

> nets, and looking for those 5 wpm CQs and giving them a nice QSO and
some
> affirmation that this is a fun mode that will bring value and
enjoyment to
> their use of it.

We are.

>Where are these things?

All over the place. But you have to know where to look.

>Has ARRL done them?

NO. Not in many many years. The closest thing to it is the slow speed
NTS nets and W1AW code practice, both of which are excellent. But they

are about the limit.

> Has FISTS?

Yep - for years. Try a CQ on the FISTS freqs at 5 wpm and see what
happens.

> Have you?

For the past 33 years.

> All I see by those who may think they are "defending" Morse code is
> posturing and name calling.

Some of us are trying to combat false information with facts.

> IMHO, taking real steps to get people from 5 wpm

The fun never left. We just need to stop hiding our light under a
bushel.

I'll show you my list if you show me yours. ;-)

Yes, but are you proposing that having such an exam structure is appropriate? How many exam steps do you think are necessary and appropriate between the granting of minimal Amateur Priveleges and the granting of the whole set?

>My question for you is -- what do you have against striving to
>achieve a lofty goal?

Do you see everything through the filter of striving, or a lack thereof?

Do either of you seriously think this is at all related to whether code should
be tested in the Amateur Radio Service?  It looks to me like two rrapers
carrying an argument to any extreme necessary to outpoint the other.

80 meters is probably the most underused band these days.
Try it on weekends, and more to the point, go to 40 meters,even 30 or 20
are much more active.

Nope, the alleged perp is a licensed ham, licensed for about five years. He has not yet been formally charged, so there is no mention of his name in printed news reports, although his name was mentioned on at least one radio report. This guy has been at it for over a year, faking "officer down" calls, cross-linking different police and sheriff services, and similar crap. Technically smart, and has been able to avoid being located by being mobile -- he got caught because an officer noticed his vehicle antenna at the scene of a false-alarm ambulance call. He has reportedly admitted everything to the cops.

I think that Dick is right. When I got my General in 1959 most hams
probably thought like me: Why put in a lot of extra work for an Extra
ticket when it didn't get you much extra. But when Incentive Licensing
came along, many thousands of hams did go ahead and get their Extra
who wouldn't normally have done so without the added frequency
incentive. Some like me grumbled about it and some like Dick upgraded.
There's no doubt that Dick's method is the best way to go. However the
unfairness of the situation doesn't change...

>How many hams dropped out of ham radio altogether because
> the felt the ARRL screwed them?

I remember that lots of hams threatened to quit the ARRL over
Incentive Licensing, but only someone with membership data would know
if a large number of hams actually did. Ed? I personally don't know of
a single ham who actually quit the hobby as a result of Incentive
Licensing. Grumbling may be silly, but quitting would be real dumb...

You seem to have forgotten something along the way here Dick. Follow
the thread back a ways and re-read what I have written to you. Read

only what it says. There is no hidden text between any of the lines.
We have been discussing operating at 5 WPM in the lower 25.

Thanks and 73,

Jim AC6XG

Do you feel that CW should be banned from those segments? In the US it currently is authorized on all ham frequencies, except perhaps 219MHz.

Or should we continue the long-standing gentlemens agreement that CW operators use the bottom portions of most bands, even though they legally can operate Morse from the top to bottom of each band. I think it's interesting that most countries, except the US, do not chop the bands up into mode-specific segments, but rather let dynamic "market forces" of the hams themselves determine how much gets "allocated" for each mode.

Probably not, Ed, since he can't even Cut and Paste a web
address properly. Maybe it's the early stages of Alzheimers?

I'm not an amateur radio licensee and I decoded

    T E N   F O U R   G U D   B U D D Y

just fine. :-)

...how quickly they forget...

The SAME trend was happening well before April 15, 2000.

If you wish, I can post stats on NEW licensees for the last
three years. Looks even worse for the code-tested numbers.

Major Kelley, sir, you are just trying to ignite a flame war by
concentration on a trivial phrase of English.

My point was that the non-code-tested US amateur licensees
keep increasing in number while the code-tested US amateur
licensees are decreasing in number.

What is your dispute with that?

Spin it any way you want, Hans, but OVER THE LAST
THREE YEARS the code-tested licensees are decreasing
in number while the non-code-tested licensees are increasing.

Ed said the same thing as you did so, if you like I can post
NEW licensees' numbers. Still looks bad for code-tested
licensees' numbers...before April 15, 2000, as well as after.

In Dick's case he must have gotten tired of waiting for that
massive Missouri earthquake he read about in a book. Maybe
his "emergency rig" code key oxidized into uselessness
while waiting for it?

Heck, Dick's statement isn't near as bad a tRoll's wanting to
GIVE AWAY amateur radio spectrum to everyone else
because no one will honor and respect his regency. :-)

>I just wish these other guys would come clean and quit the smokescreens
>and diversions.

Oddly enough, a telemarketer called tonight just after supper.
It was a chimney cleaning service soliciting curstomers. I
told them that this newgroup would be good for cleaning and
smoke eliminations. They replied that they weren't big
enough to handle the task... :-)

Fine, just contact KD6JG or W6MJN and ask them. They don't know I am using them as references so they aren't prompted by me. Want some magazine article references? Go to HAM RADIO magazine indexes (there's at least one web site for them if you don't have index issues) and read the articles. You might learn something from them. Note: Check the Masthead for HR to see if I've been listed as an Associate Editor. You need some industry experience? Check with personnel departments at Rocketdyne Division of Boeing (it was of Rockwell International when I worked there), Teledyne Electronics of Newbury Park, CA, General Electric Co. past records of RCA Corporation, Electromagnetic and Aviation Systems Division, Van Nuys, CA, Hughes Aircraft Co. Missle Systems Division of Canoga Park, CA, and Hughes Aircraft Co. Aviation Radar Division of El Segundo, CA, Electro-Optical Systems division of Xerox Corporation, Pasadena, CA. Since 1956 those corporate entities have undergone some name and location changes so be patient. I think John Memmen of Teledyne is SK (?) but Harry Terraneau should be still alive...both are/were licensed radio amateurs. Micro-Radionics Inc., of Van Nuys, CA, got acquired by a succession of larger microwave houses but Stan Wolf of MRI (long licensed as a ham) was my boss way back when that was a stand-alone microwave company.

You want patent information? No problem, connect to the old IBM patent site and do a search for my name. Only one patent granted. You can also search the Patent Gazeteer for 1974 if you have access to a printed copy. Want to check academic records? OK, contact California State University at Northridge (CSUN) or University of California at Los Angeles (UCLA). You can find me listed in the Northwestern directory of the Los Angeles telephone book with the address printed with my HR bylines (anyone trying to telephone-stalk will find Pacific Bell security folks unhelpful). I am in the FCC ULS, by the way, although you keep saying I'm not. :-)

None of the above references I've listed has been created or put there by myself. Those are all third-party references. Such are impossible to forge, exaggerate, or lie about such as with some "personal" web page or vague newsgroup ramblings.

You won't like any of them and respond by "curriculum vitae" whining and bitching plus other sneering noises. :-)

> And more than one person here knows the name of the company...even
>has my corporate addresses and phone numbers. You gonna call and chat,
>Lenni? I'll give you the 800 number if you care.

Why is it so difficult to name one's employer? Company policy against it? If so, why do "more than one person" (outside the company) know it? Do you spend your employer's time "chatting with others" presumably not about company business?

> And by the way, I AM doing both.

"Both what?" Spending company time chatting about personal subjects? Spending company Internet time posting over the Internet? Naughty, naughty... :-)

>Again, unlike you, I saw that
>there were a great many things that I would like to do in my life.

Steebie baby, I've done lots of things in my life but you will never ever say they are good enough...because all you want to do, indeed are obsessed with the subject, is "get back" at someone you feel slighted your royal rank, status in the USARMCC in a newsgroup. :-)

>I may never completely master any one of them, but I will do my best to
>experience as many as I can.

For starters, try to become civil in a newsgroup. I know that is very hard, but you can do it with lots of patient hard work.

> No excuses as to why I didn't do it, other than I didn't do it.
>No "elitists" holding me back, or failed excuses.

Steebie...the main subject of this newsgroup is the Retention or Elimination of the US amateur radio license code test. That subject can be argued on its own and NO ONE need be licensed in order to discuss that part of Part 97, Title 47 CFR.

>> What is more amusing is this person's claim to once
>> being a "commissioned officer" in some state militia,
>> ostensibly as THE radio officer of an entire infantry
>> brigade...which would require at least a major rank.
>
> Acutally, it requires a Captain. But I will pass on that in the
>future the Adjutant General shall call you first before assigning TO.

A Brigade is 4 Battalions. A Battalion is 4 Companies. A Company is 4 Platoons. A Platoon is 4 Squads of 12 men each plus two more. A Brigade would have around 3000+ personnel. Only a Captain is THE radio officer of a Brigade?

Not in any Table of Organization of regular Army or National Guard units I've seen. How is the "E" of TO&E? Still using horse-mobile tube transceivers or something? :-)

>> When queried on this, said person replied he "had
>> the papers in his wallet." Apparently that is
>> "confirmation" for everyone else.
>
> Of which I offered a copy. You declined. Your loss.

You didn't post the scanned copy of it on your K4YZ

home page as requested along with all your accomplishments.
Gosh, a discharged USMC member who gets a COMMISSION
as a civilian ought to be so proud of that that they shouldn't
hesitate to Tell The World!   :-)

How does one get a commission as a member of a state
army unit when they were once medically discharged from
a regular military branch? Is there some Faith Healing we
haven't heard of?

>PLEASE SEND PRIVATE E MAIL COMMENTS TO K4YZ@AOL.COM. RESPSONSES TO THE
>DEJA MAY OR MAY NOT BE RETRIEVED IN A TIMELY FASHION.

Hmmm...apparently the unnamed employer got a bit pissed at
an employee using company Internet facilities? One can only
wonder at that... :-)

HAH! That's a good one! We gonna compare lobster consumption, too? You'll win that one, I betcha. (Ayeh!)

But I was only half-joking. I really do want to see any and all lists on this subject (promoting Morse - the mode, not the test). The ARRL leadership has done very very little to promote the mode for many years - now all of a sudden there's this order to do so. Please understand that these comments come from a longtime member and QST reader who wants to help, not just take potshots. (I recently filled some holes in my QST collection - now I'm solid back to October, 1927. And those are just part of the N2EY radio library).

OK, here are some ideas:

- Bandplans: The ARRL has a "considerate operator's guide", but nowhere does it say where 5 wpm QSOs may be most easily found. The FISTS frequencies are not mentioned at all. This is easily fixed.

- QST: The magazine is often a new ham's first contact with the ARRL, and a resource for all hams. But when was the last time there was a QST article on any of the following?
   + How to learn the code & how to increase your speed
   + How to adjust a key and send good code
   + Types of keys and advantages/disadvantages of each
   + How to set up a CW station and operate it
   + How to build/buy a good CW setup on a slim budget
   + In-depth product reviews of various Morse training materials and methods
   + FISTS and other Morse-related organizations and resources

I've seen more QST articles on PSK31 in the past two years than articles on Morse in the past 20-30 years. Of course the new modes need to be promoted, but when decades go by with no attention to a popular mode, there's a problem. Newcomers do not have the ability to easily dig up articles from 30-40 years ago.

- Other ARRL publications: When I started out, there was an excellent ARRL book called "Understanding Amateur Radio". It cost half the price of a Handbook of the time, (first $2, then $2.50) and it addressed the basics of getting on the air. Some of it was reprints of QST articles that a newcomer would not have seen, but most of it was material intended to teach the basics without a lot of math. There were two versions, then it was dropped. Lots of projects but also lots of plain talk about setting up a station, operating, etc. Such a "junior Handbook" is needed now more than ever. In similar fashion, the fifty cent "Learning The Radiotelegraph Code" booklet needs a new version that doesn't cost too much. Of course the N0HFF book on the MEGS site is excellent, and it's FREE for the downloading. Maybe the ARRL could publish it?

ARRL Website: Some good info, but the list of Morse links is small and many of the best ones are notably absent or buried. Take a look at the Morse links at

http://www.callingcq.org

for some ideas. My favorites are the MEGS site (Morse Enthusiasts Group of Scotland), the AH0A site (for Morse University downloads), Dave Finley's (N1IRZ) explanation of the Koch/Farnsworth method, and of course the FISTS site. Did I find any of them from the ARRL website? Nope.

A link only costs the work to put it on the site, doesn't it?

- Things the BOD can do: It's interesting that the BOD changed the ARRL policy on S25.5 so quickly and so quietly, but that's a done deal. What bothers me is their inaction on further steps. For example, was an ARRL position on RM-10018 even discussed? To me that one is a nobrainer - just DO it! (Widen the "Novice CW bands" to General class size). Another idea is to replace the current mess of "subbands by license class" with "subbands by mode". Say, 35% Morse only, 15% digital, and 50% analog 'phone/image on each of the worldwide amateur only HF/MF ham bands. By law and by treaty, not just by "bandplan". Yes, 40 is a problem, but maybe it can be fixed AND the new subbands put in place at the same time. Why not? This is where the BOD can take the lead.

Learning and using Morse is neither difficult nor time consuming for most people IF the right methods are used. But a new or prospective ham looking at the ARRL website or QST will have a hard time getting info on how to go about it, even though such information is readily available if you know where to look.

And that's just my short list.

Dick Carroll <dixie@townsqr.com> wrote:
>I'm saying that no one should be allowed on the lower 25kc (actually anywhere on the CW segments) unless he has learned to work Morse code, and that knowledge tested at licensing.

I'd prefer less Federal regulation not more. Gentleman's agreements have served us well in the past. The lower parts of the bands have always been used mostly for DX and that continues through today. No regulations needed. Ragchewing generally takes place above the 25 KHz line, even the Extras...

>Nocoders mucking around in the CW segments doing what they should do with a code practice oscillator and W1AW code practice won't cut it.

The more CW signals heard, even slow speed code practice, the less likely the FCC will see the CW area as unused band space and move the phone line down the band...

> When FCC gets around to repartitioning the bands there should be a CW-only segment that requires a CW test to use.

CW use is decreasing as fast as the mortality tables now. Requiring a separate test just to use it would just nail the coffin shut that much faster...

>80 meters is probably the most underused band these days.

Agreed. Much less than even 10 years ago...

>go to 40 meters,

It's 10:51am here. There's not one signal to be heard on 40 meters.
And I'm in daytime range of Southern California. After the morning
skeds, about 10:00am to around 3:00pm daily 40 is usually dead. Not
band dead, ham dead. I sometimes set my keyer to repeat CQs and work
on other things in the background. Often I go 20 minutes without an
answer and finally give up. It wasn't that way even 10 years ago...

>even 30

I seldom used to use this band because it's deader than 40. That's why
when I moved I didn't bother to put up an antenna for it...

>or 20

This is where I make most of my daytime contacts. But even 20 is not
what it was in the past...

You were looking for an excuse...and nit-picked a single phrase for a "critique" that was not on the subject.

Apparently you don't want to believe that code-tested US radio amateurs are decreasing in number while non-code-tested US radio amateurs are increasing in number. That trend has been going on for years.

The "molehill" is getting bigger, bigger, bigger. The "mountain" is eroding faster and faster. Closing one's eyes or mind won't reverse any trend.

Waivers, Lennie. Waivers. When you have something to offer they want to use, they are glad to accomodate your needs.

Why should the "unnamed employer" be concerned over a Deja mail account, Lennie?

Nice try. Failed again.

Now back to your Geritol.

Three minutes of superficial detective work suggests the company
probably is:

Antec Corporation
11450 Technology Circle
Duluth, GA 30097
US

I see their stock is slipping since November when Bob Stanzione
announced a suspension in product shipments to their largest customer,
AT&T Broadband. Now trading around $10, after a high of $61.25 last

spring.

If that was ALL you posted, it might. But then again it doesn't
reflect the true CURRENT status of thier licneses, now does it?

No one here has "sleighted" me, Lennie, least of all you. You don't have the credentials nor the means to do so.

Be insulting and demeaning..?!?! THAT you can do. But you do that to EVERYONE, so I am hardly special or priviledged.

As for the usual "rank/status" comments, well, you go on thinking that, Lennie.

>>I may never completely master any one of them, but I will do my best

Since you are unable to accept culpability for your own lack of civility and your frequently repeated lies, I doubt that you will find anything I have to offer as it pertains to you as "civil"

Of course, you never acknowledge the "non-controversial" posts in kind...only the one's where you find the opportunity to reignite the flamewars.

>>No excuses as to why I didn't do it, other than I didn't do it.
>>No "elitists" holding me back, or failed excuses.

No...the main WHINE by a small subset of this newsgroup is about code retention/elimination. You are, as previously cited, it's center stage jester.

> A Brigade is 4 Battalions. A Battalion is 4 Companies. A

> horse-mobile tube transceivers or something?

I am sure you wish. Too bad for you they AREN'T using a technology you MIGHT be competent with. Time moved on...isn't it time YOU did?

Lennnie again attempts to narrow the scope of the numbers to ONLY
new licensees, and NOT the CURRENT status of those licensees.

Boohoo for Lennie. He's as transparent as glass.

I know you're not stupid, Len, so the only thing I can conclude about why you would say something which is totally inaccurate is because you're so mad at me that you can't think of anything logical to say. I never disputed your figures. You did.

I have no problem with the data. I was simply correcting your poor assessment of the data - as have others, albeit for differing reasons.

You just got done saying that his code speed made "no difference at all". Now that turns into "well, whether his code speed matters or not is a function of frequency." Evidently below .25 it's disasterous, and above .25 it's utterly inconsequential. I work above and below .25, and my radio works the same on either side of your demarcation line.

Yes, I did miss that. Did you mention it earlier in our correspondence? Pray tell where?

I never heard of anyone like that either. However, I think it would be more
accurate to say that most hams originally learned what each pattern of dits
and duhs meant before attempting to communicate with such an encoding scheme.

So your point is stated as being the availability of more communications
assets, but you don't think that anything other than retaining proficiency
testing for one of many many modes available to amateurs should be done
about it?

Do you think that retaining code testing is a good way to convince regulators that Amateur Radio has value as a real communications asset is the best way to do that? Can you cite any statements by any FCC staff that support your conclusion?

Why did you require that the poster support his contention that some new hams would be making contributions by citing news articles or media releases? If you don't even require a QST article to demonstrate a contribution, don't you think it a bit extreme that you will only accept proof that makes the news.

> As far as I'm concerned, you could have rested on your laurels permanently
> after publishing your first article, but you didn't. I wish we had

Yes, but I wasn't born this way, Larry; my first 2 decades as a ham (or as
an expired ham) contained no contributions whatsoever. And the
accomplishement I have done since then were NOT the result of the tests I
took. And I gotta' tell ya', Larry; when I was a 14 year old General, I was
as dumbed down as they come.

"QSL" as a synonym for "yes," or "message received" is very old, perhaps almost as old as amateur radio itself.

But "contact," meaning "I want to contact you" is quite new, less than a decade of commonplace use I think. I think it migrated to amateur radio from the Citizen's Band, though I don't know if it originated there, and I welcome corrections if I'm wrong. All I know for certain is that it was almost never heard on the HF amateur bands from 1968 (when I started listening) until the 1990s.

Personally, I feel that "contact" when used with that meaning is outside the amateur tradition and also outside good English usage, so I don't utilize it. The traditional amateur term is "break."

With all good wishes,

Kevin, WB4AIO.

(Rest snipped for brevity)

The above analysis is not correct.

The period being analyzed is April of 2000 to December of 2000. The relevant numbers are as follows:

April 2000
Total ARS: 678,539   Technicians: 205,857   All others: 472,682

December 2000
Total ARS: 682,240   Technicians: 218,989   All others: 463,251

This works out to the following changes:

Total ARS: +3,701   Technicians: +13,132   All others: -9,431

However, all is not as simple as it appears. As part of the restructuring changes, Technician Plus licenses will be renewed as Technicians. So the above apparent gain of 13,132 is inflated by such renewals, as is the apparent loss of 9,431 in the other classes.

Let's see how big this error really is. Looking at the renewal data on the Speroni site, we see that the number of Tech and Tech Plus renewals over the nine month period was 4,870. Because the FCC will not process renewals until the license is close to expiring, almost all of these 4,870 are Tech Pluses being renewed as Technicians. A fair estimate would be that about 4,700 of them were such renewals.

So the above numbers must be adjusted, because "Technicians" includes both code-tested and non-code-tested licensees. Doing the math, we get:

December 2000
Total ARS: 682,240   "noncodetested": 214,289 "codetested": 467,951

This works out to the following changes:

Total ARS: +3,701   "noncodetested": +8,432   "codetested": -4,731

Quite a difference from the earlier numbers, but it's still clear that the noncodetested numbers are growing while the codetested are shrinking. In round numbeers, the "noncodetested" are gaining at the rate of 937 per month and the "codetested" are shrinking at the rate of 525 per month.

But even THAT's not a complete or correct analysis.

All of the "codetested" licenses are, and have been, experiencing losses due to expirations - but none of the "noncodetested" licenses have expired. This situation will change in a week or so, however.

Suppose that the annual rate of expirations of "noncodetested" licenses is just 5%. Based on 215,000 licensees, that works out to 10,075 expirations per year, or about 840 per month. So the gain of 937 per month shrinks to just 97 per month IF a 5% annual dropout rate is correct.

In other words, the trend is not nearly so dramatic as was originally presented.

More important, however, is the simple fact that it is far too early to even guess at the long-term impact of the restructuring. It is also interesting that the January 2001 figures were not included. And it is to be expected that the easiest-to-get license will have large numbers of licensees.

A few years ago, my wife and I gave her teen-age kids $20 a week allowance.
The kids are 25 and 28 now.

If it really disturbs you, you can safely assume that any Technician
renewal from April thru January is actually a Tech Plus.  This crutch is
about to disappear however.

Clearly, Cecil believes that shoring up a mode that you believe cannot stand on its own by the artificial use of testing is welfare. Kind of like sending money to those who are unable to earn a living on their own.

The ARRL web-page survey (admittedly unscientific) says that you are off by about 2 orders of magnitude. The number of hams who report that their highest QSO was above the 70 cm band was 19.6%.

See:

http://www.arrl.org/survey.php3?pollnr=25

Ed:

A QRP CW signal usually won't get through in the same passband
being occupied by dozens of high-power phone signals. CW is an
extraordinarily robust mode, but it is not infallible.

Actually, no.  I can't discern the spaces between the letters/words;
it looks a lot like the way most CW being sent these days sounds --
run-together gibberish.  10-4, good buddy?  (I cleaned up the spelling,
sorry!)  Yep.  How appropriate!

Ed:

As well you should be. My own standard of what would be a significant "contribution" to the ARS would not come close to requiring the publication of an article in QST. Or 73, even! I'd settle for new hams that can read the owner's manuals that come with their off-the-shelf appliances, and can figure out for themselves how to store a PL tone in a memory channel, without needing someone else to show them which button to push, how long to hold it, and what to do afterwards. As far as I'm concerned, you could have rested on your laurels permanently after publishing your first article, but you didn't. I wish we had more hams like you, and no more of the kind we're getting with the dumbing-down of licensing requirements.

Ed:

I believe that what was in place prior to April 15, 2000 was just about perfect. I would have been quite willing to change that structure in accordance with my proposed structure stated in my comments to the FCC on the Restructuring NPRM: eliminate the Novice class, alter the written tests slightly, and give 100% of HF voice privileges to the 12/13 WPM Advanced class license, leaving the CW DX windows and the 1x2 and 2x1 callsigns as the only remaining incentives with a 20 WPM code test attached to them.

>>My question for you is -- what do you have against striving to
>>achieve a lofty goal?
>
>Do you see everything through the filter of striving, or a lack thereof?

An even better question would be why do you see nothing through such a "filter?" What in the bloody blue blazes is wrong with establishing and maintaining a set of reasonable requirements, geared toward obtaining practical communications skills, to be achieved in order to attain valuable operating privileges? Do you really think the clients of the Welfare State will flock to the ARRL en masse once the bar is dropped to the ground? The truth is, a lot of those foot draggers will trip over it anyway, so you may as well do what you want to do, and bury it totally! Then you'll have a perfectly level, politically correct playing field!

Jason:

Just as well; you can't use anything BUT CW in the 80-meter band
here in North America! BTW -- SSB *is* heavily distorted and/or
noise infested on all HF bands!

Not so at all. I agree with that statement, I don't agree that
anyone needs to be knowledgeable in the USE of morse
to be considered accomplished in the radio arts (be it
technically or on an operational basis). Indeed, for Dick's
claim to be valid one would then want to question why
engineering schools have never required even a working knowledge
of the morse code itself before graduating engineers.

>Why are we not
>surprised? Of course you wouldn't see any reason for anyone to be able
>to use it.

You misread once again. I see no reason to REQUIRE anyone
to be able to use it. I have absolutely no problem with anyone
using it as their personal choice.

> Poetic justice would be served if you were to find yourself in dire
>circumstances where your voice mode just couldn't quite cut the mustard,
>and you were left with nothing but a PTT to key as CW.....

A yes, the good old morse myth #27 once again. If the need
was of any consequence, then why doesn't the military
require it anymore?

Cheers,
Bill K2UNK

I have copies of some old first person accounts from survivors of the 1811-1812 series that lasted from Dec 16 through March. Several were major quakes at 8.0 or higher. That must have been quite a ride.

Earthquakes in the mid-Continent are not the localized
> (however severe) California type but cover vast areas. It is said that
> the big one in the early 19th century rang the church bells in Washington
> DC with aftershocks for months.

Yep, the underlying substructure throughout the Midwest and East is quite different from California. The Midwest was once an ocean floor and the limestone rock is deep and extends most everywhere. It carries the shock waves much more efficiently than the West Coast substructure. The 1811 New Madrid shake rang church bells in Boston and cracked chimney in DC and South Carolina.
BTW, I heard on TV a week or so ago that there was a 4.0, I believe it was, in New York City. Most people there don't know it, but they, too have a serious fault system and are at substantial seismic risk.

Should another New Madrid occur, you can
> write off St. Louis, Memphis, and pretty much everything in between.
>
> Two questions:
>
> 1. Dick, if you were involved in planning just what did the plan entail?
> How do you plan for Swampeast Missouri to essentially disappear?

It's not an easy one, fer sure. The conclusion was soon reached that there will be nothing in the affected region that could be depended upon to function as a normal asset, including any surviving critical personnel who would be faced with the same disaster conditions as everyone else, with their families, homes and pesonal affairs to attend to. So whatever relief happens will be assumed to come from the outside. Initial reports of what happend where, to whom and with what resulting needs and demands in what quantities will be crucial to timely dispatch of effective relief efforts. Frankly, the planning solution must be much more general than specific for those very reasons.

BTW, I read once that there are 100,000 masonary buildings in St.Louis that are earthqhuake risks. Seemed a high number to me, but there are still no codes for construction there that mandate sufficient hardening. Memphis is in even worse condition, that entire city is built on a mudflat several hundred feet deep which will liquify when the shaking starts, and what doesn't disintegrate will sink in the muck.

> 2. For numbers alone, the amateur service cannot be planned for in any
> disaster scenario. The history is that we fortuitously appear like the
> gnomes in the night.

Exactly. And the fact that hams are so widely dispersed throughout the populace, with stations which generally can easily be utilized apart from the normal unmbilicle of the gridded infrastructure makes them vitally obvious first/early response communications assets. The instant need post-event is what hams will be able to provide-the who, what, where, when, how much and why that is always the hanging question and without which no efficient, well planned response by relief columns can be intiated. Effective respoonse can be begun only after sufficient accurate information is received that can be worked up onto a set of opertional plans. Information is vital as to surviving roads, bridges, airport runways, hospitals- will field hospitals be needed, etc etc. LOTS of details surface. Of course agency information gathering overflights from outside will begin as soon as possible, but even these need preliminary information to work with.

> The most obvious is H&W traffic which sort of
> implies a National Traffic System if things are not going to turn into a
> cluster. What sort of shape is it in?

I'm not up to speed these days on much of this since I've been retired for nearly 7 years now, and am really out of the loop. I wasn't a bit unhappy to leave all that to another generation.
Maybe that's why I advocate not abandoning CW as an actual communications asset, kept as a backup for the times when other modes can't do the job.It's no big deal to switch from SSB to CW when needed if operators are capable, and there can always be an additional CW circuit set up if needed, that happens at times as a routine matter. Of course the first choice would be some good digital mode, maybe PACTOR, but the overhead needed is such that many hams who don't use it aren't equipped. It can't be depended upon tobe available when and where needed.
There is not a strict necessity to have a full CW practice net, at least for those who are familiar with traffic handling, and that's one thing I did a bunch in my years with MHP. It would be nice if most hams who see this as something beyond 'just a hobby' would get interested enough to work on that side of things a bit. And I DON'T mean only CW.

In Guatemala many years ago, the
> H&W traffic was flown into New Orleans on Pan Am and NTS from there.
> Still possible?

I'd expect so. For sure the Internet/email will play into any future such activity, but of course no one knows how it would be affected, either.

Good solution for the remaining amateurs in Guatemala had
> better things to do and a long-term working relationship with the Red
> Cross was put into use to do H&W. The question is whether anyone at any
> level has even the barest outline of a sketch to handle anything like
> this?

Again, I'm not current on the disaster relief comm. scene, but the last

I knew ARC had ham volunteers being sent on most every disaster team
package they sent out. I knew some hams from Springfield who went on
Hurricane Hugo.

There is no organization that is "the solution" more hams put thier
faith in the ARRL than any other organization and the ARRL threw it all
away,trampling the traditions of this once great pursuit one by one.TG

Yep, on your and my planet, Bill, but not on Dick's planet. Signals
from his planet takes 75 years to get here. That's why he thinks
they are still using nothing but Morse code.

And a single diode/cap will allow demodulation of an AM signal without
all the complex additional BFO electronics required for CW. :-)

That's what I like to do, Ed - deliberately reflect a mirror
image of the lunatic fringe with which I'm conversing. It's an
educational technique I learned during my education degree and
is supposed to slowly sink in and reveal the illogic being used
by the other side. It sinks in at an infinitesimally small rate
with Dick but I am a very patient person.

ED just what are you saying? I already know, and have known for a long time, how a digitized signal process works, where it samples an analog wave, digitizes it and later reconstitutes it as analog once again, sans noise. That's not new, nor is understanding the process equivalent to rocket science.

BUT--- if, like Cecil, you're telling me that Riley and his buddy Dale Hatfield insist that I and any serious percentage of ham radio licensees must become digital designers just to assure the survival of the ARS, you might as well go ahead and pass the word to them that they can begin the Big Shutdown anytime now. It ain't gonna happen. No such educational revolution is in the offing nor shall it ever be.

I for one am damn tired of being told what we "must" do to insure ham radio's survival, all the while the written tests are made dead-easy to pass without any effective learning of the material being absorbed by the entrant. And that's not just my opinion, rather dead on fact as evidenced by so many so clueless who aren't even bashful about admitting it publicly.

The whole situation looks more and more like a scheme to ease us out of our most commercially valuable spectrum segments, and that is something that I consider to be inevitable anyway. They WILL be taken from us as commercial demand for them reaches critical mass, as has always been done, and logically so. But with hams having become so dumbed down they'll have the perfect rejoinder to our protestations- "We told you if you'all didn't become rocket scientists you'd lose frequencies...."

Dick W0EX

I think he is right Dick. Incentive licensing did anger a lot of hams.
I was one of them. I remember talking to lots of hams who thought as I
did about the unfairness of removing privileges once granted. I
finally used a Bash book to memorize my way to an Advanced, but  I was
too lazy to get my speed up for the Extra. (I was not a CW buff at the
time.) Ironically now that I do work all CW, my Advanced is useless...

Unless you intend to leave out the lay people, it is unrealistic to believe that average hams can keep up with current technology to the extent that they can advance the state of the art, or be of any value to the military. And if they can't do those things, what good are they to the government (as they once were)...

>survival may also depend on the number of hams who say "***NO***!!!" to
>learning that new technology, too.

These non-technical hams just might save the hobby by providing emergency communications, something that is still valuable to the government...

>Riley Hollingsworth has been telling hams that we should not let Amateur
>Radio become obsolete under our watch.

Unfortunately Riley has been trying to get us to stop fighting amongst ourselves and to stop profaning the airwaves. Technical stuff seems to be a secondary problem for him these days..

In article <95sj9d$8co$2@208.206.142.95>, dixie@townsqr.com says...

> It's plain as day- you have no clue. You haven't had even a receiver on
>the ham bands lately, if ever.

I've heard enough. Most of it is weather reports, health problems, and/or "RIG HR IS..., ANT HR IS..." which I couldn't care any less about. DX is nothing more than a callsign and signal report exchange, with no meaningful conversations because so many other vultures want their precious wallpaper. If I'd want to turn a young person off to ham radio, all I have to do is turn my receiver on, and not say a word. The average QSO speaks for itself.

It reminds me of the government paying my uncle to build a lake
on his land. He used the lake to irrigate the corn the government
paid him not to plant.

No. As long as he doesn't get down below .25 and cause everyone down there to have to stumble over him.

Did you miss the point earlier? I can't see authorizing nocoders to work CW without any training in code whatver, and that's why. It's strange so many of you seem willing to overlook that.

 And I guess you're one of the clowns they're trying to recruit. Good
luck, to them-and you.

Not the point, nor should it be. The point is the availability of more communications assets.

Ah, so now because engineers aren't required to know Morse code is
reason enough for hams to not know it either. Pure logic, we see.

Maybe it's the winter season, but there is a lot of CW on these days. I don't know about the Novice segment, when I tune through there it's vacant, so I don't hang around.
Yes, I clearly remember the 40 meter novice band in the spring of '57. My old BC454, I think it was, heard most of them together at any dial setting, and from that experience I learned to dig a single signal out of the bedlam, a valuable skill that I still have to this day.

 Ok, so it did piss off a goodly number of hams. He said that was "all
it did" and that clearly is false. At the beginning of Incentive
Licensing there were around 4,000 Extra class hams. Ten years later
there were ten times that many.

BS, I was there too, remember? The big bitch was about the "donald
duck" sounding audio and the fact that rigs of the day drifted so much
that keepinga station tuned in was near impossible as compared to the
"broadcast quality"of AM and the absense of drift-caused problems.

> Progress happens. Time marches on. Ostriches bury their heads
> in the sands of time.

Forever things just got to keep moving, forever and ever, without even
a pause? Yeah, right. I do believe that was the common beliefd in Roman
days,too.

Now, let's back up in time to when the Generals *got* privileges they had
not worked for, when they were given phone privileges on 75 and 20 which
were formerly restricted to Class A operators. No exam, no
operating/license time restriction, no nothing - just fire up and operate.

Never seem to read much about that end of the stick, do we?

1952, I believe....... I've done quite a bit of research into the changes in Amateur licensing over the years... some big changes in 1924,1928, 1934, 1952,1967-69, 1990, 2000 (dates may not be 'right on' the money, but then many of the changes were phased in over a period of time.)

Hacker Crossed Police Wires
Suspect Arrested At Scene Of Ambulance Call
BURNSVILLE, Minn., 6:13 p.m. CST February 6, 2001 -- Police have pulled the plug on a police radio hacker.

Hacking Over And Out

Police said Tuesday that a 31-year-old ham radio operator in Burnsville has been broadcasting on police radios around the Twin Cities for nearly two years.

The suspect was spotted near the scene of an ambulance call Sunday. Authorities said that he might have been transmitting the call on their frequency from his
~~~~~~~~~~~~~~~~

car.

"Our frequency is aired over another frequency, thus severely hampering communications on both frequencies," Capt. Dan Johnson said.

Well good....then if I happen to see your name in there, I will just automatically delete it as an error. Thankfully, you are not the only person who may have occassion to send e mail.

Of course, I will have a pretty good clue as you would be only one of three people to send e mail written in crayon.

How did a half-breed simian-human hybrid  such as offbreed/inbred get a
computer?

You only started cyber-stalking me a couple years ago. I never heard of you until about 1998, so I didn't know I was supposed to come protect you from "virulent pro-coders" -- poor baby, I bet you were really traumatized. Splains a lot.

Was this really taught at a college-level course?

> It sinks in at an infinitesimally small rate with Dick but I am a very
patient person.

I have not seen a single example here where your college-learned technique
has changed the mind of anyone on whom you have used it. Have you actually
seen it work? You seem reasonably intelligent; perhaps you could choose a
technique that does not "slowly" sink in.

Is there any way we can tell whether you are deliberately using this
technique, as opposed to just being in your own lunatic fringe?

Do you remember the derogatory remarks about the "Single Sidewinders", the jamming, and the open hostility? I remember some of the hams at the time saying SSB was the work of the Devil and they would never use it. During every time of progress, there are always the lazy laggards.

Yep, and history proves it to be true every time. There's a book out now entitled, "The End of Time". It suggests that time doesn't even exist and all we are seeing is change.

Would you recommend a rules change that requires that hams are required to
have a specific number of communications assets available at their stations,
then? If that really is your goal, that would be a much more certain way of
accomplishing it. How many communications modes would you propose be
required?

I believe you, Larry, but I am curious -- how many was it? You made a
pretty power blanket condemnation of a group of people and I am just
wondering about your sample size.

Yep, it was a common educational technique in the early 60's. The
purpose was to expose the illogic of one side by adopting the same
illogic on the other side.

> Is there any way we can tell whether you are deliberately using this
> technique, as opposed to just being in your own lunatic fringe?

If it's not obvious, I usually provide a smiley face.

A single high-powered phone signal won't get through in a passband occupied by "dozens" of high-pass phone signals, either, Larry.

That doesn't prove anything. How many of those Extras weren't even licensed when the incentive licensing scheme was put into place? How many hams dropped out of ham radio altogether because the felt the ARRL screwed them?

Okay, as long as we all agree that we are discussing what "might" happen.

Did your comments or reply comments to the FCC suggest that a minimum code speed should be allowed in the lower 25 kHz of the band, or is that a new requirement you believe should be put on the plate?

Welcome back. You are correct that the shorthand Q-codes originated for CW but have also been used extensively on phone for at least the 30 years I've been licensed.

You may use "who is calling" if you wish...I prefer the shorter QRZ?

You may say "I have received/have you received my transmission"...but QSL is certainly shorter and easier...especially in a contest.

If the Q-codes offend your ears, don't use them...simple as that.

QSL??

I was listening to 80 meters last night. The only CW I heard was a pile-up on
3.505Mhz. There's a bit more activity during a contest, but I get bored with
those after about a half-hour.

A little weak on the details, isn't it? For example, not one mention of the suspect's name. I wonder if this guy was a real ham, or a guy they just tagged a ham because he used a radio.

No I did not. I was confident that there was enough common sense left
at FCC for them to know better than to do what they did. Silly me, I was
wrong.

Wake up, Ed. I'm saying that no one should be allowed on the lower 25kc
(actually anywhere on the CW segments) unless he has learned to work
Morse code, and that knowledge tested at licensing. Nocoders mucking
around in the CW segments doing what they should do with a code practice
oscillator and W1AW code practice won't cut it.

When FCC gets around to repartitioning the bands there should be a
CW-only segment that requires a CW test to use.

Digital should get its own segment, since digital and W do not mix that
well. And analog voice should get its own.

The same place that other slang comes from, Ed. Years ago, we had very different meanings for "cool," "gay," "bad," and a long list of other slang words used in our everyday language. Since everyday language continuously evolves, it is a little unrealistic to expect radio language to remain static. In fact, I'm fairly sure you were using some words four years ago that hams didn't use twenty years ago.

> [snip] After all, the rules for telephony
> state that we are to use plain language,

But for anyone who uses a ham radio, QSL is about as plain language as it gets. And, the last time I checked, "contact" was in the english dictionary.

There's always controversy on the bands, and today is no exception.
And I see there were trolls like you even in those days.

> During every time of progress, there are always the lazy laggards.

Much more factually, most hams don't wish to devote their passtime to
continually reinventing communications with the "mode of the week" sort
of nonsense seen in your circle. The fact is that history is littered
with "better ideas" that didn't make the cut. Humans are above all else
practical. If we have no pressing need for optimized highest throughput
methods with which to conduct our communications during times mostly
devoted to relaxed recreation, it does no good to browbeat us into your
personal point of view. Even if you really believe you've solved the
world's communications problems.
Evolution takes place at its own speed, and pushing and shoving does
nothing but help to impede it.

>

Yep, out of every several hundred or so inventions, one or two is
actually adopted as benefial and helpful to real live people, instead of
some company's bottom line thus the paychecks of their design engineers.

There's a book out now
> entitled, "The End of Time". It suggests that time doesn't even exist and
> all we are seeing is change.

Well OB you can invest your remaining *time* in attempting to make
time stand still so you can hope to garner more *time* for yourself.
I plan to use mine more constructively.

Come on, Ed, surely you know more about the ARS than that. The day when regulators can convince themselves that we have no value as a real operational communications asset is the day when our allocations are on the market for sure.

If what you say is true, then most everyone would see that and your
comments would be completely unnecessary.  But instead, you chose to
define scaleology as if you worked for the dept of weights and measures.

While I was in Korea or Guam, I recall hearing on the news that some
egghead predicted the New Madrid fault would jump again.
Meanwhile, Shirley MacClaine held hands with spiritual guides as they
looked to the East and focused on preventing the quake.

Good thing Dick was ready cause I don't have much faith in Shirley.

I missed the retirement announcement.  Congratulations Dave!

I miss the Air Force.  Many of the civilians I've worked around since
leaving the service care about nothing but themselves.  Its a wonder
we're even still the USA.

I don't see that the changes in either direction have been anything like "fast." If we factor out the Tech/Tech+ licencees, the number of General, Advanced, Extra and Novices have actually increased slightly since 1997. I don't see any significance to the percentages of increase or decrease of either the code-tested or non-code-tested hams. To date, the changes have been relatively minor.

What will tell, IMHO, is the attrition rate of the no-code Techs that come up for renewal soon. My speculation is that about 60% of them will not renew.

Lobster anyone? :-)

I don't think the number of hams who advance the state of the art has ever been
very high. But the number of hams today who have a fundamental grasp of modern
communications technology is smaller than it was in years past, IMHO.

The technical requirements for the old Advanced Class as well as the old Extra Class have been folded into the new Extra Class exam, thus reducing the number of tiotal questions and thus subjects that may be covered. There are no additional questions that are even at the level of the old Technician Class with regard to RF radiation hazard evaluation. No tables that refer to same are given to exam applicants.

Hans, are you a VE? have you had access to the present exams as well as former exams?
>
> Answer: None.

Answer: You speak out of ignorance and misinformation Hans. Perhaps you mean well and deserve to be excused but regardless you show your ignorance.

I dunno what your Morse speed is, but me thinks that whatever clocks your brain waves is probably kinda of slow.

Respectful 73,
Hams need MORE license classes.

We do not choose to be guardians of the gate,
but there is no one else.
  --Lyndon Baines Johnson (1964)--

Hams are totally responsible for the future of
Ham Radio. Not the ARRL; Not the FCC; But
Hams themselves. Unfortionatly the average
Ham is an old timer, unwilling to accept the
challenges of modern technologies, the cultural
changes of our nation, or the educational needs
of our people...He or she is only able to debate
the relative obsolence of Morse code.
 --w2ilp--

>> Radio become obsolete under our watch. What do you think he means by
>> that and why do you think he is saying that to his fellow hams?

> ED just what are you saying?

I asked first. :-) And Hollingsworth said it. What do you think he means?
Why do you think he is telling us that?

>I already know, and have known for a long
>time, how a digitized signal process works, where it samples an analog
>wave, digitizes it and later reconstitutes it as analog once again, sans
>noise.

How is it processed in between the digitizing and the D/A conversion? By what mechanism would the noise be removed?

>That's not new, nor is understanding the process equivalent to
>rocket science.

Do you think you could pass a multiple-choice test on this technology?

>BUT--- if, like Cecil, you're telling me that Riley and his buddy Dale
>Hatfield insist that I and any serious percentage of ham radio licensees
>must become digital designers just to assure the survival of the ARS,
>you might as well go ahead and pass the word to them that they can begin
>the Big Shutdown anytime now.

I don't recall iether of them saying any such thing. Can you supply a quote? They are both telling Amateur Radio, each in their own way, that Amateur Radio needs to modernize. Why do you think they are saying that? My interpretation is not that all hams need to become design engineers, but that hams should be making use of modern radio communications techniques within the Service.

I also believe that individual hams should have the same relative grasp of the communications techniques of today as our counterparts had in the 20s, 30s, 40s, 50s and 60s. In 1964, when I was a General, I was not the brightest ham in the Service, but if I had taken the covers off of a commercial transmitter of the day, I would have understood, at a block level, what I was seeing. How many hams can say that today? When Amateur Radio first came into official existence, it was virtually synonymous with the commercial radio of the day. Do you think it would have been permitted back after WW2 if it was not still relevant to the technology of the 1940s? can see many ways that the relevance of Amateur Radio to technology has been important to us over the years. I believe that such relevance is more important to us today than ever, with Amateur Radio facing spectrum pressures that are greater than ever before.

> I for one am damn tired of being told what we "must" do to insure ham
>radio's survival, all the while the written tests are made dead-easy to
>pass without any effective learning of the material being absorbed by
>the entrant. And that's not just my opinion, rather dead on fact as
>evidenced by so many so clueless who aren't even bashful about admitting
>it publicly.

I have seen one admit it publically on this forum, Dick. I agree that changes need to be made to the tests, but I disagree that they are as useless as you imply. They are certainly, IMHO, just as valuable as that 16-page General study guide I studied in 1964.

> The whole situation looks more and more like a scheme to ease us out of
>our most commercially valuable spectrum segments, and that is something
>that I consider to be inevitable anyway.
You may be right; I am sometimes amazed that Amateur Radio has fared so well over the past years. But I don't believe that the FCC is scheming to take our spectrum away; they would not need to do so -- they have that authority any time they believe that Amateur Radio is not making as good a use of spectrum as others might.

>They WILL be taken from us as commercial demand for them
> reaches critical mass, as has always been
>done, and logically so.

All amateur spectrum is shared, with our sharing partners ranging from the military to radiolocation to unlicensed users. The trick is in finding compatibile sharing partners.

> But with hams having become so dumbed down
>they'll have the perfect rejoinder to our protestations- "We told you
>if you'all didn't become rocket scientists you'd lose frequencies...."

Again, I would love to see that rocket scientist quote by the FCC. Can you provide it?

More seriously, I simply cannot understand how you can lament the "dumbing down" of amateur radio (what with people having to study a 1200 question pool instead of a 16-page study guide) and then turn around and say:

> I for one am damn tired of being told what we "must" do to insure ham
>radio's survival, ...

If you really do believe that the written exams are deficient, and I do, just not to the near-total extent that you do, I cannot imagine why you are not suggesting that it is important that hams continue to learn those things that would raise us to the standards that the FCC would like to see. What I see instead is a lot of very negative "can't do" talk that is having just the opposite effect.

Care to join me in trying to make things a little better?

Seems that they are doing just that, Dick. Where is the pause in the development of computer technology? Where is the pause in the development of non-amateur wireless technology? I don't see any.

What value would be found in having the Amateur Radio service pause while the rest of the world marches steadily onward? What harm could come of stopping in our tracks?

How about somewhere near 14.050 MHz?  The lower 25 kHz is often used as a DX
window and I prefer to honor the gentle agreements.

I would not have expected the FCC to make a new rule that all QSOs in the
lower 25 kHz of the band must be at a minimum speed. Why did you think they
would do that as part of their restructuring?

Is this another thing that "might" happen?

You can rest assured that it cannot happen until the FCC makes a rules change that permits it. Even then, I think it unlikely that many hams, if any, will get on CW manually unless they know Morse code. No-code Technicians have had the right to use Morse code on VHF since day 1 -- how many have you heard on 2 meters mucking around in the CW segments?

No-coders have been authorized to work CW without any testing for code whatver for about a decade now. What harm have they caused CW operators?

NOW YOU ARE SEEING THINGS MY WAY.

What do I propose to get out of this ancient worshiping rut?
I propose to technically make ham radio compatible with modern computer
science and practice...and for that to happen....

HAMS NEED MORE LICENSE CLASSES.

True ham radio can not be for everyone...BUT we don't want it to evolve
to be for no one.
By definition of Ham Radio, we can only refer to its OFFICIAL basis and
purpose, and thus to the exams which technically advanced hams of the
future may be required to pass.
Therefore I can't agree with your last statement, which denys the need
for more license classes. If you think logically about this matter,
you will find, as I have, that you are disagreeing with your own
previous observations.

Thank you for your comments and for reading my post anyway...BUT please
keep thinking.

73,
Bob Wex w2ilp (Insure License Potential)

I was surfing the web the other day when I ran across the lyrics of a song by Paul McCartney and Raoul Xemblinosky which was entitled "Roger Wiseman's Greyhound Men's Room Band." You can find the lyrics (which I think should not be published in a delicate family forum such as this one) at http://extra.newsguy.com/~shpxurnq/songs.html#song5.

Is this indeed *our* Roger. And how was it that he came to achieve such fame? That same web site claims that Roger was spanked off of Usenet entirely back in '97, but maybe it was someone else, because we all know that Roger is very much here, even though he's not all there.

Anyone care to enlighten us?

>if a large number of hams actually did. Ed?

I wasn't around then; my license expired in 1969 and I wasn't relicensed until about 1973 or so. I do recall reading (here, maybe) that a number of hams did quit the League over the whole deal. I am certain that they didn't all quit ham radio.

I think even then, postal regulations required a regular statement of circulation in QST. Your back issues should give at least a relative indication.

HF is not useless at all. As I tune outside the ham bands, I hear plenty of signals.

I think the real risk may be found in some of the broadband "wireless" networking that will be networking computers using residential phone wiring and electrical wiring, or providing broadband access over phone lines and even power lines. If Amateur Radio ever lost its primary status over these Part 15 users, it is over.

Yeah, but you know, Carl and I have had many an interesting conversation since and he is now using an entirely different style. I occasionally see some of his infamous "forcefulness," but I think he has chosen a productive route. I count Carl among my friends. Even bought him a lobster once. :-)

> Find one that you can show to be more basic and we'll look again.

The "prisoner tap code" could be OO keyed. It can probably be done at about 5 wpm with a lookup table by someone not experienced in Morse code decoding. That seems more basic to me. If you agree that it is more basic than OOK Morse code, will you now support IT as the mode that all hams should learn to be considered fully versed in radio technology?

As an unspecified digital mode using a permitted modulation method and a publicized encoding, it is probably legal.

You knew what Len meant.  If you say you didn't, then you're a bigger
fool than even you make yourself on here.

Not at all.  The programmer just needs to know where to look it up.  When my
programming requires me to know an ascii character, I open my programming book
to the correct appendix.

Over the past years, I have worked with a few dozen FCC staff, plus a few others from NTIA, OSHA and other agencies. They have been working relationships born of mutual respect and trust. Not once has one single of these individuals acted in a way that I felt was dishonorable.

I have a choice; I can go on that experience, or the fact that I cannot prove that your fanciful, albeit fearful, total distrust of the government. Thanks for the luck, but I will stick with what works for me.

So if I'm on here and you're on here, it's stalking? Splains a lot
about Hans as well. Hans is all about Hans, with a little delusion
twisted in for fun.

Reminds me of 10-10.  I worked a guy in Florida when I was stationed in
Nebraska.  Then I worked him again from Guam and he told me I was a
dupe.  When I tried working him from my new duty assignment in Illinois,
he kind of got perturbed with me.

Sounds like an excellent answer to have prepared for your next job interview, Ed. "Well I don't know anything about that, but I can look it up!"

>
> --

Sir,,

You are wrong on the above. Besides breaking the law and interfering with legitimate communications of other domestic radio services, the "skills" of "freebanders" hardly qualifies them for the promotion of the welfare of the community--among other things. If that were true, how come when there's a disaster (flood, tornado, hurricane, etc) they don't call on the "freebanders" to help out instead of ARES, RACES, the host of hams who are not in the above organizations, and Civil Air Patrol? How come they don't ask for "freebanders" to pass traffic on 27.555 instead of hams on 3872 KHZ, or 14.300? In time of disaster, when other comms are down, more traffic is passed by HAMS than any other group.

All this bullcrap about ham radio being "dead" is wishful thinking, bud. And for every "bad" ham that "may" be heard, I can find TEN CBers just as bad or worse. BUT! Does that make CB itself "bad"? NO! For every ten of the "bad" CBers, I can find 20 good ones. For every "one" of the so-called "bad" hams, I can find 100 good operators. The FCC's return to enforcement is welcomed by the rest of the Amateurs and, we hope, that their activity will weed out the bad ops. The rest of us that get smeared by the activities of a few welcome the departure of the jerks. Same with CB: you can't judge the entire service by the antics of a few morons.

Jerry

I didn't see any "correcting of a poor assessment of data."  All I saw
was your attempt at trying to make a new issue out of your
"correction" of the phrase "tipping the scales."

No, just giving code-tested versus non-code-tested license
class totals in the US ARS at the end of December of the
years 2000, 1999, and 1998.

I'll ask again, are you saying that already-code-tested license
class amateurs are switching over to the Technician class?   :-)

Please state exactly what was "inaccurate."  Do you dispute
my arithmetic on two groups of licensees?

Or aren't you just playing word games with the phrase "tipping
scales?"

Shall we all have fun with word games here?  Or would you
rather discuss some issues regarding the code-tested state
of US amateur radio license classes?

FCC databases are updated daily, weekly, and monthly. How
the various tabulators want to do it is their option. The AH0A
site tabulates at the end of the month.

What I did recently was take the AH0A site tabulations at the
end of December for the years 2000, 1999, and 1998. From
that and from previous years' data given over two years ago, the
trend is quite clear...newcomers are more attracted to no code
tests in US amateur radio.

Even more telling is that the code-tested license class totals
are decreasing while the non-code-tested licensees are
increasing.

What are you saying? That code-tested licensees are opting
to change over to Technician class from a code-tested previous
class not a Technician-Plus?   :-)

>(Rest snipped for brevity)
>
>The above analysis is not correct.

Sorry, Jim, but based on the conditions I stated, it is correct.

Since your arithmetic is the same as mine, my analysis
using the stated conditions is very correct. :-)

<snip>

>However, all is not as simple as it appears. As part of the
>restructuring changes, Technician Plus licenses will be renewed as
>Technicians. So the above apparent gain of 13,132 is inflated by such
>renewals, as is the apparent loss of 9,431 in the other classes.

That is an ESTIMATE. By using personal estimates based only
on "gut feeling" or something, you are yourself in ERROR.

<snip>

>But even THAT's not a complete or correct analysis.

True, using your estimates is not a correct analysis. :-)

<snip>

>Suppose that the annual rate of expirations of "noncodetested" licenses
>is just 5%. Based on 215,000 licensees, that works out to 10,075
>expirations per year, or about 840 per month. So the gain of 937 per
>month shrinks to just 97 per month IF a 5% annual dropout rate is
>correct.

As far as ESTIMATES, you've failed once more. Note the tabulation of NEW licensees which increased at 1184 per month for the 27 months between beginning of January 1998 and end of March 2000 for Technician. The renewals for those will be in the year 2008 to 2010...but the trend is for NEW Tech licensees still growing after January 2001.

You've made a wish-fulfillment estimate on the "840 per month Technician class expirations of 5 percent." That assumes that percentage will expire and you have NO idea if they will do that. New Technician class licensees are continually being added and not just from "Tech-Plus renewals."

>In other words, the trend is not nearly so dramatic as was originally
>presented.

Your statement is "true" only in using incomplete and faulty estimates. The trend is there whether you want to see it or not. Your take on "drama" is unknown.

>More important, however, is the simple fact that it is far too early to
>even guess at the long-term impact of the restructuring.

Denial will never see any trend of any kind.

> It is also
>interesting that the January 2001 figures were not included.

Why? Is 9 months after restructuring somehow "faulty" but 10 months after restructuring is somehow "more correct?!?"

What about the two years PRIOR to restructuring? Go do the figures again and see the trends. Here, I'll do it for you.

First three months of 2000: 163/month code-tested NEW licensees; 1980/month NEW Technicians. Not affected by April 15, 2000 restructuring.

All of year 1999: 196/month code-tested NEW licensees; 1165/month non-code-tested NEW Technicians. Not affected by April 15, 2000 restructuring.

All of year 1998: 265/month code-tested NEW licensees; 1231/month non-code-tested NEW Technicians. Not affected by April 15, 2000 restructuring.

> And it is
>to be expected that the easiest-to-get license will have large numbers
>of licensees.

The "easiest-to-get license" is a Restricted Radiotelephone
License or Permit from the FCC. No test, lifetime. I have no
idea of the number of those licenses or permits.   :-)

The name "Antec" appeared in message headers some months ago. No real "detective work" needed then, but it is surprising that a proud employee wouldn't name his employer. :-)

On the other hand, someone who sits around doing newsgroups and e-mail on company time might not want it known...

BTW, their company phone number is 678-473-2000 or
800-FIBER-ME. :-) www.antec.com

>> > And by the way, I AM doing both.

Both? The driving distance from Dunlap, TN, (FCC database address information) to Duluth, GA, is 3 hours, 17 minutes by legal speeds. Assuming a one-way driving time of 3 hours, work time of 8 hours with one hour lunch, the total commute and work takes 15 hours. That leaves 9 hours to sleep, eat at least one meal, do personal hygiene...and supposedly work at a second job.

One of those jobs must not be 8 hours long or both of them are
part-time. [drive 6 hours for a part-time job?!?!?]

Something missing in the above considering there are only
24 hours in a terrestrial day.

>> "Both what?" Spending company time chatting about personal

A novella is about 10,000 words in the publishing trade. I didn't
write that many words. Just some third-party references for my
claims for the last 45 years. Where are yours?

Don't try to bluff or play e-poker, here. Show your references
about non-amateur experience.

>> How does one get a commission as a member of a state

Digitize-scan those commission papters, block out your
private data if you wish, and post them somewhere. Or
provide some indisputable proof of this "commission" through
a third-party reference. Until then everyone has to assume
you are not telling the truth.

```

Here's the statement I was referring to:

"Apparently you don't want to believe that code-tested US radio
amateurs are decreasing in number while non-code-tested
US radio amateurs are increasing in number."

> Shall we all have fun with word games here?  Or would you
> rather discuss some issues regarding the code-tested state
> of US amateur radio license classes?

It would go a long way if you would just TRY to make less inflamatory
statements, Len.  You seem to feel the need to taunt, or exaggerate, or
belittle, or insult, in every stinkin' one of your posts.  That's all
this was about.  Geez.

Okay, just wondering. The reason is because we had an incident here a few years ago where the person was described in the local newspaper as a ham when in fact he was a just a guy using a marine radio (hey, it wasn't a CB, so that left only ham radio in the mind of the reporter).

> This guy has been at it for over a
> year, faking "officer down" calls,

Well, I don't know about the technically smart part, but he was an idiot for broadcasting false calls on the police frequencies. The police have enough to keep them busy, and I would sure hate to realise that a family member was put at risk because the cops were busy elsewhere with a false call.

The "taunt" seems to be 31,971 NEW no-code-test Technicians
who came into the US ARS in the 27 months from the
beginning of January 1998 and end of March 2000...while only
6009 NEW code-tested US ARS licensees came in during the
same time.

Is it an "exaggeration" that the no-code-test Technician class
has been constantly growing since the beginning while every
other US ARS class (code tested) has not grown nearly as fast?

Is it "belittling" that over 200 thousand no-code-test Techs are
now in the US ARS?

Is it "insulting" that such facts are pointed out to those who
have been code-tested?

I suppose you are right. All this talk about stopping code
testing is sure "stinking," isn't it?

I suppose I should "apologize" for pointing out the obvious, but
what are over 200 thousand Technician licensees expected to
do when they are discounted, demeaned, taunted, belittled by
some souls who feel they are "superior" to "stinking" inferiors?

T. L.:

Wrong again.  I could care less if they can beep at all -- as long as
they're not whining about learning how to beep in order to attain higher
HF privileges.  However, its a moot point now.  Pretty soon we'll have
the beepless ARS you've always dreamed about.

Tracy, you keep blurting about the ARRL is "trampling" the ARS. Yet
they still print the Amateur's Code in every Handbook, which most of you
OF's appear to have completely abandoned. You're sending mixed
messages.

Now explain yourself rather than just making accusations. Thanks.

Heck, for all we know it could be coming from the contact managers everyone has on their computers today. Or it could be coming from the business world. I've noticed a lot of business people saying that today - the word "contact" both as a question and statement (meaning "will you contact..." as a question or "yes, I'll contact..." when answered back). In other words, who knows where this stuff comes from.

Ain't that the truth. On my Hallicrafters S-53A, I swear I could hear *ALL*
the 40m Novice signals all at once.

No where in their prospectus does it identify Steve as an employee. Not that I care, either. I'm just glad if he says he has a job.

Are you still working for the buro of weights and measures?

Jones, nothing is what it was in the past, and for sure this media- the internet- has a lot to do with it. But weekend activity sounds as heavy as it ever was, from where I live.

There was a lot of that going on, and FCC with nudging from ARRL
introduced incentive licensing in a serious effort to change that. And
it clearly worked, until 1985. Now they've turned 180 degrees, and

you're right in the same basket with them.

I agree with your opinions, for the most part, but this is not
generally true: Heat as electron agitation only would hold
under certain circumstances, for example in a plasma of some kind.

Electrons almost always are in atoms, and thus they take on
discrete, quantized levels of energy which
are definite and not random.

Heat is usually defined as the degree of randomness of motion
of atoms.

An electric current can cause electrons to move in a medium by
jumping from atom to atom; this causes essentially random
motion in the atoms (say, in a resistor), and thus a rise in
temperature. Removing the electric field leaves the atoms

moving more randomly, but the electrons are not at all random
in the reference frame of the atom with which each one is
associated. If the atoms were not moving randomly, the
electrons would not be, either.

In a conductor, the electrons (in the conduction
band) hardly interact at all with any individual atom;
therefore, with an applied potential, they transfer
little random momentum to the atoms; therefore, they don't
heat it very much.

I don't know why that should be surprising. The technololgy of today is

far more complex than earlier days. To properly do DSP one needs to also
be familiar computer programming techniques. It must be a function of
the fact that you spend most of your time around hams who are also
highly technically trained, but you don't seem to be aware of how small
a percentage of hams are.

Yep. That has been my objection with Code Quick. To me, it would be fine
for learning code - up to about 8-10 wpm. I doubt if the extra level of
translation would work well at higher speeds.

It came from CB sidebanders back in the mid-70s or so. They wanted to talk like hams, but they didn't want to say "break" because it sounded too much like AM CBers, so they started that idiotic "contact" crap when they wanted to break in.

When I want to break in, I just give my call letters. It gets the job done, and saves time letting people know who's breaking in.

I must be doing something wrong, then. I work lotsa FISTS members, but the QSOs all turn into nice ragchews. Maybe we trade numbers, maybe we don't - they're all on the website anyway.

7058 is full of foreign 'phones nowadays, anyhow.

40 has been hopping recently - worked a Hungarian last night, and when I signed with him a KT4 that I last worked on Xmas Day called me to catch up. Nice chat - then when he and I signed, a UA3 called me. Pretty decent for a homebrew 100 watt CW transceiver and an inverted V at 35 feet, huh?

Now I'm gonna see what's going on tonight before bedtime.

There are lots of reasons why. One is the huge antennas ("huge", by the standards of those used to VHF/UHF and 10 meters) Another is the nightime nature of the band.
>
>>go to 40 meters,
>

Most of us are at work then. When we get home, there are a zillion things to do before thinking about radio. Gone are the days when Mom took care of the kids and the meals and the house and Dad could go on the air right after dinner. Getting on the air requires a block of time when you have some uninterrupted time and no pressing responsibilities. That's a rare commodity for most of us with houses and kids and two careers.

The last few nights 40 has been hopping. Just worked YL2SM - 589 both ways.
Sometimes it's hard to find a spot to call CQ between the low end and 7050 -
and that's with a receiver that has cascaded 8 pole 500 Hz filters.

It's the time of day and the MUF. Plus lifestyles.

I was around back then (Novice in 1967, Advanced in 1968, Extra in 1970). The moaning and whining by some who "lost privileges" was amazing.

But what was more amazing was how few folks knew the real story of how it all came about. The FCC wanted it, but the ARRL got the blame for it because the BOD didn't oppose it. Truth was, the FCC said it was gonna happen one way or another, so the BOD got them to tame the proposal somewhat.

For example, the FCC proposed demoting existing Advanceds to General, then creating a new "Amateur First Class" with a new written and 16 wpm code test (that would have made FOUR code tests!). Plus even more subbands and other gobbledygook. The ARRL talked them into dropping that one and letting the 40,000 or so existing Advanceds have more privileges.

Another deal was that the Extra CW band was going to become the lower 50 khz of 80/40/20/15, not just the lower 25. But the FCC quietly canceled that part in mid 1969, and it never went into effect.

And the whole thing was about hams not having enough technical knowledge, and turning into appliance operators. The code test thingie was the FCC's idea. In fact, the original 1963 ARRL BOD idea was simple: Bring back the pre-1953 system where you needed an Advanced to run phone on the ham bands between 2 and 28 MHz. (In other words, all HF phone except 160 and 10 meters).

Oddly enough, the numbers worked out exactly the opposite of what W2NSD and his ilk supposed.

From 1946 to 1963, the number of US hams more than quadrupled, from 60,000 to about a quarter million. The growth was steady until 1962, then all of a sudden it stopped dead. There were lots of reasons, which I won't go into here, but incentive licensing wasn't one of them. Incentive licensing was more than 5 years in the future at the beginning of 1963.

From 1963 until about 1970, the number of US hams held steady at around 250,000. Then, after incentive licensing was in effect, it started growing again. By 1979, 350,000 had been reached. Half a million US hams was reached just 5 years later. Over 600,000 by 1990 - BEFORE the Tech lost its code test. Go figure.

The hams of the time were split about evenly between supporting and opposing incentive licensing. A few left the ARRL and a few gave up ham radio completely - but only a few, and they were quickly replaced by newcomers. The ARRL BOD still feels the wrath of those times today, even though many of the present directors weren't even hams then. I don't think any of them were ARRL officials then, either.

--

Assuming an annual dropout rate of just 3%, only about 36% of those 1968 hams are still hams today - that's about 90,000. Works out to 13% of the 682,000 US hams licensed now.

I'm one of 'em. Sure doesn't seem like 34 years.

73 de Jim, N2EY

This isn't rocket science either, Ed. Where's the logic in expecting any substantial percentage of non-technical people, which is what the majority of hams are, to stay current on the intricacies of the latest digital communications techniques? Does it seem in any way likely to happen, when the vast majorithy of the newly licensed come from a one-day study-the-test session where all fee payers come away with a license? You really think any serious percentage of hams would have a clue about "block diagrams" when looking under the hood of an IC756? Most of the components these days are SMt and impossible to even identify visually even if you know what you're looking at, unless and until one has been to the "factory service school" on the particular piece of gear, and that as a professional technician!

Even old fellers like me, who spent the working career AND 44 year ham radio experience mostly in the technical side of radio find it beyond reasonable that it be demanded of us that we abandon what we know and like in favor of some dippy digital engineer's ideal of what radio communications should be today, just because he has found that he is capable of scrambling the numbers and inventing some new mode each week. In a word, much of it is BORING.

As I noted earlier, history is littered with "better idea"s that didn't make the cut. The good stuff, the things that attract people, has a way of staying around long past the tenure of many successive "improvements". Commercial communications has its objectives. They have diverged rather seriously from that of ham radio in the past decade or two. There is no valid reason why hams should be mandated to follow the same path when there is simply no need.

If the ham bands were clogged and overcrowded such that spectral efficiency (especially at HF) was an issue there would at least be some reason for it. That is simply NOT the case and as noted earlier. Especially at HF. Activity most of the time is reduced, no doubt by massive amounts of time previously devoted to on the air ham activities now spent on the Internet, as we are doing now. It's a case of "technology for its own sake". Not good enough. Many hams will simply abandon ship first. If I must give up what I find attractive in ham radio for all-digital radio communications, I'll just go internet full time. I know hams who have done exactly that.

In fact, this ongoing argument has reduced my interest in digital modes. I was an early packeteer, following even earlier RTTY activity, from an old MOdel 15 that stripped a fiber gear and was replaced a Commodore Vic 20 with a Microlog Air One module when that was the latest, long before IBM PCs came on the scene. All this constant haranguing about how we "MUST" has about got my disgust level up and my digital radio interest down.

Would you please to attempt to quote accurately? It's "gets through when other commonly available modes cannot".

> Is that true only if
> the other mode is not allowed to be used?

Well, I was in a weak-signal QSO when a PSK31 station came on the frequency exactly zero beat. You figure it out.

The prisoner tap code was never a radiocommunications mode, and was not
designed to be. Military men who needed to communicate over radio knew
enough to use Morse.

It's all he has ever done and is the reason most here just ignore him.
He had pretty well dried up for lact of attention when someone engaged
him in a drawnout flamefest, and he was rejuvenated.He is not interested
in ham radio in the least, other than to slam and criticize it and all
who are in it. He lives only to disturb and disrupt and like all such
idiots, when he gets no attention he goes away.

I don't think that either of those reasons would explain the reduced activity on 80 as compared to 10 years ago. My guess: One reason is the Internet. I have considerably reduced my on the air time because I play on this computer. I doubt that I am alone in this. Another possible reason might be that most of the 80 year olds I worked 10 years ago are no longer with us, and there are few 20 year olds to take their place.

>Most of us are at work then [9am - 3pm]...

And lots of us don't work then. Even before retirement I did lots of shift work so I was often on 40 during those afternoon hours. But for comparing now to then, likely as many hams worked then as now during those hours...

>Antennas may be part of the problem [why 30 is dead].

Sometime I wondered about that. But when I did find a QSO the signals were good each way, and we had the band completely to ourselves...

Not till nearly ten years later. He did his thing in the late 70's, and
it led directly to the adoption of the question pools and VE testing
system.

: around....HAHAHAHAHAHA!!!

What an amazing coincidence it is then! The several songs about "Roger
Wiseman" on http://extra.newsguy.com/~shpxurnq/songs.html mention
Marshall County, West Virginia (see "Hit the Road, Bucktoothed Choad").

Imagine that: Two Roger Wisemans in Marshall County, both of whom use
the same colorful language. Apparently, one of them was booted off
both alt.fan.karl-malden.nose and alt.flame some years ago.

Fancied himself to be a flamer, but got laughed at.

It seems that Raoul Xemblinosky wrote his songs in the same language Roger used
to commemorate that auspicious occasion.

```
But, hey:  You deny that songs like "Imagine #2" were written about you,
and who are we to question that?

Morse code was originally designed to be a wire communications mode, deciphered
by machine. It was adapted to radio use.

Exactly! And they weren't quiet about it, either.
>
>>And the whole thing was about hams not having enough technical knowledge,
>and
>>turning into appliance operators.
>
>And of course most hams today lack technical knowledge and are
>appliance operators...

Yup. The FCC did not understand what was really going on at the time at all. They still don't. I also think that the FCC was reacting to "Sputnik fever" (the whole incentive licensing thing started very quietly in 1958, right after the launch of Sputnik)
>
>>The growth was steady until 1962, then all of a sudden
>>it stopped dead. There were lots of reasons, which I won't go into here,
>
>What were the reasons?

Well, you asked, so here goes. Please keep in mind that there was no single dominant reason - there were a lot of little ones that all added up to the growth suddenly stopping.

- SSB: A few hams had been using SSB since 1933. Lots more started using it after 1948, when the phasing and low-cost filter methods were developed by folks like Mike Villard, W6QYT. By 1962, the introduction of easy-to-use gear primarily designed for SSB (S-line, KWM-2, TR-3, etc.) turned the tide and made SSB the most common voice mode on the HF ham bands. But this meant that SWLs could no longer easily listen in on ham QSOs, as they did in the AM days. Short wave listening was a major soiurce of new hams back then that was seriously reduced by the predominance of SSB. The cost and complexity of an SSB setup also had a negative effect on prospective hams by making it more expensive to get started on 'phone.

- FCC rules changes: In those days you had to live a certain distance from a quarterly FCC exam point in order to have the option of taking the Conditional test by mail instead of doing the General in front of an FCC examiner. In 1963 the distance requirement was increased from 75 miles to 175 miles, and the number of FCC exam points increased as well. Huge areas of the country that used to be "Conditional country" suddenly became General territory. This change meant that the investment of time and money to upgrade greatly increased because you couldn't go to old Joe across town for an exam at a convenient time - you had to make a trip of up to 175 miles "air line" to an FCC exam point that might only have exam sessions four times a year. Since a Novice back then was only good for a year and could not be renewed or retaken, this change greatly increased the dropout rate. To add insult to injury, the FCC started charging fees of $4 to take the exam (pass or fail). $4 was a bit of money back then to many people - about $20-25 in today's money.

- CB: 27 MHz CB had been introduced a few years earlier, but by 1963 the number of CBers was greater than the number of hams, and growing fast. The equipment was inexpensive, the antennas small and simple, and there was no test at all. Although licenses were required and there were strict regulations about the new service, many CBers simply ignored the rules and did as they pleased. Soon it was discovered that the FCC could not enforce the rules with any great degree of effectiveness. Many people who might have become hams went to CB instead.

- Cultural changes: Ham radio has always been a sort of "square" thing, to use a term of the day. Very few hams of '60s looked like John Lennon or even Austin Powers. Famous amateurs of the time were folks like Barry Goldwater, Curtis LeMay, Arthur Godfrey - hardly "flower children"! The emergence of the '60s "counterculture" drew lots of young people away from things like ham radio. Vietnam didn't help, either.

- TV and other media: TV watching increased all through the '50s and '60s. More stations were on the air more hours in more places, resulting in less time for ham radio. I remember seeing test patterns on TV as a young child, and there being only 3 TV stations in a major market like Philadelphia. I also recall many people in outlying areas like the New Jersey shore foregoing TV because it required a huge antenna to get a snowy picture. That all changed over time, mostly in the '60s. The internet and PCs have had a similar effect in the past 5-10 years.

- Economic conditions: For some reason, ham radio tends to grow more during periods of bad economic conditions than during good ones, with the single exception of the 1950s. The roaring 20s showed slow growth, while the Depression era produced a near-tripling of the number of US hams in less than 5 years. WW2 shut down ham radio for much of the '40s. The affluence of the '60s produced no growth while the stagflation and oil crises of the '70s and early '80s more than doubled the number of hams. When did the growth of the early '80s stop? About the time the stock market really took off. (When Clinton took office in 1992, the Dow was 3620)

And that's just the short list!

>
>>Then, after incentive licensing was in effect, it started growing again.
>
>Did Bash have anything to do with it... :-)

Probably a small effect. Many of the above causes reached "saturation" by 1970. For example, the FCC eventually dropped the fees and began giving license tests at hamfests and club meetings using traveling examiners. SSB became so entrenched that decent used first-generation gear became cheap. SWLs were replaced by scanner enthusiasts, who encountered ham radio by way of FM repeaters. CB lost its newness and got overcrowded. TV became commonplace and the quality of the shows sagged. The draft and Vietnam ended. Economic conditions got bad.

Waddya think?

It is not more difficult to understand the fundamentals of how it works than it
is to understand the fundamentals of AM, FM, SSB.

> To properly do DSP one needs to also be familiar computer programming
> techniques.

In 1963, I could not "do" an analog filter.  One does not need to be a
programmer to understand how DSP functions.

> It must be a function of the fact that you spend most of your time around

I am quite aware of the present technical status of hams, Dick; I spend about 2
or 3 hours a day on the phone, answering their questions.  Most of them don't
share your "can't do" viewpoint.

I agree that it is not intelligence; today's hams are probably, on the whole, a
bit smarter than we were.

I don't agree that the technology is so advanced that today's intelligent hams
cannot learn the fundamentals of how it works. I believe that it is a
chicken-and-egg sort of thing, with such techniques not in use in Amateur
Radio, so hams don't learn about them, making it less likely that they will be
in use in Amateur Radio.  The net effect, unfortunately, is that the rest of
the radio world is passing us by.

Sure. But the digital and analog voice modes are commonly available.

>> Is that true only if the other mode is not allowed to be used?

> Well, I was in a weak-signal QSO when a PSK31 station came on the

I can indeed figure it out. If that PSK-31 signal was more than about 30 Hz away from "zero beat," it went on just fine and the CW ops experienced QRM. Of those two commonly available modes, which one got through while the other did not?

CW has a necessary bandwidth of about 50 Hz. Go ahead, start calling CQ 51 Hz away from a CW QSO in progress and tell me the result.

Yeh, you keep saying that. So let us review.

Len brings up the fact that the numbers of coded hams are decreasing and
the numbers of non-coded hams are increasing (the "point" of the
discussion). He uses a balance scale term. You cannot comment on the
facts of the ham population, so instead dissect balance scale
engineering, and thus you claim Len's statements false. Ergo coded ham
populations are increasing. Nice fantasy.

Am I still in over my head?

>From: Dick Carroll dixie@townsqr.com

In an earlier post, Dicc Carroll writes:

> So who ever advocated stopping there???

and in this post, he answers his own question:

>Even old fellers like me, who spent the working career AND 44 year ham
>radio experience mostly in the technical side of radio find it beyond
>reasonable that it be demanded of us that we abandon what we know and
>like in favor of some dippy digital engineer's ideal of what radio
>communications should be today, just because he has found that he is
>capable of scrambling the numbers and inventing some new mode each week.
>In a word, much of it is BORING.

> As I noted earlier, history is littered with "better idea"s that didn't
>make the cut.

Modern radio techniques have very much made the cut, Dick; they are being used everywhere outside of Amateur Radio (and even a little bit within it).

Why do you resist learning new things?

> Commercial communications has its objectives. They have
>diverged rather seriously from that of ham radio in the past decade or
>two.

Yes, they have progressed while we have paused, to use your word from a previous post.

> There is no valid reason why hams should be mandated to follow the
>same path when there is simply no need.

If Amateur Radio were not in touch with the technology of the 40s, we would not be here after being shut down after WW2.

>If the ham bands were clogged and overcrowded such that spectral
>efficiency (especially at HF) was an issue there would at least be some
>reason for it.

It is not necessarily an issue of overcrowding, Dick; it is an issue of amateur radio being seen outside of our circles as being more than an anachronism. Ane the overcrowding issue can be part of it, too. In most urban areas, a ham who wants to put up a new repeater is told that "no pairs are available." Yet, tune the band, and most of the repeaters sit idle most of the time. This is not an efficient use of spectrum.

> If I must give up what I find attractive in ham
>radio for all-digital radio communications, I'll just go internet full
>time.

You must have me mixed up with someone else, Dick; I have never proposed ahtat you have to give up doing what you enjoy in ham radio. I am proposing that more hams learn the most fundamental components of modern radio technology. Unlike your view of your favorite mode, I am not proposing that you have to take a pass/fail test in these fundamentals to be licensed, although a few more questions about them would be nice.

I believe in the ability of hams to learn and grow. If more information is made available in amateur circles, they will come and they will learn and when such techniques come to be used in Amateur Radio, they will have an understanding of their advantages and disadvantages. Some hams will continue to thirst for radio knowledge, others will "pause," but as long as the Service as a whole continues to grow, we will have met the technical components of our regulatory objectives.

> In fact, this ongoing argument has reduced my interest in digital
>modes. ... All this constant haranguing about how we "MUST" has about
> got my disgust level up and my digital radio interest down.

Let me be perfectly clear, Dick; I do not believe that you "must." You are quite free to rest on your laurels and let others carry on, if that is your wish.

But imagine how some of the talk about "must" affects other hams, whose budding interest is being shot down just like yours -- with all this talk about "must" with respect to Morse code. I believe that if some folks were not telling them how Morse code is a big hill to climb to prove their character, more of them would sooner or later want to give the mode a whirl.

What day were you at HQ, Larry? I don't recall any memos that said "Larry is here; everybody go out of your way to honk him off."

Tell you what. Come back to HQ and I will personally give you a tour and introduce you to all of my friends at HQ.

Perhaps others here who have visited HQ can share their experiences, to confirm or contrast the bad one that you appear to have had.

Don't know, Len; unfortunately, I have enough to worry about inside the ham bands. VSDL, HomePhoneNetworking and HomePlug are just starting to take hold.

The upper part of 2.4 GHz is about to fill up with Part 15 devices, it would appear. It may be a lick-em or join-em issue, and we don't have a prayer of licking them. :-)

> They wanted to talk like hams, but they didn't want to say "break"
> because it sounded too much like AM CBers, so they started that idiotic
> "contact" crap when they wanted to break in.

In some contexts, it is more useful to break into a net in such a way that the reason for the break is announced at the time of breaking. On the SSB county hunters net, "last county contact" is often used to break NCS between running mobiles so that an individual mobile or portable station can ask for a minute to move a contact for a last county in a state off the net. Break is generally used to indicate a mobile who needs to run his/her county off frequency rather than wait on a long list to be run on the main frequency. I could imagine "contact" being a way of breaking an existing repeater, indicating that the breaker wanted to make a call to establish contact with another station not involved in the ongoing conversation.

>When I want to break in, I just give my call letters. It gets the job
>done, and saves time letting people know who's breaking in.

Contact gets the job done, and saves time letting people know the purpose of
the break. Either is legal under FCC rules.

Will the method of breaking into a repeater now join the importance of using
"name," "handle" or "personal" in the annals of what is important to modern
amateur radio?

Accorning to the way the FCC is "realigning" the licenses on
paper, so it would seem, but even an idiot like you knows better.

I think that if Len wanted to be inflamatory, he would have done a lot more
than complain about playing word games.

True. The elimination of high-speed code testing certainly didn't make the
cover of Time magazine.

> The "taunt" seems to be 31,971 NEW no-code-test Technicians who came into the US ARS in the 27 months from the beginning of January 1998 and end of March 2000...while only 6009 NEW code-tested US ARS licensees came in during the same time.

And again you try to make it appear that ONLY the "new" Technician licenses are making an impact. You fail to account for those who transition. You only refer to "new" code tested licensees. NOT those who are ALREADY licensed and upgrade.

> Is it "belittling" that over 200 thousand no-code-test Techs are now in the US ARS?

Only to you. Must chap your chops knowing there's all those teen and pre-teen ops out there able to do what you CAN'T do after your years aas a technician

> Is it "insulting" that such facts are pointed out to those who have been code-tested?

Only when YOU presume us to be ignorant enough to accept your poor math as "fact".

> I suppose I should "apologize" for pointing out the obvious, but what are over 200 thousand Technician licensees expected to do when they are discounted, demeaned, taunted, belittled by some souls who feel they are "superior" to "stinking" inferiors?

They are only those things in YOUR mind, Lennie. It's all you have left to believe that you are on some noble crusade.

Same place they were when offered to you in the first place...but rebuffed by AOL's "postmaster" as "this recipient is not accepting mail from your account".

So much for showing you anything. You ask for "proof" then close your eyes.

> Don't try to bluff or play e-poker, here. Show your references
> about non-amateur experience.

Did. You refused it. Oh well.

How's the State Adjutant General of the State of Tennessee. It's a matter of public record. Call them and ask.

> You sent this message at 1:38 PM EST according to the footer
> on this message. That is after normal lunch hours at WORK.

The operative word being "normal". And yes, it's a cushy job. I get paid an obscene wage for the easiest job I have ever had.

> Enjoy it while you can...before you get canned.

I am sure that would make you happy...AND give you more opportunity to spread your decitful and lecherous tripe completely unchecked.

Troll number two?

It doesn't matter which license class is inserted in the blank, Len.
You still can't make me believe that the balance scales are tipping
until any group of non-code tested hams exceeds the number of code
tested hams.  No scales have begun tipping so your original claim is,
like several others you have made, false.

Dave K8MN

I don't think anyone will dispute that statement. That is not the
statement you originally made, Windy--the one with scales tipping. It
is obvious that with an easy test available, most folks will opt for
that one initially.

So?

We could even come up with a new and radical assumption from all of
this: maybe some code tested hams are turning in their tickets and
obtaining non-code tested licenses. That could certainly account for
the increase on one hand and the decrease on the other.

Do you have anything interesting for the group or can we expect more
number crunching ala Len?

Very good, Lennie! All those days of retired bliss sitting in front of the 'puter paid off! It's only half right, but then you usually are.

> On the other hand, someone who sits around doing newsgroups and e-mail on company time might not want it known...

I am sure you will tell them!

I have no doubt taht a bit of fiber in your diet would go a long way towards changing your attitudes on life.

You can change that to "8515" if you have the intestinal fortitude to engage in a personal conversation. Knowing you for the coward you are, I'll just go on about my day.

Past events would indicate that you don't have that fortitude. Not even to say "I am busy right now". However you then have great fun creating fictional events SUBSEQUENT to that. You always do.

And by the way, we are a subsidiary of Antec, "Electronic System Products". Bob's stock problems are his own, thankfully.

You, of course assume that non-code tested licensees will never upgrade.
What is this rate of change supposed to mean to us, Len? Why all this
"mountain eroding" and "scales tipping" guff? It would appear to be
something which is natural given the current licensing structure and it
certainly doesn't worry me. Why should it worry you, a non-licensee?
I don't think those scales will tip in your lifetime. Would you like
one of us to give you a report in the afterlife? Please provide a
forwarding address.

His statement, taken as a whole, was false because of his incorrect analogy. When Len can carry on a dialog without inserting all of the silly phrases such as the obviously wrong one which he used, maybe someone will take him seriously. Just maybe.

When viewed as an obvious troll meant to stir things up rather than to really discuss anything, Len's post has little meaning. Len isn't a ham so he isn't contributing to eroding mountains or tipping scales one way or the other. He knows a few hams though.

Your own role here is an interesting one. For several years I've had the opportunity to observe you playing defender for the likes of Len, Cecil and Carl Stevenson. If you'd like to continue with analogies, I'd describe your perception of amateur radio reality with a term from ionospheric propagation: skewed path.

By the way, Lennie and others, it has been on my "bio" page of QRZ
for some time, along with the call sign of the club call sign for the
company.

C'est le vie.

I wouldn't give what 2-Belo says any credence, from the "Alt.flame
Who's Who":

"This idiot came out of nowhere in late 1996 posting from
Japan, following up every cascade in existence, until he was deemed
irritating enough to reply to. Quickly jumped on the Meow bandwagon,
hiding in alt.fan.karl-malden.nose." --flamefaq@feedME.

  "Sad little dog (er...cat) who begs to be led around by a leash. Has
had
about the same amount of free thought this decade as Ronald Reagan.
Needs
someone to lead him and tell him what to do (also not unlike Ronald
Reagan)."
--The Cypher

  "The 2-Belo always has something to say; to anyone, about anything.
Very
rarely will it make sense. Almost never will it be worth reading. On

the odd
occasion, when the planets align, it may provide the odd chuckle.
Otherwise,
I wish the 2-Belo did get fired. Would finally shut-up. Would at last
leave
a cascade without molesting it. Would, well, be gone." -- Strawberry.
  "A balding, vicious little bastard pissed off at the world due to his
enslavement in the land of the Rising Sun. Has made it his mission to
punish
a dot f because he has to pay $75.00 US for a single fucking grape in
Japan.
His one saving grace is his sense of humour. He _knows_ he's a short,
balding fuckhead. But the dwarf can flame." -- Scott Campbell.

  "Skittish and awkward like a colt on coke, this autistic child
prostitute
hides behind the sympathy generated by the gastrointestinal disease
that
bears his name. Boyd's Disease, characterized by the projectile
expulsion
of a curdlike, smelly discharge, forces him to leave the keyboard every
ten
minutes for an enema. This explains his sporadic and halfhearted proof-
reading." -- Blub.

Yep. And when the first radio experimenters began to develop the fledgling RF communications system they very quickly realized that Morse was a natural for use with a system where the most basic requirements were simply to key a carrier on and off with information encoded in those bits of RF....
It WAS a natural. Still is.

Sure is; I use it for almost all of my hamming, and it certainly is the most enjoyable. It is very useful to Amateur Radio. The difference in our opinions is that I believe that its usefulness is enough that hams will use it whether they are required to learn it to get their licenses. I also believe that hams will not get on the air and use it unless they know the code (unless they use a TNC or other computer encoding/decoding scheme).

The Extra Class license is still required to obtain all amateur priveleges. The number of steps required to get there have been reduced, with each step being more difficult than it was before. The Technician with HF endorsement is now the entry-level HF license -- how much harder is is than the Novice used to be? Is this your idea of a 180-degree phase shift?

I have said often that I believe that amateurs need to learn more about modern radio technology; you have disagreed with me. Just what basket are you saying I am in?

How do you feel about those that have learned how to send and receive Morse code, but believe that changes need to be made in the way Morse code is tested?

> However, its a moot point now. Pretty soon we'll have the beepless ARS
you've always dreamed about.

I do not believe that Morse code use will end any time soon, Larry. Do you feel that the mode has so little value to ham radio that no one will learn it and use it unless it is tested? I disagree; all of the other modes have avid proponents without such testing. I do not agree with you that those modes that use code are the bottom of the pile.

I don't know if I dare to make another lobster bet with you! :-) At least a
60% chance I will be at Ft Tuthill, though.

But I do deserve a chance to break even, so here's the deal: In the first 3
full months of the time period where no-code Tech license, I think that more
than 60% of those Technician licencees eligibile to renew will not do so. If
the percentage that renews is >40%, you will win. In very unlikely event it
is precisely 60.000%, we each buy a lottery ticket and go dutch treat on
the lobster. :-)

What say?

Maybe it should be based on the size of the lobster. 5% = 1 lb, 10% = 2
lb...

Jon

Exactly. All sorts of rumors and hearsay flew around back then. Most of
it was false or distorted.

Why do you insist on dodging my point? Would it destroy your most
effective weapon, your assertion that I actually DO resist learning new
things?

What I said is that I have tried almost every new mode that came along
and for the most part they are BORING! And yes, I "learned" new things
about them, contrary to your assertion. Sure modern techniques have made
the cut.
I use them every time I turn on a rug. But I gotta tell ya, I prefer the
old crystal filter to anything DSP has offered to date. I'm on my fourth
DSP and so far I see nothing but disappointment from any of them. I also
have a little audio autonotch filter that has had much more use against
the carriers of the many RF spammer/jammers that all this infusion of
'new blood' has brought.

> > Commercial communications has its objectives. They have

Really? Maybe you have paused, but I don't think that Icom and Kenwood
ant others would be cranking this stuff out by the shipload if hams
weren't buying, do you? If I still used the old homebrew 6ag7/807 rig
and BC454 receiver you might have a point. But the continued assertion
by all the folk who have such vested interest in "progress" for its own
sake is getting to be just as boring as the constant glowing raves over
DSP.

Dodging the issue? Why so all you "we all just gotta change everything"
mavens ignore the fact that we hams do this not because we want to just
communicate- we have cell phones for that- but for much deeper and more
complex reasons.
>

> radio being seen outside of our circles as being more than an anachronism.

Evidently FCC and most of the others who seem to be monitoring our
every teansmission to see what old mode we insist on keeping can't see
the forest for all the trees.

Ane
> the overcrowding issue can be part of it, too.

I clearly remember the days when that was indeed a factor, when 75 meter
voice band was one big series of heterodynes. Sure, the move to SSB was
definitely justified to relieve that. There is today no such problem,
nor anything even remotely approaching the congestion of the 50's and
60's.

In most urban areas, a ham who
> wants to put up a new repeater is told that "no pairs are available." Yet,
> tune the band, and most of the repeaters sit idle most of the time. This is not
> an efficient use of spectrum.

It sure isn't, but that is not a technical problem, rather one of
administration that could very easily be resolved. The fact that all
paris are "assigned" is the problem. You just have to offend those who
need to be offended since they are too selfcentered to do the right
thing themselves. No one should have the inherent right to tie up a
frequency pair just because he asked first. It should be a use it or

lose it situation. Repeaters should only rarely be approved for
individuals where they can preclude many other potential users from use
of spectrum, the rule should be 'show your real data or be denied'. It's
a failure if administration that the repeater fiasco is allowed to
continue as it has.

> you have to give up doing what you enjoy in ham radio. I am proposing that more
> hams learn the most fundamental components of modern radio technology.

Unlike
> your view of your favorite mode,

You don't even understand that CW is NOT my favorite mode, although it
is one of my favorites. From long experience I know how effective it can
be. If operators equip themselves to use it. You don't seem to yet
understand- or do you just prefer to ignore- that my outlook is that it
is just as irresponsible of ham radio operators to refuse to learn to
use CW, the basic radiocommunications mode as you believe it to be for
them to ignore DSP techniquues. It is also irresponsible for ARRL and
FCC to ignore the most basic radiocommunications mode. Do they all think
that there will never again be any need for anything basic?

> I am not proposing that you have to take a
> pass/fail test in these fundamentals to be licensed,

Well that's appropriate since you don't have to learn enough to pass a
test on them to be able to use them. With the only code test at 5wpm
there is no valid rationale whatever for avoiding learning Morse code.
Even if you don't intend to use it. Many hams -even most- learned it who
never intended to again touch a key and along the way discovered that it
was very different than expected, and many became advocates of the mode.
I was one.

> although a few more
> questions about them would be nice.

Ah, yes, gotta fill up those question pools, whether or not anyone learns from their afternoon cram class before the test.

Check this posting .....I changed a few names and callsigns to keep the guilty from protesting.

The -xx- County Repeater Association and -xx- County ARES (Amateur Radio Emergency Service)are again pleased to announce a free Technician License Class.

Participants attending the free one-day class will be prepared to take the 35 question test required to obtain the entry level Technician Class license.

The class consists of video, Power Point, lecture and live demonstrations of SSB, CW and many digital modes. We have a success rate of about 70% of our students getting licenced. No book or other material is required for the class except pencil and paper. There will NOT be a testing session after the class.

Saturday March xx, 2001 8:30 to 5:00 -xx- County Government Annex At the Corner of ---------xx-------, xx xx214 Upstairs in Room xxx For information on the class: e-mail xx5xxx@arrl.net Talk-in on 145.xxx - 1xx Hz PL

There it is... So you might as well send them a full course in the latest digital modes, I'm sure they will absorb it just as well.

>
> I believe in the ability of hams to learn and grow. If more information is made available in amateur circles, they will come and they will learn and when such techniques come to be used in Amateur Radio, they will have an understanding of their advantages and disadvantages. Some hams will continue to thirst for radio knowledge, others will "pause," but as long as the Service as a whole continues to grow, we will have met the technical components of our regulatory objectives.

Taking lessons from Cecil? Your use of "pause" to indicate refusal to learn is way out of context and you know it or should. Knowledge, is not the issue, rather the contined assertion that "we all gotta move on to the latest digi gadgetry or we'll stagnate" BS is the issue. We HAVE moved on, and not all of it has been beneficial other than to the bottom lines of manufacturers and retailers. And maybe the ARRL.

I truly believe, indeed KNOW that this continued incessant demamding has caused many hams to abandon ham radio, just quit. I know some who have done it. They heard all of the nonsense they wanted to hear, and moved on to pursuits where less trivial drivel is involved. If you want hams new or old to learn new you need to show some actual benefit of that learning. Basics of new techniques, to the extent that they can be learned by non-technical persons are certainly appropriate. Strangely they are absent from the question pools for the most part. And for sure no one is about to learn anything serious by just associating an answser to a question, nor by attending a one-day "guaranteed" tech license cram cursse. But you're welcome to keep on talking about it, as you wish.

>
> > In fact, this ongoing argument has reduced my interest in digital
> >modes. ... All this constant haranguing about how we "MUST" has about
> > got my disgust level up and my digital radio interest down.
>
> Let me be perfectly clear, Dick; I do not believe that you "must." You are quite free to rest on your laurels and let others carry on, if that is your wish.

You ARE taking your cues from Cecil. I rest on my laurals as a ham simply in that there are no more ham radio tests for me to take, the last one was over thirty years ago. If you believe that I haven't learnd anything since that time I'll just lump you in with Cecil, and surely you don't want to be there.

>
> But imagine how some of the talk about "must" affects other hams, whose budding interest is being shot down just like yours -- with all this talk about "must" with respect to Morse code.

If a few of you CW lovers whose real beliefs were not trumped by Politically Correct demands foisted on you by a few geeks with an Agenda would instead just simply state the facts--- that any ham who overlooks learning Morse code is missing the very most basic radiocommunications mode yet devised, and instead urge all hams to learn it as a matter of course, none of this would be necessary. Instead you cower like so many sheep.

> I believe that if some folks were not telling them
> how Morse code is a big hill to climb

You've got it backwards, again. It is not nearly as hard as they first think it is, when they decide they just don't want to, and that has been the point. Why do you contradict it?

>to prove their character, more of > them would sooner or later want to give >the mode a whirl.

Based on knowledge of how things have worked in the past that is most unlikely. No one excapt a few of us posting here has a single good word to say about it. Extremely few newcomers are informed and with the current attitude at HQ and by all the ridicule and criticism it and its supporters get here there's not much chance of improvement. The Big Dumb Down will just continue until the Big Shutdown.

So smirk, smirk. the PSk31 station requies many thousands of active
devices plus all the cabling, setup and crossed fingers required to get
it running.

CW? well, you already know.......

Naw, you didn't figure it out at all. I was in QSO when the PSker
landed on top of us and flailed away, clueless.

More to the point, he was doubtless running at minimum a pentium with a
million or so active devices, AND some sort of an elaboirate SSB
transciever. I on the other hand was (or easily could have been) running
my Tuna Tin Deuce and a single stage regen. So now who has the
efficiency edge?

No, Len, it is not correct. Let's look at what you wrote:

"In the 9 months following US amateur radio restructuring, the total
number of US amateur radio licenses increased by 3,701 (+0.55% of
total)."

That part is correct. Subtract the total number of licenses in December
2000 from the total in April 2000 and you get a difference of 3701.

"Code-tested licensees declined by 9,531 while non-code-tested licensees increased by 13,132."

That part is NOT correct. First off, there's a minor arithmetic error (9431 not 9531). But the big mistake is that you equate "non-code-tested licensees" with "Technicians". The two are not the same. Some holders of Technician licenses are code-tested, and have some HF privileges.

You wrote "licensees" not "licenses", too. So you were referring to the people, not their licenses.
>
> Since your arithmetic is the same as mine, my analysis
> using the stated conditions is very correct. :-)

Your arithmetic contains a small error. And your analysis is flawed and in error, as I have shown.

> >4,870 are Tech Pluses being renewed as Technicians. A fair estimate
> >would be that about 4,700 of them were such renewals.
>
> That is an ESTIMATE.

Yes, it is. It's also true - the FCC renewed 4,870 Technician and Technician Plus licenses in that time period, and reclassified the Tech Pluses as Technicians. The holders of the licenses - the licensees - are responsible for maintaining proof that they have been code tested if they want to retain their HF privileges.

This stuff is all explained on the Speroni site. Your failure to include it in your analysis is a serious error that reduces your credibility.

> By using personal estimates based only
> on "gut feeling" or something, you are yourself in ERROR.

My estimate is not based on "gut feeling". It is based on a thorough knowledge of the information, the applicable regulations and basic math as applied to statistics. It's a fair estimate.

Your analysis did not include the fact that the FCC is renewing Tech Plus licenses as Technicians, and that by doing so, one cannot equate "Technician license" with "non-code-tested licensee". By improperly putting code-tested Technicians in the non-code-tested category, you overstate their number and understate the number of code tested licensees.

The error is not a small one. 4,700 of 13,000+ is more than a third.

If there is any error in my analysis, it is that the number 4,700 is too small. Also left out are all Technicians who have passed the 5 wpm code test but not upgraded to General or Extra yet. They are "code-tested licensees".

End result is that your numbers are way off.
>
>   <snip>
>
> >But even THAT's not a complete or correct analysis.
>

It is far more correct than your analysis.
>

>
> As far as ESTIMATES, you've failed once more.

How do you know? What is faulty in my estimate? I clearly said "SUPPOSE" - that makes it hypothetical.

> Note the
> tabulation of NEW licensees which increased at 1184 per
> month for the 27 months between beginning of January 1998
> and end of March 2000 for Technician.

The actual numbers jump all over the place from month to month. And the tabulation is of new licenses, not new licensees.

The number of new Technician licenses proves one thing: Most people starting out in ham radio do so by getting a Technician license. The data does not tell how many of those new licensees later upgrade, because upgrades are lumped into "modifications".

> The renewals for
> those will be in the year 2008 to 2010...

Which has no bearing on the analysis. What really matters is how many will come up for renewal, and be renewed, in the near future. My hope is that the renewal rate will be very high. 99% would be great. 100% would be even better, but is probably not realistic.

> but the trend is for
> NEW Tech licensees still growing after January 2001.

That's an ESTIMATE on your part. Nobody knows what the renewal rate will be like until they actually start to expire.

>
> You've made a wish-fulfillment estimate on the "840 per month
> Technician class expirations of 5 percent."

That's simply not correct. I don't "wish" for a 5% dropout rate - I "wish" it would be 0%. The 5% is just a highly-educated guess, and identified as such.

By ignoring the fact that no Technician licenses have expired yet, your analysis is even more faulty. My estimate is closer to the facts than yours because it includes relevant corrections. My method is simply more accurate.

> That assumes that
> percentage will expire and you have NO idea if they will do that.

It was identified as a "suppose". You ignored the whole expiration thing completely. My analysis is more correct because the relevant factors are included, and estimates identified as such.

You have no idea how many will expire and how many will renew, either.

> New Technician class licensees are continually being added
> and not just from "Tech-Plus renewals."

Of course! No one denies that, least of all me. But as I have shown, at least a third of the ones you have credited as "new non-code-tested licensees" are actually code-tested Tech Pluses renewed as Techs. The real number is probably close to 40%. That's a BIG error, Len. And it's an avoidable error.

>
> >In other words, the trend is not nearly so dramatic as was originally
> >presented.
>
> Your statement is "true" only in using incomplete and faulty
> estimates.

My estimates are accurate within the limits stated. My analysis is more accurate than yours. Much more accurate.

> The trend is there whether you want to see it or
> not.

The trend is that most new hams start out with Technician licenses. That's been the trend for over a decade. Some upgrade, some don't. Describing all Technicians as "non-code-tested licensees" is simply not correct or accurate.

> >More important, however, is the simple fact that it is far too early
to
> >even guess at the long-term impact of the restructuring.
>
> Denial will never see any trend of any kind.

I'm not denying any trends. I'm just stating the facts and pointing out your errors. Which of my facts is not true?
>
> > It is also
> >interesting that the January 2001 figures were not included.
>
> Why? Is 9 months after restructuring somehow "faulty" but
> 10 months after restructuring is somehow "more correct?!?"

10 months of data are available, so why not include them? The longer the baseline, the more accurate the extrapolation or interpolation.

Basing conclusions on the 10 months of data following the restructuring is, by definition, more accurate and correct than basing them on the 9 months of data following the restructuring.
>
> What about the two years PRIOR to restructuring?

Different ballgame. Different license structure, different test requirements, different dynamics. And the FCC was renewing Tech Pluses as Tech Pluses back then.

> Go do
> the figures again and see the trends.

I have. The trends changed markedly after April 2000.

>Here, I'll do it for you.

Will this be as accurate as your earlier analysis? ;-)
>
> First three months of 2000: 163/month code-tested NEW

> 1231/month non-code-tested NEW Technicians. Not

> affected by April 15, 2000 restructuring.

Which tells us that most new hams start out with the Technician
license - as I have written many times. Upgrades are not shown as new
licenses in the Speroni data. Upgrades are not shown separately in the
Speroni data, either.

And the restructuring DID have an effect. Once the NPRM was announced,
hams and prospective hams who kept up with the news knew that changes
were probably coming. Some of them would act accordingly, perhaps
delaying upgrading until the new license structure was known. After the
late December 1999 R&O, those thinking about getting licenses or
upgrading knew what was on the way and acted accordingly. The exact
effects can only be guessed at, but there WERE effects.

What do you think the above data says in terms of trends, beyond the
fact that most new hams today start out as Technicians?
>
> > And it is
> >to be expected that the easiest-to-get license will have large
numbers
> >of licensees.
>
> The "easiest-to-get license" is a Restricted Radiotelephone
> License or Permit from the FCC.

Sorry, I made a mistake there. It should read:

"And it is to be expected that the easiest-to-get US amateur radio
license will have large numbers of licensees."

That's better. I apologize for being vague in that statement the first
time.

Understanding the fundamentals is far from "We all gotta adopt the latest yada yada yada" crap that is the Cecilian hue and cry, and to which you clearly subscribe.

Really? So what're they doing on the phone asking you simple questions? Kindly refrain from misrepresenting my viewpoint if you please. *I* DID. "They" seem to resist any such activity, preferring to have "Ed do it"

```
for them.

Your lack of reading comprehension is showing, Dick. Both Ed and I
encourage all hams to learn Morse code and use the CW mode which is
useful and fun for some. We will continue to encourage all hams to do
so even after the Morse code testing requirement is dropped entirely.

Yep, CW requires many billions of active devices called brain cells
plus many hours of specialized training. Thousands VS billions plus
a short learning curve sounds like a fair trade to me, Dick. If you
don't believe in labor savings devices, why don't you ride a horse?

DSP is to ham radio now as SSB was to ham radio in the early 50s.

Undersampling, what else? It us reconstructed from samples with most of the original and the noise absent.

Sure, they both said "Hey you dumbass hams better get your rears in gear and get off that old mundane stuff, you're not doing our engineers nor the rest of the economy any good by sticking with that old reliable gear. You gotta do what the Maritime services did, get rid of that old

stuff and take up the new, hoswever flawed and no matter what complex
gear you have to get, so we can progress....."

Well? What were we supposed to get out of paragraphs of nonspecific
chatter that said essentially that in paraphrase?

> They are both telling Amateur Radio, each in their own way, that Amateur Radio
> needs to modernize.

When no such thing is needed in any way!!

Why do you think they are saying that? My interpretation
> is not that all hams need to become design engineers, but that hams should be
> making use of modern radio communications techniques within the Service.

And many DO! That is what shows that they will not be satisfied with
anything that hams do. The Carl Stevensons and Cecil Moores out there
are the root of it. Barely ever a ham at all, -hams have fun- they now
can do little but bitch about what everyone but they are doing. For
reasons known only to themselves FCC et all find themselves unable to
effectively shrug off that sort of crap and instead we get nothing but
criticism that we don't do all that they do! Looks like a terminal case
of envy! We actually have fun with what we do. It's a shame they can't.

Actually, one generally has the option of removing uncorrelated noise or
correlated noise. Removing uncorrelated noise works well for digital
signals. Removing correlated noise works well for SSB. Noise is removed
using adaptive digital filtering.

> > They are both telling Amateur Radio, each in their own way, that Amateur Radio

The great majority of hams are stuck in the 60s, Dick. We are already
stagnating 40 years behind the state of the art in RF communications.

He use a balance scale analogy to indicate the opposite of the facts he
cites.

> You cannot comment on the
> facts of the ham population, so instead dissect balance scale
> engineering, and thus you claim Len's statements false.

I DID not comment on that because no comment was necessary. I have
nothing to say on the issue other than, great! More new hams.

> Ergo coded ham
> populations are increasing. Nice fantasy.

Yours, not mine.

What's to taunt about?

> Is it an "exaggeration" that the no-code-test Technician class
> has been constantly growing since the beginning while every
> other US ARS class (code tested) has not grown nearly as fast?

Nope. That's not it.

> Is it "belittling" that over 200 thousand no-code-test Techs are
> now in the US ARS?

Nope. Not what I was referring to at all.

> Is it "insulting" that such facts are pointed out to those who
> have been code-tested?

You are all of the above, Leonard. It's amazing you can't see it.

> I suppose you are right. All this talk about stopping code
> testing is sure "stinking," isn't it?

I don't think so. You're like a bad comedian, Len. The jokes would be
funny if somebody else told them.

> didit

no you didn't

Haha, the infamous FUCKHEAD CHILD MOLESTER Molesterian has nothing
better to do than beet off to jpgs of handsome dashing rock vocalist
ERIC SAEGER, wishing he was a boy like the last boy he BEAT AND
MOLESTED with a two-headed dildo.
Molesterian lives in a big Maytag box in the Bronx, and he sprouted
from the bucktoothed choad of his HALF-MONKEY MOM and a thousand mental
patients.

Damned straight! My grandads team of horses and wagon got him into town just fine; wouldn't need these fancy cement roads, and there wouldn't be no damn Arabs taking all our money for some kinda refined decayed dinasoar muck. Never had to cross your fingers hopin' old Prince and Nelly would start on a cold morning.

Who needs this modern crap anyhow -- all this modern digital modem internet crapola is too complicated by far. At 15-cents a word Western Union got by just fine with some telegraph lines strung up along the railroad tracks and a kid on a bike delivering it right to your door -- why we gotta have all this satelite crap anyhow.

True. But you could also tell them that you can look up how to do polar conversions, and path loss calculations, and amplifier stage gains.

Maybe it's just a matter of opinion which things we need to know, and

which things we don't. Heck, isn't it true that everything on the ham exams can be looked up?
I think one could point to almost anything on the exams and make an argument that it didn't need to be there for the same reason you cite in the instance of code. One would counter that argument by saying that there is a reason for having that particular question on the exam. Are you going to claim that there are absolutely zero reasons that can be given for having the Morse code as part of amateur radio exams?

> So smirk, smirk. the PSk31 station requies many thousands of active devices plus all the cabling, setup and crossed fingers required to get it running.

> CW? well, you already know.......

Yes, I do; CW can be done with a single active device on transmit.

How many active devices are inside the transmitter you use for CW? Let's assume 10,000 per IC and count from there. The microprocessors and RAM etc probably have quite a few more, but that will be offset by some of the IC amplifiers. Don't forget to count your keyer, if you use one.

I don't agree with your statement for the most part.
>
> Electrons almost always are in atoms, and thus they take on

> are definite and not random.

True.

> Heat is usually defined as the degree of randomness of motion
> of atoms.

Not exactly. You need to study cryogenics and what happens at super
cold temperatures approaching absolute kelvanic zero where electron
motion approaches a stand still. Is it any motion that is responsible
for heat or is it heat that is responsible for any motion?...or is it
both? is there truly any random motion?
> An electric current can cause electrons to move in a medium by
> jumping from atom to atom;

Wrong. You said yourself that electrons hardly ever leave the atoms
that they are a part of.
Electro-chemical action such as electrolysis is perhaps the only
example of an electric current moving atoms...not just electrons. The
normal situation is not that electrons move from one atom to another
but that they polarize the atoms in a dominio effect. The current does
not "flow" either from positive to negative or from negative to
positive, as is taught in most tech and high schools, but the atoms of
conducting material become polarized and this polarization travels
through the conductor at a speed approaching the speed of light.

> this causes essentially random
> motion in the atoms (say, in a resistor), and thus a rise in
> temperature.

The random motion is always there at ambient temperature. The random
motion does contribute to noise if the conduction is part of the front
end circuitry of a sensitive radio receiver, for example. In a MASAR
the front end gets cooled by liquid nitrogen and this sharply reduces
the random noise. The random motion does not cause the material to
heat up to any temperature that is beyond the ambient temperature which
caused it in the first place. The ambient temperature can however be
considered as a reason for the electron agitation within atoms to exist.

> Removing the electric field leaves the atoms
> moving more randomly, but the electrons are not at all random
> in the reference frame of the atom with which each one is
> associated. If the atoms were not moving randomly, the
> electrons would not be, either.

The atoms do not move in most cases but the electrons in their outer orbits do become agitated.

> In a conductor, the
electrons (in the conduction
> band) hardly interact at all with any individual atom;
> therefore, with an applied potential, they transfer
> little random momentum to the atoms; therefore, they don't
> heat it very much.

You start the above by disagreeing with what you wrote at the beginning, but here again your conclusion is wrong because you are not agreeing with Ohm's Law. Every conductor has a finite amount of electrical resistance (even if it is 0.000001 Ohms).   If an IR drop occurs in the conductor it must disipate some energy...Most of this energy is disapated in the form of heat, although some energy is in the form of an electro-magnetic field, since any conductor which has any dimention will have some field developed about itself. Thus if accurate measurements are made any conductor will show some rise in temperature when it is conducting any electrical current. The motion we are speaking of is not random...It is determined by the nature of the voltage which causes the current and will be very constantly direct or related to the frequency of such current, if it is AC or RF.

> > What levels, at what frequencies can cause genetic damage? What can

> > >

All of the basic physics and chemistry that we may be discussing here has little to do with RF hazards. The human hazard problems that may or may not exist at radio frequencies (HF, VHF, UHF) may not be complertly explained by a knowledge of how electrons act at DC. That is particularily why I believe that the thermal considerations are but the tip of an iceberg. Let me get back to the human eye, for example. We know that we can not safely look directly at the sun or other high level sources of light. This is not just to avoid the heat that the sun radiates. Intense light is harmful to our eyes...and our eye lids normally automatically protect us from prolonged exposure to direct intense light. We can wear sunglasses to avoid light glare when driving our cars. The glasses filter out some of the light. The better sunglasses are polaroid types which can filter out light of one polarity and pass light of a polarity that is 90 degrees different. We can not see RF...BUT Perhaps we may need to wear specially designed filter goggles when we use HTs. Goggles can probably be made, which can filter out the RF which can cause eye cancer. This would be better protection than a device which is currently marketed. The device absorbs some of the radiated RF and causes most cell phones to increase RF output to compensate for the device's attenuation in order to maintain communication. In my technical opinion such a device can only shorten the cell-phone battery life and has little or no effect on reducing any possible hazard.

Thanks for your comments...Although maybe neither of us are sheding much light (or RF) on the subject.

Hams need more license classes and maybe more physics classes as well.

73,
Bob Wex w2ilp (I Learned Physics)

A man, visiting a crazy house, saw a man
who was trying to hammer a nail into
a wall head first. Another nut laughed
and said "If you want to do that, you
had better turn the hammer around".
Still another crazy inmate said,
"I know better! I was an engineer before
I wound up in this place. It is obvious
that that nail was designed only for use
in the opposite wall".
We all can understand that the nail
should be turned around...but if we
couldn't see the nail...such a project
(to show which way to hammer in nails)
could at least lead to a government grant.

That's it exactly! Sounds like the TCS-8 mounted just above the coffee
pot in Radio Central on a 2250-ton Gearing/Sumner class destroyer.

The TCS-8 back in Aux Radio went "pwaukty pwauktit pwauk pwauk
pwipwauk".

Above 25WPM they both
went "braaawwwwwwwkkkkkkkkkkkkkkkkkkkkkkkkkkkkkkkk".

Nine, not counting the power supply. Two of those is shared with the receiver. The rig is enirely homemade and homedesigned.

> Let's
> assume 10,000 per IC and count from there.

No ICs. Don't need 'em.

>The microprocessors and RAM etc
> probably have quite a few more, but that will be offset by some of
the IC
> amplifiers.

No microprocessors. Don't need those either.

> Don't forget to count your keyer, if you use one.

I use a Vibroplex Original bug. Folks I work cannot tell its sending from a top-of-the-line keyer.

Let's see - entire HF station has a total of 20 active devices in the transceiver and a bunch of diodes and regulators in the power supplies and antenna tuner/SWR bridge. Puts 100+ watts of clean RF in the antenna, which is also homemade. Cost about a dollar a watt to build, not counting the antenna tuner, which cost maybe $20 and is good for several hundred watts. Clock is an old mechanical 24 hour digital (Timechron?) job made from the parts of three junkers. The shack table and shelves are also homemade.

It's not top-of-the-line but it does OK. HA1TG and UA3RF last night on 40 CW - the latter called me! And I can fix, align and modify it with no worries.

Jim, you have yet to say anything intellectual, you discuss nothing, you only attack my character. It is likely you really have nothing to say intellectual or not, yet you go on and on and on. You, sir, are the jammer. Be Silent!

Fine! I guess balance scales cannot be in a process or a state of "tip-ping" until they have tipped. Everything is static until, suddenly, they are tipped. The balance beam cannot move until it instantly comes in to a state of having been tipped. The beam cannot be moving downward or upward.

The idea of tipping is impossible for you to grasp. I pity your waitress.

I don't think any of those questions has ever come up on any of my job
interviews, Jim. I am sure a prospective employer would judge which things,
such as the ascii code, are reasonable not to be committed to memory and
which things he or she expects an applicant to know. The FCC, through the
QPC, does the very same thing (at least in theory); no amateur examination

ever has contained all of the knowledge that a ham might acquire during a lifetime of hamming.

> I think one could point to almost anything on the exams and make an

I believe that amateur exams should contain the fundamentals of all that is relevant to amateur radio technology.

> Are you going to claim that there are absolutely zero reasons that can be
> given for having the Morse code as part of amateur radio exams?

I think not. My personal view is that Amateur testing should contain about 5 minutes of transmitted code and the applicant should be asked a reasonable number of questions (perhaps 2 or 3 in the General exam, as an example) about the content of what was sent. This should be part of the overall exam score. This would test Morse code the same way that all other aspects of Amateur Radio knowledge is tested.

I am sorry if I misunderstood your words, Dick. If you feel that telling
everyone here that learning new things is boring means that you want to
learn them, then I will take it that way if you say it again.

> What I said is that I have tried almost every new mode that came along
> and for the most part they are BORING! And yes, I "learned" new things

> about them, contrary to your assertion.

I think that you misunderstand what I mean by modern radiocommunications techniques, Dick. PSK-31 isn't one of them. Just as one example, many radio services use various spread-spectrum techniques to access an information channel, not frequency channelization. How is that being used in Amateur Radio today? How many hams understand the fundamentals of these technologies?

> But I gotta tell ya, I prefer the old crystal filter to anything DSP has
offered to date.
> I'm on my fourth DSP and so far I see nothing but disappointment from any
of them.

Much of the difficulty with DSP in modern radios is in the way it is implemented. There are major differences between the way that DSP is integrated within or outside of the AGC loops in receivers, and in the nature of the analog filtering before the DSP. At 12 or 16 bits, there just isn't enough dynamic range in the DSP in most receivers to be able to handle it all in software.

OTOH, "software defined radio" is the latest technique just now being developed in modern radio design. Using DSP, a basic "black box" radio can be reprogrammed to be anything from a CW rig to a CDMA transceiver. It is our future, Dick, and I hope that not all hams find it "boring." We are apt to see technology, and rules changes, that will accomodate this approach to radio design, and in a few years, or decades, I expect to see DSP develop to the point where one goes directly from code (the software kind) to antenna.

> I also have a little audio autonotch filter that has had much more use
against

I have heard carriers since 1963, Dick. Don't go blaming it on all the "new blood." Of those busted by the FCC for intentional interference of late, what percentage of them were "new blood?"

> > If Amateur Radio were not in touch with the technology of the 40s, we

Gosh, Dick, you sure do see everything in extremes. How did we get from my belief that more hams need to learn more about modern communications techology to "we gotta change everything." It is very difficult to have a conversation if my words do not mean what words mean to you.

> Evidently FCC and most of the others who seem to be monitoring our

What about the repeater that is used once a month for a club meeting? Lose
it? Why would one want to take on the administrative burden of trying to
keep hams off the air when there are technical solutions at hand?

Never be a need? I am sure there will be. There could come a need for me
to ride a horse, too, but I don't think I will ever see a horse-riding test
included with my driver's license. I think that society believes that if
there is a need for me to ride a horse, I will get up on the fool thing
somehow and pretty soon be a pretty good horse rider. There is a much more
likihood that there will be a need for voice or data communication, and the
best regulatory solution for that would be for the FCC to mandate that every
ham station be equipped for voice communication on HF and VHF. If they are
not willing to address that likely need through the rules, why would they
address the need for Morse code communication through mandatory testing? Why
do you select that one need and not feel that the FCC should do something to
address a much more likely need?

> > I believe in the ability of hams to learn and grow. If more information

I used your word, Dick, in the context I thought you meant it. If you need
to refresh your memory, do a deja search on yourself and the word "pause."

> I truly believe, indeed KNOW that this continued incessant demamding
> has caused many hams to abandon ham radio, just quit.

Why is it that my view that more hams need to learn more about modern radio
technology is "incessant demanding" but your view that all hams need to pass
a Morse code test is not? Your view has the force of law, while mine is
just an opinion. Which do you feel is expressed more strongly? And if my
opinion is enough to drive some away, what must the much stronger "opinion"
about Morse code testing do?

> You ARE taking your cues from Cecil. I rest on my laurals as a ham

> last one was over thirty years ago. If you believe that I haven't learnd
> anything since that time I'll just lump you in with Cecil, and surely
> you don't want to be there.

Of course I don't believe that of, Dick, but it is hard to interpret your
calling my expression of the view that more hams should learn the
fundamentals of modern radio technology as "incessant demanding." To me,
that appears to say that you do not wish to learn the fundamentals of modern
radio technology.

> If a few of you CW lovers whose real beliefs were not trumped by

> sheep.

Did you intend to be insultive there, Dick, or did you just get carried
away? With all of those buzzwords, I am not sure what you mean by that
paragraph, Dick, but I have very much been encouraging hams to use and enjoy
Morse code. Claiming that I am not is, IMHO, appears to me to be an Agenda,
too.

> You've got it backwards, again. It is not nearly as hard as they first

That's more like it; you are correct, learning Morse code is NOT a big hill
to climb that will somehow prove their character. :-)

Is "Dumbdown" your single good word?

I subscribe to the concept that more hams need to learn the fundamentals of modern radio technology. You seem to be having a lot of difficulty understanding what that means. I can't think of another way to say it, Dick.

Some of the questions are pretty simple; many are not.

I think we have about beat this one to death, and I can't think of new ways to say the same things again and again. At least for now, the last word is yours.

Oh. For some reason I thought you were making a case for looking it up
rather than committing it to memory. Don't know how I got that idea.

Not a problem.  I visited the public library after work today, I'm going
to the gun show tomorrow, and have a daytrip planned for St. Louis on
Sunday.  Back to work Monday morning, will attend a seminar in Cleveland
on Thursday....

My kids like pokeyman.  I've treated them to pokeyman toys, books,
videos, "snap" nintendo 64 game, and even a live show at the coleseum.

But pokeyman is still not the world's greatest hobby.  Not by any
stretch.

Most of what appears in QST is written by outside authors. Care to write?
ARRL pays. :-) I especially like the types of keys/advantages, though I
can't speak for the editor. :-) See http://www.arrl.org/qst/aguide/#qst

> I've seen more QST articles on PSK31 in the past two years than
> articles on Morse in the past 20-30 years.

See the list at the end of this post.

> Of course the new modes need to be promoted, but when decades go by with
no attention to a popular
> mode, there's a problem. Newcomers do not have the ability to easily dig
up articles from 30-40 years ago.

As soon as Al, AA1DO, finishes a major indexing project, I will see what we
can add to the TIS pages on Morse code. If you have any recommendations for
the best articles, that may speed the process up a bit. :-)

> - Other ARRL publications: When I started out, there was an excellent
> ARRL book called "Understanding Amateur Radio". It cost half the price
> of a Handbook of the time, (first $2, then $2.50) and it addressed the

> intended to teach the basics without a lot of math. There were two
> versions, then it was dropped. Lots of projects but also lots of plain
> talk about setting up a station, operating, etc. Such a "junior
> Handbook" is needed now more than ever.

Try the following:

http://www.arrl.org/tis/info/frsteps.html
http://www.arrl.org/tis/info/antbegin.html
http://www.arrl.org/tis/info/antproj.html
http://www.arrl.org/tis/info/propagation.html
http://www.arrl.org/tis/info/rigbuy.html
http://www.arrl.org/tis/info/homebrew.html
http://www.arrl.org/tis/info/srvceqpt.html
http://www.arrl.org/tis/info/rfigen.html
http://www.arrl.org/tis/info/labnotes.html
http://www.arrl.org/tis/info/science.html

and of course, lots of other stuff at http://www.arrl.org/tis

When you look at the volume of stuff, you will probably agree that ARRL is quite committed to helping new hams get on the air and active, and the price is right. As to actual publications, there are:

Now You're Talking -- this study guide actually contains a lot of info designed to serve as a ham's first tutorial publication about setting up and using a station. Catalog #7970, http://www.arrl.org/catalog/lm/

Ditto on the other license manuals

Others. (See the catalog at http://www.arrl.org/catalog)
Ham Radio Made Easy
The Best of New Ham Companion
Understanding Basic Electronics
Ride the Airwaves with ALFA & ZULU (more oriented towards children)

> In similar fashion, the fifty cent "Learning The Radiotelegraph Code"
booklet needs a new version
> that doesn't cost too much.

Code is best learned aurally. See Your Introduction to Morse Code cassettes and CD.

> Of course the N0HFF book on the MEGS site is excellent, and it's FREE for
the
> downloading. Maybe the ARRL could publish it?

Or link to it.

> ARRL Website: Some good info, but the list of Morse links is small and
> many of the best ones are notably absent or buried. Take a look at the
> Morse links at

> Nope.

> A link only costs the work to put it on the site, doesn't it?

Agreed, and I will ask Al to do what can be done. Of late, too many tasks and too little Al. :-)

> - Things the BOD can do: It's interesting that the BOD changed the ARRL
> policy on S25.5 so quickly and so quietly, but that's a done deal.

The Board published their intent to consider S25.5 on the ARRL Web, in QST, in the ARRL Letter and in a W1AW bulletin. In what way was it done "quietly?"

<snippage> Some of your other suggestions have been sent to your Division Director, Bernie Fuller.

> Learning and using Morse is neither difficult nor time consuming for
> most people IF the right methods are used. But a new or prospective ham
> looking at the ARRL website or QST will have a hard time getting info
> on how to go about it, even though such information is readily
> available if you know where to look.

With the mandate from the Board to HQ staff to promote Morse code use on the bands, the ARRL Web site is a natural place to begin. I can do some of that on the Tech pages, not because that is the best place for the info, but because it the area for which I am King. (Ah, it is Good to be King!)

> And that's just my short list.

How about the long one? :-)

73,
Ed Hare, W1RFI

Nope, it's exactly what is wrong with ham radio today. I remember when
many hams were at the leading edge of communications technology. We
are still at that same edge but now it's the trailing edge.

On the contrary, I used NUMBERS of licensees based on FCC
databases. Those were the FACTS, facts available from the
only US agency granting amateur radio licenses.

A METAPHOR was used to indicate the TREND happening.

Kelley made a Big Thing out of the metaphor at first, didn't
say anything about the numbers or the trend.

>> You cannot comment on the

According to Jim and Dickie you would be classified such. :-)

Denial is a powerful emotional survival skill. When threatened
in any form, especially about an avocational theological
concept, the denial syndrome makes them slightly crazy and
they refuse to admit it.

Part of the denial problem is a strong overlay of ego. If They do
something then "everyone else does it" or should. They climb up
on a pedestal and proclaim They are a role-model for otheres to
emulate. That's denial on afterburner.

My balls aren't made of crystal, therefore I can't know who many
are "in transition."   [does operating mobile count? :-)]

Poor baby, really struggling for a slam there? Did I deliberately and
maliciously, with callous disregard of sensitive USAMCC feelings,
"make it appear that ONLY "new" Technicians are making an impact?"

You MUST say so, Steebie, because all you have left any more is
insult, belittlement, denigration, etc., etc.

All I did was post a comparison between the code-tested licensees
and the non-code-tested licensees in the US ARS.

If you feel that only the code-tested are "real hams" then you MUST
take the comparison as an insult.

>> Is it "belittling" that over 200 thousand no-code-test Techs are
>> now in the US ARS?
>
>   Only to you. Must chap your chops knowing there's all those teen
>and pre-teen ops out there able to do what you CAN'T do after your
>years aas a technician

See, there you go again, being uncivil, rude, insulting...sort of an
extra grade asshole.   :-)

Steebie, I've been an ENGINEER doing electronics-radio design work
legally, titularly, and steadily employed as an ENGINEER beginning
in 1964. A whole host of federal agencies, several state agencies
all believed I was an ENGINEER. Fun jobs, all of them, paid fairly
well, too. Interesting work, some of it downright intriguing.

US amateur radio is not about being an engineer or not being an

engineer...it isn't even about employment except that no licensee
can use that license to gain income from it. Why do you keep
insisting that I am a "technician?"

Note: Engineers are not required to learn morse code for
engineering skills, diplomas, or titles.

>> Is it "insulting" that such facts are pointed out to those who
>> have been code-tested?
>
>   Only when YOU presume us to be ignorant enough to accept your poor

>> That is an ESTIMATE.
>

>Yes, it is. It's also true - the FCC renewed 4,870 Technician and Technician Plus licenses in that time period, and reclassified the Tech Pluses as Technicians. The holders of the licenses - the licensees - are responsible for maintaining proof that they have been code tested if they want to retain their HF privileges.
>
>This stuff is all explained on the Speroni site. Your failure to include it in your analysis is a serious error that reduces your credibility.
>
>> By using personal estimates based only on "gut feeling" or something, you are yourself in ERROR.
>
>My estimate is not based on "gut feeling". It is based on a thorough knowledge of the information, the applicable regulations and basic math as applied to statistics. It's a fair estimate.
>
>Your analysis did not include the fact that the FCC is renewing Tech Plus licenses as Technicians, and that by doing so, one cannot equate "Technician license" with "non-code-tested licensee". By improperly putting code-tested Technicians in the non-code-tested category, you overstate their number and understate the number of code tested licensees.

I didn't mention at all the renewals of Tech-Plus to Tech because the exact number of such renewals weren't listed except by inference on the Speroni tabulation of Renewed licenses.

I did as stated, taking the overall monthly numbers of licensees in each class, separating code-tested from non-code-tested..

I could have gone into an extensive "analysis" by including numbers of Expirations of licenses (also tabulated) and doing all sorts of second-guessing on the "why" of such. I did not.

The FCC renewal shift of Tech-Plus to Tech would put such Tech-Plus licensees in the CODE-TESTED group, would it not? The old Technician-Plus class required a code test for a license. In order to separate code-tested from non-code-tested, I made an additional posting regarding the 27 months between the start of 1998 and the end of March 2000. That additional listing excluded any "renewal" shifts from Tech-Plus to Tech. The results are still the same -

The total number of code-tested US ARS licensees is decreasing.
The number of non-code-tested US ARS licensees is increasing.
It has been that way for over three years..

<snip>

>End result is that your numbers are way off.

No. I am not ASSUMING anything about "renewals" or expirations

or anything else, just showing the totals of code-tested versus
non-code-tested over the last two-plus years plus the number of
NEW licensees, code-tested versus non-code-tested.

If you start assuming some condition, your "analysis" changes
to mere SPECULATION. That is no longer any valid analysis.

>How do you know? What is faulty in my estimate? I clearly
>said "SUPPOSE" - that makes it hypothetical.

Speculation is still speculation. Such is not analysis.

>> Note the
>> tabulation of NEW licensees which increased at 1184 per
>> month for the 27 months between beginning of January 1998
>> and end of March 2000 for Technician.
>
>The actual numbers jump all over the place from month to month. And the
>tabulation is of new licenses, not new licensees.

An average per-month value based on 27 months totals, divided
by 27. In the 27 months there were 31,971 new non-code-tested
licenses granted and 6,009 new code-tested licenses granted.
If you are really picky about smoothing methods, feel free to
pick out any period you want...but quit trying to say "everything
is faulty." :-)

>The number of new Technician licenses proves one thing: Most people
>starting out in ham radio do so by getting a Technician license.

How do you KNOW that? All I see is the number of licenses granted
for particular classes. Aren't there any "Extra-out-of-the-box"
licensees? Aren't there any "General-out-of-the-box" licensees?

>The
>data does not tell how many of those new licensees later upgrade,
>because upgrades are lumped into "modifications".

None of the publicly-available FCC databases predicts the future.

Can you predict the future? I can't. I don't have crystal balls.

>> but the trend is for
>> NEW Tech licensees still growing after January 2001.
>
>That's an ESTIMATE on your part. Nobody knows what the renewal rate
>will be like until they actually start to expire.

Sure, trends are ESTIMATEs. :-)   One plots past data and gets a
"curve" which may be a sort-of-straight line or something that is

curved. That estimate may be continued into the NEAR future for
a few months with some element of certainty.

It is better than picking fly droppings out of pepper to get the
number of Tech-Plusses renewed as Techs, the number of
Advanceds that were dropped to a lower grade for any reason,
or any number of "modifications." You can go to great lengths
to attempt "proving" something in the multi-tiered US amateur
licensing system. The only way you can REALLY "prove" your
numbers is to download the FCC databases yourself and make
your own search program to find EXACTLY what you are looking
for to show those #$%&!!! no-coders they are "all wrong." :-)

>That's simply not correct. I don't "wish" for a 5% dropout rate -
>I "wish" it would be 0%. The 5% is just a highly-educated guess, and
>identified as such.

Ah, "highly eductated!" Presumably there is some certificate or
diploma attesting to such ability? I'd still call it a plain GUESS
and lump it under speculation.

>By ignoring the fact that no Technician licenses have expired yet, your
>analysis is even more faulty. My estimate is closer to the facts than
>yours because it includes relevant corrections. My method is simply
>more accurate.

It is "more accurate" from the pro-coder's viewpoint. It is "more
accurate" because you said so. :-)

>It was identified as a "suppose". You ignored the whole expiration
>thing completely. My analysis is more correct because the relevant
>factors are included, and estimates identified as such.

It is "more accurate" from the pro-coder's viewpoint. It is "more
accurate" because you said so. :-)

>You have no idea how many will expire and how many will renew, either.

Absolutely true...and I NEVER PRESUMED TO KNOW THE
FUTURE. All I stated was a Trend based on PAST data.

>My estimates are accurate within the limits stated. My analysis is more
>accurate than yours. Much more accurate.

It is "more accurate" from the pro-coder's viewpoint. It is "more
accurate" because you said so. :-)

[doing good in the "nyah-nyah" department...:-)]

>The trend is that most new hams start out with Technician licenses.
>That's been the trend for over a decade. Some upgrade, some don't.
>Describing all Technicians as "non-code-tested licensees" is simply not
>correct or accurate.

The US Technician class amateur radio license test did NOT include a morse code test element...ergo, the Technician class license can be considered "non-code-tested." That is what I said.

>I'm not denying any trends. I'm just stating the facts and pointing out
>your errors. Which of my facts is not true?

Some of your "facts" were simply SPECULATIONS. One even had the imprimateur of "highly educated." Speculations aren't true or untrue, but they sure as hell aren't "facts."

>10 months of data are available, so why not include them? The longer
>the baseline, the more accurate the extrapolation or interpolation.

Oh, geez louise. Jim, if you want to Show The World The Errors Of The Uncoded, go do your own arithmetic and post the results.

>Basing conclusions on the 10 months of data following the restructuring
>is, by definition, more accurate and correct than basing them on the 9
>months of data following the restructuring.

No sh*t? Is that from the "highly educated" school or something?

>> What about the two years PRIOR to restructuring?
>
>Different ballgame. Different license structure, different test
>requirements, different dynamics. And the FCC was renewing Tech Pluses
>as Tech Pluses back then.

No sh*t? In the period before restructuring too place, was there an increase in the code-tested license numbers and a decrease in the non-code-tested license numbers ???

>Which tells us that most new hams start out with the Technician
>license - as I have written many times. Upgrades are not shown as new
>licenses in the Speroni data. Upgrades are not shown separately in the
>Speroni data, either.

I don't think downgrades are shown either...but they exist in the FCC database files. As I have suggested before, go download your own database files and do searching for whatever data you want to "prove" something. They are ASCII files and searchable with a text-based search program.

>And the restructuring DID have an effect. Once the NPRM was announced,
>hams and prospective hams who kept up with the news knew that changes
>were probably coming. Some of them would act accordingly, perhaps
>delaying upgrading until the new license structure was known. After the
>late December 1999 R&O, those thinking about getting licenses or
>upgrading knew what was on the way and acted accordingly. The exact
>effects can only be guessed at, but there WERE effects.
>
>What do you think the above data says in terms of trends, beyond the
>fact that most new hams today start out as Technicians?

The above "data" paragraph is your own reporter-voice description.   :-)

Not all new hams start out as Technicians. In the 27 months
between start of 1998 and end of March 2000 there were
1900 New Novice class licenses granted, 3,504 New Tech-Plus
licenses granted, 459 New Generals, 78 New Advanced, and 68
New Extra. Yes, Jim, "MOST" new hams probably DO start out
as Technician class licensees (they aren't all job technicians,
some may be engineers, housewives, plumbers, etc.).   :-)

>"And it is to be expected that the easiest-to-get US amateur radio
>license will have large numbers of licensees."
>
>That's better. I apologize for being vague in that statement the first
>time.

Are you absolutely SURE of the first sentence above? After all,
the FCC is renewing Tech-Plusses who don't re-test on renewal
as Technicians, and "many" of the existing Techs will drop out,
and aliens might invade the earth to be repulsed by morse code.
Or at least repulsed by long-time morsemen who will fight
change (of any kind) to a moral, mortal end.   :-)

Dick, it's the truth. A/Ds and processors are getting faster every year
and every year digital electronics takes over more and more of the
functions from analog by doing the job cheaper and better. Soon, everything
this side of the mixer will be DSP functions. The Kachina radio was just
the first of many.

I know how you got that idea. Ed said the Nokia engineer who programmed
the cell phone that beeps Morse could have just looked up the Morse, and
you took that to mean Ed thinks that amateur Morse testing should be via
look-up because, um.... well, because, er... I guess I *don't* know how
you got that idea!

n2ey@aol.com (N2EY) wrote:
>[What were the reasons that ham growth stopped dead in 1962?]

>SWLs could no longer easily listen in on ham QSOs, as they did in the AM days.

In 1959 as I recall it was still about half SSB, half AM. I don't
think AM was anywhere near gone by 1962. Further, most of the SW
receivers of the day had a BFO (even the cheapie $29.95 Heathkit AR-3)
which made SSB copy possible. I think that any SWL worth his salt
could still listen to hams...

>The cost and complexity of an SSB setup also had a negative effect
>on prospective hams by making it more expensive to get started on 'phone.

I think it was 1962 or 1963 when I bought my first SSB rig, a Heathkit
HW-22 40 meter monoband transceiver. The price was around $112 bucks
(I think - check your QST collection), in any case it was cheaper than
most of the AM stuff at the time...

>In 1963 the distance requirement was increased from 75 miles to 175 miles,

I could see this causing a 10% drop, but a "stop dead" drop??

>To add insult to injury, the FCC started charging fees of $4 to take the exam

Why would a small fee stop a prospective ham who likely will spend ten
times that amount on his radios...

>- CB: 27 MHz CB had been introduced a few years earlier, but by 1963 the number
>of CBers was greater than the number of hams, and growing fast. The equipment
>was inexpensive, the antennas small and simple, and there was no test at all.

This is certainly a possible reason. Most of the fun of ham radio
without the test. Food for thought: Did CB do to ham radio in the 60s
what the Internet is doing to ham radio today...

>- Cultural changes: ... Very few hams of '60s looked like
>John Lennon or even Austin Powers.

You think that incentive licensing increased the numbers by making
hams look better??   :-)

>TV watching increased all through the '50s and '60s.

How does that explain the sudden stop in '62?

>- Economic conditions: For some reason, ham radio tends to grow more during
>periods of bad economic conditions than during good ones,

Were we in a recession in 1962? I forget...

>Waddya think?

Interesting thoughts Jim. It doesn't seem logical to me for most of these things to account for zero growth, except maybe the CB thing. But I sure don't have any other ideas. In fact I wasn't even aware of the 1962 growth cessation. Thanks for the insight, it was an interesting read...

>cannot learn the fundamentals of how it works.

I don't think I said that today's hams can't learn the fundamentals. And of course just knowing the fundamentals does not a technical ham make. In the 50s it would be unthinkable for most hams to send a rig back to the factory to be fixed. Today it is common place...

 If there is truly no need for a fast horse riding test, say 13 mph,
included with your drivers license, why would there be a need for a
slow horse riding test, say 5 mph...   :-)

Lucky for me I grew up in a country where BRAVE MEN decided to break some
laws in the year 1776!
And they didn't turn them selves in to some king.

There was still some AM in 65-66, when I started listening. But there was far more SSB.

> Further, most of the SW
>receivers of the day had a BFO (even the cheapie $29.95 Heathkit AR-3)
>which made SSB copy possible.

IF you knew how to work it. Many SWLs did not.

>I think that any SWL worth his salt

>could still listen to hams...

IF their receivers had BFOs and IF they knew how to work them. And if the cheap
SWL rx stayed on frequency long enough to copy anything. Point is, it was not
nearly so easy to listen to hams on SSB with the SWL sets of the time as it was
to listen to hams using AM. That's just as true today.
>
>>The cost and complexity of an SSB setup also had a negative effect

>(I think - check your QST collection), in any case it was cheaper than
>most of the AM stuff at the time...

It was $112 bucks or so for the rig itself, then another $30-40 for the power
supply. And what you got was an SSB-only monoband rig that needed a 1:1 SWR (or
close to it) to work.

On the other hand, a Novice could add a modulator to his MOPA CW rig and go on
AM easily and cheaply. Some folks used cathode or screen modulation, which
could be added for almost nothing. Sure, the efficiency was awful, but it got
ya started.
>
>>In 1963 the distance requirement was increased from 75 miles to 175 miles,
>
>I could see this causing a 10% drop, but a "stop dead" drop??

Not this reason alone, of course, but it made a dent. None of these reasons
alone caused the stop, but each one made a dent. The sun of all of the dents
added up to no growth.
>
>>To add insult to injury, the FCC started charging fees of $4 to take the

>
>Why would a small fee stop a prospective ham who likely will spend ten
>times that amount on his radios...

$4 was not a small fee in 1963. Many newcomers were teenagers, and the minimum
wage was maybe $1. So we're talking 4-5 hours minimum wage to take the test,
pass or fail. What's 4-5 hours of minimum wage today? More than $20.

Again, it made a dent. Add it to the 175 mile trip, and it gets costly fast.

>without the test. Food for thought: Did CB do to ham radio in the 60s

>what the Internet is doing to ham radio today...

Of course it did. The cheap walkie talkies kids got for Xmas helped feed the frenzy, too. Many kids I knew back then talked their parents into getting CB setups, which they then used. For less than $150 you could have a complete 23 channel CB setup, with antenna, coax, the works. No license, no tests, no nothing. And you could blame the TVI on the ham down the street.
>
>>- Cultural changes: ... Very few hams of '60s looked like
>>John Lennon or even Austin Powers.
>
>You think that incentive licensing increased the numbers by making

Not exactly ;-) But how many hams do you think went to Woodstock?
>
>>TV watching increased all through the '50s and '60s.
>
>How does that explain the sudden stop in '62?

It made a dent. And the teenagers of 1962 had been born in the postwar years and grown up with TV.
>
>>- Economic conditions: For some reason, ham radio tends to grow more during
>>periods of bad economic conditions than during good ones,
>
>Were we in a recession in 1962? I forget...

Just the opposite. The '60s were boom times. The recession and inflation came later, as the deficit spending of the Johnson and Nixon administrations caught up with us. Then the oil embargoes hit...
>
>>Waddya think?
>
>Interesting thoughts Jim. It doesn't seem logical to me for most of
>these things to account for zero growth, except maybe the CB thing.

Each one had an impact. If you have five items and four of them take 5% and one takes 25% of the growth, there goes 45% of your newcomers.

>But I sure don't have any other ideas. In fact I wasn't even aware of
>the 1962 growth cessation. Thanks for the insight, it was an
>interesting read...

You're welcome. Some folks moaned back then that "ham radio was dying" because there were only 250,000 hams and they were all getting older. And the new gear was too complex, the tests were too hard, the ARRL was ruining everything, etc., etc. Sound familiar?

It was not. Even by 1968, AM was far from dead in the Amateur Radio Service.

> Further, most of the SW receivers of the day had a BFO (even the cheapie
$29.95 Heathkit AR-3)
> which made SSB copy possible. I think that any SWL worth his salt could

My SWLing was with an old Zenith Transoceanic receiver. I don't recall it having a BFO.

> I think it was 1962 or 1963 when I bought my first SSB rig, a Heathkit

I bought my used DX-40 for about $35.00, and later a used DX-100 for $75.00.
The DX-100 modulator made a great guitar amp. :-)

> Why would a small fee stop a prospective ham who likely will spend ten
> times that amount on his radios...

Most commercial HF transceivers today cost about $1000, in round numbers.
Lets assume the average ham spends another $1000 on the rest of his or her

station. Would a "small fee" of $100 today, to take the conservative number, based on your 10%, stop a number of people from becoming hams?

> This is certainly a possible reason. Most of the fun of ham radio
> without the test. Food for thought: Did CB do to ham radio in the 60s

What percentage of those CBers went on to become hams? I did.

> >TV watching increased all through the '50s and '60s.

> How does that explain the sudden stop in '62?

And TV watching increased through the 70s and 80s, too, a time of steady growth in amateur radio.

I always thought that "break" was an "pseudo emergency" "pro sign" in FFC or
maritime language not to be used routinely.
What do others think.
Rik

It probably had more to do with the ecumenical wine and the movie "Two
Mules..."

I was a maritime shipboard radio officer many years ago, and can't
resist passing on to the more recent folks, a couple of Q signals
that also were not in the books, but were quite commonly encountered:

QWC - "Water Closet" the British equivalent of toilet; in other words,
I will be away from the key for a moment or so......

QLF - Please send with your left foot; your right foot sounds tired.

A double break ("break, break") or triple break used to be used to
indicate priority or emergency traffic. The FCC doesn't have any
guidelines on the matter.

Tentec also sells both an HF and a VHF transceiver that work this way. Tentec's shortwave receivers also use DSPs for everything from IF to audio, as does the JRC NRD-545. Watkins-Johnson sold the first receiver I was aware of that did this, but they've since gone out of the business.

For transmitters it is in principle possible to avoid mixing stages altogether, instead generating the modulated RF directly using a DDS chip as the DSP's output device. Unfortunately, I discovered that the outputs of current DDS chips can have more spurs than a Texas saloon, so this may need to wait for another generation of the technology.

While it may not have the endurance as others you've mentioned, Pokemon is a major obsession with many people. As the fad passes, it will probably be regulated to comic book and/or sports card shows, where such collectables thrive.

Besides, when I posted my original comment, I was being facetious, so lighten up!

You're absolutely right, Dick. He should have that most hams are stuck in the
50s.

This is a regional thing. I don't remember any SSB CB'ers using "contact" instead of "break" in the 70's (Washington, California, or North Carolina). And I haven't heard a single ham operator around here using it today, but I did hear it one time in Washington state recently.

Because it is so regional in nature, I really don't think we can so easily blame this on "those CB'ers." Instead, I suspect this is coming from somewhere within the ham community itself, or coming from plain language outside of radio.

> When I want to break in, I just give my

Most people do that, but I don't know how much it really saves time by letting people know who's breaking in. In my case, unless I already know the person (and callsign), I rarely ever catch the callsign of those breaking in this way.

With freedom, comes responsibilty. Freebanders aren't acting responsible when they interfere with other communications services. It's the "yelling fire" cliche.

I do, however, have a problem with the FCC telling me what topics I may or may not talk about. Example: During an interview several years ago, an FCC official said that discussing controversial subjects over the amateur frequencies basically violated 97.1(e), because such subjects, as he put it, "did nothing to enhance international good will."

I'm proud to "hang" with the element I'm associated with. They are good ops and active ones. I've been walking the walk and, as far as I can tell, you pretty much just talk the talk. That you consider some of my friends "the wrong elements" speaks volumes.

That isn't my view, Len. Quite a few here have interesting or funny
things to say. You just aren't one of them.

This new "only US agency granting amateur radio licenses" thing is beginning to sound tedious. Do you believe that anyone here doesn't know that the FCC grants amateur licenses? If you follow procedure, you can get one too. Good luck with the exam.

>with whatever the ARRL says and does.

Nor can you speak for people who willingly embrace a challenge and go out and achieve a worthwhile accomplishment instead of whining that the rules have been changed! I never could understand the post-Incentive Licensing General and Advanced licensees that refused to upgrade to Extra, except for the fact that most of them are primarily phone operators! I wonder -- if the FCC had grandfathered them with Extra-class phone privileges, would the whining have subsided? I'll bet it would!

I believe the FCC should always make liberal use of grandfathering of privileges, just so hams like myself, who don't have a problem accepting a challenge, don't have to be bothered to listen to the whining!

Cecil:

That's where you'd be wrong, again! You're pretty annoying at times,
but you've never hit me with a stick! Where did this stick-hitting
requirement for annoyance come from, anyway? You don' need no
steenking sticks in order to be annoying!

Ed:

I would say that their objections to the way Morse code is tested sounds a lot like whining -- as it always does!

>> However, its a moot point now. Pretty soon we'll have the beepless ARS
>you've always dreamed about.
>
>I do not believe that Morse code use will end any time soon, Larry.

Notice, one and all, that Ed didn't say that its use would NOT come to an end -- which it certainly will now that the testing requirement is all but gone.

>Do you
>feel that the mode has so little value to ham radio that no one will learn
>it and use it unless it is tested?

Asked and answered, many times. Whether or not people will learn and use the Morse code in the absence of testing has nothing to do with its value -- the testing requirement provided the incentive to learn Morse code at a useful level. I did not learn the Morse code due to the "usefulness" of this mode, which I was certainly not interested in at the time. That usefulness was made clear to me only after I gained fairly good proficiency in using the mode. The requirement is what kept the mode alive. I dare you to gather 30 prospective new hams, none of whom have been exposed to any part of the hobby beforehand, for the purpose of "Elmering" them into the hobby from scratch, and end up with more than two of them becoming proficient (capable of handling message traffic at 18 WPM) CW operators with no *requirement* that they do so. It is impossible. That was not conjecture; that is a statement of absolute fact. I'd be more than willing to bet that what you'd end up with is ZERO.

>I disagree; all of the other modes have
>avid proponents without such testing.

And none of these other modes require the physical development of an operating skill which requires a great deal of personal motivation, dedication, and perseverence to master. Hell, the majority of hams utilizing "high-speed digital modes" can't even get a message out without the use of pre-programmed buffers. If you want to discuss replacing CW tests with high-speed (> 40 WPM) typing tests, then maybe we can reach some sort of compromise!

>I do not agree with you that those
>modes that use code are the bottom of the pile.

Well, then, Ed, I guess you'll have to disagree with me then. This
is America -- disagreement is allowed. Of course, in this case,
disagreeing with me makes you wrong, but that's *your* problem!

>But I thought CW gets through when no other mode will. Is that true only if
>the other mode is not allowed to be used?

Ed:

I don't recall ever reading or hearing anyone say that CW gets through even in the presence of overpowering QRM from signals of other modes. A .5 Watt CW signal can be heard and understood under extremely adverse conditions -- conditions which would make a phone signal at a similar power level hopelessly unreadable. However, this same CW signal, when wedged between high-powered, over-modulated, over-compressed, over-everything'd phone signals, won't be heard at all. Now -- a similarly powered CW signal would probably get through just fine, in spite of the QRM -- but one of the main benefits of CW is to be able to avoid using high power.

In any scenario where CW subbands are shared with phone signals, CW will tend to lose out. Its only natural.

Then why not post it in public here for all to see?

You have never said it publicly as to employer or an employer's
amateur radio club.  Is that so difficult to admit?

Well, Ed, you admitted it up front in the signature to a message
body. Some others have to have their occupational information
squeezed out, sort of like whacking the old glass bottles of
ketchup to get anything. :-)

BTW, I have nothing at all against what the ARRL does as
services. It does PLENTY of them and amateurs should be
more grateful for such. My only dispute is with some of the
ARRL's policy decisions...which is coming around from their
1930's standards and practices basis slowly.   :-)

Not at all. Having a second residence for yourself gives you
some free time to do as you wish.

>> Driving 6 hours a day? Doing e-mail and newsgrouping from
>> one of those jobs? Which one?
>
>   Actually, it's three hours on Monday and three on Friday. The
>nursing's in the middle when I choose to take an Agency shift.

Better get in contact with Macon, GA, and renew Georgia LPN
certificate #52241 since it expires 03/31/01. It was first taken
out on 07/12/95. No problem on the Tennessee LPN license
#49513 since that won't expire until Septermber 30, 2001.   :-)
[original issue 1 November 1994]

That took only a few minutes going through state websites
However, those state websites do not reveal whether or not
a licensee is actually USING those licenses for nursing.
Anyone who is proud of what they do should be able to
tell one and all what the license numbers are and where
they can be found. It's in public view and listed by a state
agency. :-)

Previously, Robeson stated that he took the purchasing agent
job because of "burn-out" from nursing. Now it is revealed that
he works as some kind of temp (?) nurse after regular company
hours? Inconsistency there or a lack of full explanation.

There is also some curiosity as to why someone has to travel
about 170 miles or so (3 hours driving time) away from home
when there most certainly are some electronics-radio related
companies in the Tennessee area closer to Dunlap.

>> If someone posts an uncivil message, they might get a reply

No "sitting in front of a computer" pay-offs. Long ago I selected
message headers to be included in all newsgroup downloads.
A past message (some months ago) contained HEADER info
on the origin of one of your messages. You have never said
who your employer was in the body of a message.

>> On the other hand, someone who sits around doing newsgroups
>> and e-mail on company time might not want it known...
>
>   I am sure you will tell them!

Why should I do that? Any MIS manager will be able to look
back at employee computer use and be able to pin-point
when-where-who of employee terminals.

>> BTW, their company phone number is 678-473-2000
>
>> 800-FIBER-ME.
>
>   I have no doubt taht a bit of fiber in your diet would go a long

The "800-FIBER-ME" is from the Antec home page under "how to
reach us" button.

>   You can change that to "8515" if you have the intestinal fortitude
>to engage in a personal conversation. Knowing you for the coward you
>are, I'll just go on about my day.

Why should anyone bother to communicate to one who will do
nothing but insult others and generally act like some sort of
USAMCC Dill Sergeant?

>   Past events would indicate that you don't have that fortitude.
>Not even to say "I am busy right now". However you then have great fun
>creating fictional events SUBSEQUENT to that. You always do.

Poor baby...Steebie once broke into my Buddy Chat session
with my wife who was on a trip up north. He didn't get any
"satisfaction" out of DEMANDING to break in. His royal
hynie hasn't been the same since. :-)

>   And by the way, we are a subsidiary of Antec, "Electronic System
>Products". Bob's stock problems are his own, thankfully.

What your employer does is your employer's business. Since
you've never admitted to working for them before, I doubt you
care much for them...but that is between you and your employer.

>your eyes.

Nope. Where do you work? You didn't say, for either states
of Tennessee or Georgia. Hans Brakob broke it first. Then I
looked at the websites for the states of Tennessee and Georgia
for your LPN certificate numbers...and posted them. You have
never posted such information.

>> Don't try to bluff or play e-poker, here. Show your references

>opportunity to spread your decitful and lecherous tripe completely
>unchecked.

"Deceitful and LECHEROUS tripe?!?" Oh, my!

First of all, the information I've presented in public here can be
verified by anyone else accessing www.state.tn.us or
www.state.ga.us and then following the buttons to get to LPN
license registry. [Georgia's a bit harder to get to than
Tennessee, but that was just for getting to the license search
pages]   No "deceit" there.

I'm not certain what is meant by "lecherous tripe." A "lecher"
is a lewd, grossly sexual man according to my handy Websters.
"Tripe" has two definitions, one of which is the lining of the
stomach and intestines, colloquially known as the "gut."   :-)
That would imply "lecherous tripe" as being something sexual
involving guts. :-)   :-)   :-)

Maybe humorist Dave Barry could make more of this but I'm
laughing too hard to type more...!

n2ey@aol.com (N2EY) wrote:
>it was not nearly so easy to listen to hams on SSB with the SWL sets of
>the time as it was to listen to hams using AM.

If an SWL couldn't figure out how to use a BFO to listen to SSB I
doubt that he would make it as a ham back then...

>It was $112 bucks or so for the rig itself,
>then another $30-40 for the power supply.

I didn't get the power supply. I made one from old TV set parts. It
sported a couple of 5U4s. Great regulation...   :-)

>And what you got was an SSB-only monoband rig

I bought some parts (crystals and coils) from Heathkit that were
designed for the 80 and 20 meter models. I used a few switches and
presto it was a tri-band rig: 80, 40 and 20 meters...

>that needed a 1:1 SWR (or close to it) to work.

That was easily solved by putting a broadcast receiver type 360
micky-mike (remember that word?) variable cap across the output which
made it into a pi net, and then it would load almost anything...

>On the other hand, a Novice could add a modulator to his MOPA CW rig and go on
>AM easily and cheaply.

I'll agree that AM was cheaper (using used old used gear). I was just
saying that SSB didn't have to be all that expensive...

>Some folks used cathode or screen modulation, which
>could be added for almost nothing. Sure, the efficiency was awful, but it got

Remember the old Heathkit DX35 and it's "controlled carrier" (screen)
modulation? I think it measured in the neighborhood of 25 watts AM.
That really didn't cut it...

>$4 was not a small fee in 1963. Many newcomers were teenagers, and the minimum
>wage was maybe $1. So we're talking 4-5 hours minimum wage to take the test,
>pass or fail. What's 4-5 hours of minimum wage today? More than $20.

Do you really think that $20 would stop a teenager today from becoming
a ham if that's what he wanted? Have you priced some of the teenage
toys these days...

BTW I was making $88.25 a week at Motorola in 1963 with a wife and
soon to be kid. That $112 for the SSB rig was hard to cough up, but
heck what's more important anyway... :-)

>how many hams do you think went to Woodstock?

Dunno. But I think the Woodstock populace might be an improvement over
some of the characters I see at the ham swapmeets here...   :-)

>Some folks moaned back then that "ham radio was dying" because
>there were only 250,000 hams and they were all getting older. And the new gear
>was too complex, the tests were too hard, the ARRL was ruining everything,
>etc., etc. Sound familiar?

Yeah, but it's all true now,
(except for the tests being hard)...   :-)

>My SWLing was with an old Zenith Transoceanic receiver.
>I don't recall it having a BFO.

Well Ed, the resourceful kids/SWLs of my youth used to place a broadcast receiver physically next to the BFO-less SW receiver. Then you tuned the broadcast receiver until it's oscillator beat (in the IF) with the signal on the SW receiver. Worked great...

>Most commercial HF transceivers today cost about $1000, in round numbers.
>Lets assume the average ham spends another $1000 on the rest of his or her
>station. Would a "small fee" of $100 today, to take the conservative
>number, based on your 10%, stop a number of people from becoming hams?

If they planned to buy a $1000 dollar rig, I doubt that even a $100 dollars would stop them. I pay a fee of $240 a year for internet service. My laptop cost $1300. If this machine has a useful 4 year life, I will have paid around 75% of my hardware costs in fees. I suspect that many teenagers pay as I do for the net, so why not a small 10$ a year ($100 fee/ license term) fee for hamming if that was their desire...

>What percentage of those CBers went on to become hams? I did.

What percentage of hams became CBers? Everybody I knew in the 60s did.
We all got those nifty call letters/numbers... :-)

No you don't. You do your damned best to create a few.

> You've done nothing of the kind, only shot off your keyboard again.

Keep telling yourself that, Lennie. I am sue it makes you feel good THINKING that.

> Try to concentrate on the facts of what is happening to others, by
> others, especially concerning newcomers to US amateur radio.

As an ACTIVE licensee I am acutely aware of more than YOU will know. You should try it sometime.

HOW MANY antennas have you helped erect for "newcomers" in the last 30 days, Lennie?

HOW MANY VE sessions have you proctored?

HOW MANY nets have you participated in that introduced "new hams". Lennie?

I can assure you that the answer in MY case exceeds "1" by a large margin in EACH of the above cases.

Which in only ONE month exceeds your total for the DECADE.

Adios, Chump. Get a life.

> maliciously, with callous disregard of sensitive USAMCC feelings,
> "make it appear that ONLY "new" Technicians are making an impact?"

Lenni, almost every post you make is intended to insult or troll. The first post of this thread is pure proof of that. It had absolutely NOTHING to do with the implementation of ANY policy. Just your attempts to further incite discontent.

> You MUST say so, Steebie, because all you have left any more is
> insult, belittlement, denigration, etc., etc.

Hmmmm....call me "Steebie" (pablum caught in your dentures again?) and THEN attempt to cahstise ME for "insult(s), belittlement, denigration, etc, etc"...?!?!?

If THAT'S not pure Lennism, I don't know what is... ! ! !

> All I did was post a comparison between the code-tested licensees
> and the non-code-tested licensees in the US ARS.

No what you did was troll. You succeeded.

> If you feel that only the code-tested are "real hams" then you MUST
> take the comparison as an insult.

You ATTEMPT to ask one of those "Do you LIKE having sex with your sister" questions. Of course they are "real hams". The "arguement" is NOT are they real hams, but are YOUR numbers valid. THAT answer is NO.

> See, there you go again, being uncivil, rude, insulting...sort of an
> extra grade asshole.

And now the resulting profanity.

> Steebie, I've been an ENGINEER ...(SNIP)

And WE (yes, WE) DON'T CARE! NONE of that makes a didly squat difference because THIS NG is about HAM radio...NOT "Ex Engineers With A Chip On Thier Shoulders".

Of course if we created an NG just FOR those persons, you'd pretty much be talking to yourself.

> Why do you keep insisting that I am a "technician?"

Probably for the same reason YOU keep lying, using profanity and generally being an annoying little twerp. Because I CAN.

> Note: Engineers are not required to learn morse code for
> engineering skills, diplomas, or titles.

Who said they had to?

> Gosh, thanks, Sancho Panza! Now get on your ass and follow
> your Don to the next windmill.

I am not the one jousting the windmill, Lennie. That's YOUR claim to fame.

> PS: Good going, Steebie, you got in early to work to post e-mail
> at 7:48 AM.

You have done ONE positive thing for me, Lenni. I will not retire until I just can't go on any longer. If all you can do is check date-time-groups to find some percieved impropriety in when/how someone responds to YOUR tripe, then I guess there's not much left to do in life.

Maybe you should write a letter to Uncle Jack in care of the Michigan Department of Corrections and see if he can make any suggestions, in as much as he's out of service at the moment. Since you have lost all remaining vestiges of productive life, I am sure he'll be glad to usher you to the next life.

Of course LENNIE is the only one who can use "metaphors" or "analogies" to make a point. Anytime anyone ELSE uses one, Lennie launches into another one of his slatherings about how the application allegedly doesn't fit HIS interpretation.

You missed Arkansas licensure, too, although that one's been inactive a while. Not to mention EMS certifications in four states, FAA licensure (albiet not professional) and numerous endorsements from the AHA, ARC, other agencies that I am sure you might recognize.

> Is it on a website or printed in a written document?

What part of "public information" don't you undersatnd, Lennie. Believe it or not, the presence or lack of presence on the Internet does not substantiate validity. You are invited to contact TAG Tennessee and find out for yourself.

> First of all, the information I've presented in public here can be

> pages] No "deceit" there.

Hmmmm.....now I am wondering what MY licensure as a nurse in ANY state has to do with your trolling in Amateur Radio related newsgroups...?!?! THIS is an interesting stretch, and a sorrowful one for you to follow in order to deflect from the fact that you have been bested by Hams again.

> I'm not certain what is meant by "lecherous tripe." A "lecher"

In as much as your previous AOL posts said your "hobby" was being beaten with purses by Ruth Buzzy on park benches, I wonder too...?!?!?

> Maybe humorist Dave Barry could make more of this but I'm
> laughing too hard to type more...!

And I am sure that in YOUR mind, the laughter is frequent and plentiful. It usually is for folks so afflicted.

Actually it's already renewed(or at least I have forwarded the package) but thanks for your concern. And it's "P052241" to be accurate.

> Previously, Robeson stated that he took the purchasing agent

I said I took the job to "take a break", Lennie...NOT to completely disassociate myself. Of course, not having never held a job that had such responsiblity, I doubt you can "relate".

> There is also some curiosity as to why someone has to travel

If I wasn't doing my job in a timely fashion, I wouldn't be doing anything else.

> "satisfaction" out of DEMANDING to break in. His royal
> hynie hasn't been the same since.

No, Lennie, acutally by not blocking your IM's to others, you are patently allowing others to "enter" the conversation. It's only when you block the IM's or say "I am busy right now" (or words to the effect of "get lost") that an incursion has occured. You COULD have "allowed" only your wife's (or other specific friends or families) screen name while blocking others, but you didn't.

Actually, I think there was probably no such "emergency", and that this is just some make-believe "event" conjured to further substantiate the victim role. Otherwise you would have been civil enough to at least express the circumstances. "Family emergency. Can't talk. Sorry" Thirty six keystrokes in all, less than 10 seconds. Your "wife" wouldn't have noticed you were "gone".

But I see you are CLINGING to the "victim" role. At least you are consistent

> What your employer does is your employer's business. Since
> you've never admitted to working for them before, I doubt you
> care much for them...but that is between you and your employer.

What I don't care for much are liars who insist on defaming that which I have enjoyed for three decades.

A situation containing incongruity is funny.  We laugh at the
incongruous.  You occasionally make me laugh, Len.  I'm positive that
the humor isn't intentional on your part.

> A Dave Barry you AIN'T...!
>
> didit

I dunno, Len.  Dave Barry is a minister's son.  I'm a minister's son.
Dave Barry plays guitar.  I play guitar.  Then there is the Miami
connection.  Oh yeah--we're both named "Dave".  My sister's kid played
the older boy in the "Dave's World" series.  That should be enough to
set you off on a round of cyber sleuthing.

Do you know much about amateur radio?  Fill us in.

>A better question would be -- What CW operating have no-coders done?
>Have you ever worked a no-coder on VHF/CW?

That is not a better question in the context of the original premise that if
no-code folks are allowed to use CW without being tested, they will foul our
nest.  I think my original question is more apropos.

Your question, however, is a good answer to my question.  The answer is that I
don't think so.  This pretty much demonstrates that people don't operate Morse
code unless they know the code, so they won't be causing anyone to "stumble"
over they on "our" bands.

What year do you estimate that the last Morse code QSO will take place on
Amateur Radio, Larry? Can you explain why you believe that year will be the
one?

>> Do you feel that the mode has so little value to ham radio that no one
>> will learn it and use it unless it is tested?

>Asked and answered, many times.

Yes, you have; you do not believe that Morse code can survive without
government support and welfare through an affirmative-action testing program.

>How many of them have joined the ARRL as of today?

I don't know, Larry. I was a ham (off and on) for about 20 years before I
joined ARRL. Maybe that gives me a different perspective on new hams' joining
and supporting organizations.

Is whether they are League members really more important to you than the fact
that there are 37,980 new hams?

"Privatization" was the governement buzzword of the era. I think that the
major social forces that were sweeping the country were a bit more influential
on the FCC's decision than the fact that one ham published some reasonable
accurate "question pools."

>Naw, you didn't figure it out at all. I was in QSO when the PSker
>landed on top of us and flailed away, clueless.

If he was able to conduct his QSO, you were outside of his necessary bandwidth. He was probably outside of yours, but many hams cannot copy a CW signal if another signal is less than 100 Hz away from the station they are trying to listen to. I am good for about 20 Hz separation on a good day, but I find it very fatiguing and I don't enjoy it.

Now, you have cited a case where a PSK-31 signal jumped on top of you. How many times has that happened compared the number of times that another CW signal jumped on top of you.

>I on the other hand was (or easily could have been) running
>my Tuna Tin Deuce and a single stage regen. So now who has the

>In the 50s it would be unthinkable for most hams to send a rig
>back to the factory to be fixed. Today it is common place...

I think that hams of today are under the impression that the factory will do
component-level troubleshooting rather than replace the board that the ham
could have replaced directly.

I own an old Ten Tec OMNI D, built in the early 80s.  Do you think most hams of
that day would have fixed it themselves, or sent it to the factory?

Yup - same as before.

>The number of steps required to get there have been reduced, with each step
>being more difficult than it was before.

Nope. The number of steps has been reduced, with each step EASIER than it was before.

>The Technician with HF endorsement
>is now the entry-level HF license -- how much harder is is than the Novice
>used to be?

It's easier than the Novice used to be.

The above are based on taking practice exams on the qrz.website - both the old ones and the new ones.

> Is this your idea of a 180-degree phase shift?

Not at all. It's just a continuing trend that's been going on for 20-30 years.
.
>
>I have said often that I believe that amateurs need to learn more about
>modern radio technology; you have disagreed with me.

Well, I agree with you, Ed. Learning is a Basis and Purpose of the ARS, I think.

The big question is whether the learning needs to be heavily "incentivized" by

the license tests, or not.

Just to keep track, I thought we could use a list of classes of people that irritate Larry, as evidenced by recent NG postings:

(1) Hams who haven't taken a code test (e.g., not "Real Hams").
(2) Hams who have an Extra without a 20 WPM test (e.g., "PseudoExtras").
(3) People who think (1) and (2) are real hams/Extras (e.g., "Politically Correct whiners").
(4) Ten-Ten members. ("Collectively, proof that any idiot can pick up a microphone and talk.")
(5) Everyone at ARRL HQ except Ed (although stay tuned: Ed is teetering on the brink).
(6) "The majority of hams utilizing 'high-speed digital modes.'"
(7) "People hired under Affirmative Action programs."
...more to come, no doubt. That's only a couple days' worth.

We could shorten the list dramatically by just making it:
(1) Anyone who's not Larry.
But that wouldn't be as much fun!

Jon

Nothing said about it in the ARRL HQ rumor mill, nor were there any memos that if Larry shows up at HQ we should all hit him with a stick. In fact, such activities are pretty much forbidden by some general policy in the ARRL HQ employees manual.

If that is the only way you can learn and pass a test, why are you so critical
of others who you believe are doing the same thing.

Tell you what, how about we give your a 400 question test on the subject and
you can tell me how easy it was and whether you learned anything studying the
right answers.

Depends on which rig I use. I have a few which have 1 or 2.

Let's
> assume 10,000 per IC and count from there. The microprocessors and RAM etc

> probably have quite a few more, but that will be offset by some of the IC

Not many PN junctions in a Vibroplex or J38!

But we all know that none of those many active devices are necessary to
run radiotelegraphy, don't we? It really in thoughtful of manufacturers
to see to it that CW mode is preserved on all these newly manufactured
rigs, though, they must know what Real Hams like.

As you well know by now, so do I- Just as long as they don't jump right over and bypass the basic modes as well.

If one wished to maintain the communications mode which would be likely to be useable under the widest range of situations and conditions, would he not decide to keep the most universally available, easily implemented mode, at least as a reserve? Why is that so obscure a point ot view to so many techies? Agenda time again?

I sereiously doubt it. You meet and converse with seek out your services and those of ARRL. For every one you contact there are many thousands you never know about. No one I know personally has had contact with you. ARRL memebeship amounts to less than 25% of US hams. I don't think you know that much about the majority of them.

I'm afraid the facts are, pretty much as always regardless of your
selective memorizing, that the engineer-hobbyists who are also hams will
-again; as always, be1 the portion of ham who do "leading edge" design.
It has never been different except that once it was much easier for an
```

ordinary individual to learn to be a communications (radio) engineer.

And the output of the Kachina is undistinguishable from a non-DSP rig. You say we must do it because someone can. Not because there is any compelling reason, such as was the case when SSB surperseded AM. Anyone who listened to 75 meters in the AM days when the band was a massive series of heterodyne squeals as cinoared with the relative order of SSB there later knows. There is simply no way to compare that change with

DSP.

 You're not telling me anything I don't alrady know. You *are* showing how ham radio is being morphed into just another internet style gabblegibberish mishmash. About the same thing happened to VHF packet radio, and was gthe exact reason I and many others abandoned it. All the "visioaries" insisted on converting it into something virtually useless and at once dull and uninteresting, just to persue some elusive uneeded "efficiencies" which mean nothing whatever to the individual ham radio operator and only served the agendas of the perpetrators.
 No one **EVER** suggested that hams should refrain from learning about new technolies, and code supporters have repeatedly stated that from the outset, along with strong support for current modern tests. WE DO RESIST the continued assertion that we must "modernize" by dumnping everything that interests us just because it might have been around longer than the latest digital dream. We've listed dozens of other objects which are also obsolete, and are still in universal use today, but that makes no difference.

 It is clear that the entire movement to "modernize" is nothing more than another push to get rid of the code. And a very lame one at that. We are already modernized. And we refuse to be intimidated or browbeat by those who want their agenda to prevail.

Why would you say that, Larry. Ed and I have nothing to whine about.

> Whether or not people will learn

What a strangely false statement, Larry. If Morse code has enough value,
of course people will learn and use it.

> And none of these other modes require the physical development of
> an operating skill which requires a great deal of personal motivation,
> dedication, and perseverence to master.

So you are saying the value of the return on investment for Morse code
is too low for the cost/effort involved. You might be right, Larry, but
Ed and I disagree with you. Only time will tell.

> you saying I am in?

No I have NOT disagreed with you, rather I have agreed with you. But I gotta tell you-- If ARRL(or anyone else) wants any serious numbers of hams to learn the advanced techniques it will take more than just haranguing and a few references in the Handbook to do it. There must be an effort that involves a lot more than lip service. I'd suggest the BOD start a true basic level educational initiative to do just that. Start by cocmparing the basic level differences with a a conventional superhet then a ground-up model of a DSP radio transciever, on the most basic operational level that will function, then publissh the whole thing in a series of magazine articles- and NOT in QEX. Most of the hams who are not techies don't get QEX. A book wouldn't hurt a thing. With all the yelling at us that goes on here SURELY there are plenty of experts that could handle this in stride - aren't there?????

Bottom line, all this noise is just that so long as it isn't followed by actual movement to accomplish. It really becomes mundane, all the "we gotta modernize" stuff with nothing to back it up.

I am primarily an experimenter and rarely operate. Most of the hams
I know who are primarily experimenters were Advanced class hams.
There simply was no need for an Extra license.

We'll take it even further - lids are OK as long as they are willing to
learn. But space cadets, well......

Just shows how little you know about human psychology, Larry.
Anyone who gets annoyed on a news group is choosing to be
annoyed. The basic question is: Why do you choose to allow
people to annoy you on a news group?

I haven't looked at the Tech exam but I seriously doubt that it is easier
than the Novice exam I took in 1951 which was based on only 33 total Q&A
in the ARRL License Manual. I memorized it in two hours.

The great majority of people who don't know Morse code don't consider
it to be universal or easily implemented. If you want to use Morse code
for emergencies, Dick, by all means do it. Most of the rest of the world
has given up on Morse code for emergency use.

????? Wake up, Ed. He compared a 5 watt CW signal with a KW SSB. Then
he said one major advantage of CW is the fact that you don't need high
power, while most of the SSBers use it anyway, words to that effect.
That means that CW is the less robust mode? When you can clearly copy a
CW signal at levels where SSB voice is totally unintelligible?
  Fellow, you're beginning to sound like this is getting to you, you're
losing your technical edge. Why?

I doubt that's true, Dick, but if it is true, then the Kachina is a
poorly designed DSP rig. Properly implemented DSP is better than analog.

So we hams should deliberately become a case of arrested development
in the electronic dark ages?

> It is clear that the entire movement to "modernize" is nothing more

No one wants to get rid of the code, only the code tests. What we are
advocating is that hams know as much about modern modes as they know
about CW.

> We are already modernized. And we refuse to be intimidated or browbeat
> by those who want their agenda to prevail.

Spoken like a true knuckle-dragging Neanderthal, Dick. Latest theory is
that the Neanderthals were absorbed into the Homo Sapien line. You seen
to have got the majority of their genes. :-)

Correction noted. Please advise the webmasters at the Macon site...they only indicate the last five numbers.

>> Previously, Robeson stated that he took the purchasing agent job because of "burn-out" from nursing. Now it is revealed that he works as some kind of temp (?) nurse after regular company hours? Inconsistency there or a lack of full explanation.
>
>   I said I took the job to "take a break", Lennie...NOT to completely disassociate myself. Of course, not having never held a job that had such responsiblity, I doubt you can "relate".

As a design electronics engineer, I've had as much responsibility as any other design electronics engineer. That can run to several tens of million dollars on a project. You can find my name in the approval sign-off block for the drawings of the AN/ASM-416 Test Set, as one example.

How can you possibly "know" what I've done in the aerospace community over the last 46 years? Have you checked with my past employers? I gave you a list of them. Have you checked with the two radio amateurs who I've included as personal references? Have you bothered checking anything at all?

I don't think so. All you did was make a blanket accusation cum insult based on personal rage. Tsk, tsk, not nice.

>> There is also some curiosity as to why someone has to travel about 170 miles or so (3 hours driving time) away from home when there most certainly are some electronics-radio related companies in the Tennessee area closer to Dunlap.
>
>   Ummm....unfortunately, not at this pay scale.

Chatanooga has no electronics industry? Nothing closer than 3 hours distance? Seems strange considering the east coasters

have been bragging for years about being the center for all the
"good" industries. :-)

Purchasing agents must be making bundles of money now!

Just think what you could do with a little hard work and study
to get an engineering diploma...you could be making bundles
upon bundles of money and specifying what purchasing buys
instead of placing orders. Of course, that wouldn't be
amateur work anymore. Engineers get "tested" every day in
design and the only certificate/diploma they get for that is a
continuing paycheck. Not a callsign you can use for bragging
rights but you can, literally, take it to the bank. :-)

>   Nope...just you. You deserve it, since YOU have been trolling

You cannot accept that another persopn has an opinion, even if you
disagree with it. You must pronounce it wrong. That is my perception
of your arrogance. No need to tell me I'm wrong...

> You've left out an important word prior to the words "other hams".
The

I stand corrected. Good Ops or not, you're rather shitty to SOME other
hams on here. So are SOME of your Good Op friends.

> I give as I get generally. I think most people do.

Count me in. Now think about that.

Thank you Dave, I will. A few weeks ago I spent about 3 or 4 days
acting exactly like Dick Carrol. Everybody hated it. Now I'm back to
me, and only SOME people hate it.

Does Squiggy have a name, or is it that you find it easier to imagine
him dead if he had a cartoon name and an apple in his mouth?

Dave, you'll notice that "Good Op" and friend, Hans Brakob, K0HB, did three minutes of -sleuthing- and came up with Steve's employment information.

Is Hans also an aging cyber-stalker?

What's peculiar is your fixation with the imagined transgressions of only certain (as in SOME) members of this group, and the others (as in SOME) receive a free pass.

>Squiggy doesn't have a fist, he couldn't communicate with dots &
>dashes if his life or anybody else's life depended on that ability

Actually, at one point, Carl was approaching 20 wpm. He could certainly manage a code QSO today, though he has not accepted my invite to do so.

Maybe I will have to be him a lobster dinner that he can't. :-)

>he advocates elimination of all subands,

The US is one of few countries that has actual sub-band allocations; they sort themselves out by band plan. His basic recommendation is that the rules say "these are your bands; stay within them." Unfortunately, what works in some countries would possibly not work in the US. On 160 M, for example, the band plan for CW operation is regularly stomped on by phone operators, some who know better; some who do not. I think the same mentality that drives the Know Code = no Ham spams would show up with a small, but very noisy, group, who could make it rapidly unworkable. Why, even our Cecil wanted to engage someone in a 5 wpm QSO in the DX windows, just because he can.

>he advocates the use or wideband
>digital modes on the HF ham bands

I think that some FHSS needs to be permitted on HF. He wants to give it carte blanche, however. Is there room for it on 80 M? How about 160M? How about 30M, where some commercial stations could be already using it? How about 10 M?

>and he goes off on anti-cw rants at
>neighborhood ham club meetings

He has said here a number of times that he doesn't believe that CW use should be abolished at all. Does he say different things at club meetings? He may be swept up in the easy trap of having to tear something down completely in order to justify change. There are some here who say some pretty bad things about CW to justify keeping it.

>But..but what about the Wouf Hong? Has it been retired?

It is in a case, inside a glass cabinet, in the Hallowed Hall (there is only one hall that is Hallowed, contrary to rumor) on the first floor of ARRL HQ.

I will confess to you privately (don't tell anyone) that over the years, the method of its application has become lost to us. Many visitors have offered suggestions -- hitting over the head, as Larry suggested, cracking of the knuckles between the two sections, and a few suggestions a bit more colorful.

>It has never been different except that once it was much easier for an
>ordinary individual to learn to be a communications (radio) engineer.

Dick, there are tools that are readily available today that let ordinary individuals do things that engineers of old found difficult. I can predict quite accurately the performance of a multi-element Yagi antenna with a few minutes programming. I can optimize that antenna in another few minutes for maximum forward gain, F/B, feed-point Z or any combination thereof. I can predict the propagation between W1 and central India using another free software program, or can design an amplifier using free design software.

I disagree that it was much easier to do these things in 1963.

>> I subscribe to the concept that more hams need to learn the fundamentals of
>> modern radio technology.

>As you well know by now, so do I -

I am glad to hear you say that. I was hard too see from your choice of words
like "boring," "rammed down my throat" and "Agenda."

> If one wished to maintain the communications mode which would be
>likely to be useable under the widest range of situations and
>conditions, would he not decide to keep the most universally available,
>easily implemented mode, at least as a reserve? Why is that so obscure a
>point ot view to so many techies?

It is not an obscure point of view to me, Dick. I believe that Morse code CW
use should be permitted on the ham bands. I believ that the "most universally
available, easily implemented mode" will continue to be a valuable asset to
Amateur Radio, irrespective of whether it it tested. I think it illogical to
assume that the "most valuable" of all modes will not be used by hams unless
they are required to learn it to get a license.

>Agenda time again?

Oops, now I am confused again. There is that "Agenda" thing.

>> I am quite aware of the present technical status of hams, Dick; I spend
>> about 2 or 3 hours a day on the phone, answering their questions.
>> Most of them don't share your "can't do" viewpoint.

>I sereiously doubt it. You meet and converse with seek out your
>services and those of ARRL.

Are you really offering that those that call me on the phone do so because they believe they "can't do" whatever it is they are asking me about? I fail to understand that logic, Dick.

Secondly, please forgive me for not also explaining that my contact with hams also includes a lot of travel to conventions, and local club meetings. During that travel, I not only talk to a lot of hams, but I wander around a bit and look at what is going on. I do not see evidence of "they won't learn anything more than what is on the test" as you describe. That is "can't do" and what I see is people doing the doing.

When I go to a local club meeting, generally only the club program director has sought me out. The other 30 people are just there. In what way do you think they are different than the hams that you know? How could I possibly see so much hope and enthusiasm in hams, yet you see none?

> For every one you contact there are many thousands you never know
> about. No one I know personally has had contact with you.

Of the 50 or so people that show up regularly here, about 5 have had personal dealings with me.

But you may be right. Tell me about the personal contact you have had with the many thousands that I have not met. It is quite coincidental that you have met all those many thousands of people, yet have not met the smaller number of people that I have used as my sample size.

> ARRL memebeship amounts to less than 25% of US hams. I don't
> think you know that much about the majority of them.

Obviously you do. Please tell us how many hams you have met and why you think they are different than the hams I have met.

If your contention is that I can only discuss issues if I have met all 650,000+ hams, then I would offer that no one here can discuss issues; we need to shut down the newsgroup.

However, if it is important to you, I would guess that I have interacted with over 5000 hams over the years. Out of those, I do not see more than a handful that I believe are the way you have offered that most new hams must be. Please tell us about the much larger group you have interacted with and why they are so very different from the hams I have met.

Not the Novice I took. I studied 4 pages and passed easily.

>Well, I agree with you, Ed. Learning is a Basis and Purpose of the ARS, I
>think.

>The big question is whether the learning needs to be heavily "incentivized"
>by the license tests, or not.

IMHO, the tests should contain some of the fundamentals, but it is not only not necessary to test detailed knowledge of these subjects, it is simply not practical. Unlike ILP, I don't think that testing is the golden road to learning. I think it is much more important, and much more effective, to have hams learn those areas of technology that interest them; that is going to result in more and better learning, and a lot more enthusiasm for it when all is said and done.

I believe that this applies to Morse-code, too.

Thanks for the clarification. It was hard to tell when you told me that stating
my belief is "harranguing" or "yelling."

> But I gotta tell you-- If ARRL(or anyone else) wants any serious numbers of
>hams to learn the advanced techniques it will take more than just
>haranguing and a few references in the Handbook to do it.

Yes, it will take much more than that. Maybe ARRL needs to put some of this material up on a Web page. Perhaps TAPR should be asked to do the same.

A minute spent on Yahoo's search engine gave me the following (among many others -- perhaps what is needed is a tutorial on the fact that search engines exist):

Spread Spectrum Tutorial:
http://www.tapr.org/tapr/html/ssf.html (TAPR, a reprint from a QEX article)

DSP:
http://www.arrl.org/tis/info/dsp.html

Software defined radio: (This one needs more work, but it is a start.)
http://www.arrl.org/tis/info/sdr.html

> I'd suggest the BOD start a true basic level educational initiative to do just that.

Although they have not yet delved into technical subjects, the ARRL education and certification program is intended to do just that. The ground level of this program started with a discussion board in which ARRL members told the program manager what they wanted to see. Did you get any reaction to your comments when you posted them to that discussion board?

http://www.arrl.org/cce/

> Start by cocmparing the basic level differences with a a conventional superhet then a ground-up model of a DSP radio transciever, on the most basic operational level that will function, then publissh the whole thing in a series of magazine articles- and NOT in QEX.

Maybe ARRL should publish them in QST, then make them available for download on its web pages. :-)

> A book wouldn't hurt a thing.

Maybe ARRL should put a chapter in the Handbook on DSP techniques and publish a book on spread spectrum.

http://www.arrl.org/catalog/?category=Digital+Communications&words=spread+spectrum or go to http://www.arrl.org/catalog and type spread spectrum in the search box.

> With all the yelling at us that goes on here SURELY there are plenty of experts that could handle this in stride - aren't there?????

Yelling? Do you really think that someone saying that he believes that more hams need to learn the fundamentals about modern communications techniques is

"yelling?" That sort of reaction is why I believed that you were in
disagreement with what I said.

> Bottom line, all this noise is just that so long as it isn't followed
>by actual movement to accomplish.

I agree. If there were more of me to go around, and I were more of an expert, I
would be able to do more. Fortunately, there is a lot that has already been
done.
> It really becomes mundane, all the "we
gotta modernize" stuff with nothing
> to back it up.

You are being somewhat critical of this information, at least I get the
impression you feel it is not adequate to teach the fundamentals. Can you be
specific about what about each of the links and books is not adequate and
offer any suggestions as to how they can be improved? I am curious, did you
read this material when it first came out, or just before you made your post?

>of HF voice privileges to the 12/13 WPM Advanced class
>license, leaving the CW DX windows and the 1x2 and 2x1 callsigns
>as the only remaining incentives with a 20 WPM code test
>attached to them.

Not tremendously different than ARRL's proposal and comments, at least as compared to the final FCC result.

>>>My question for you is -- what do you have against striving to
>>>achieve a lofty goal?

>>Do you see everything through the filter of striving, or a lack thereof?

>An even better question would be why do you see nothing through
>such a "filter?"

Although I see some people within the Amateur Radio Service who do not want to learn, it is my experience that the vast majority of hams became hams because they thought it would be a beneficial and learning experience. Admittedly, I don't qualify my beliefs with a caveat that they don't apply to a minority of hams. I do not think it is necessary to do so, but your misunderstanding of

that does disprove the rule. I thought that common sense would have told
anyone that I was speaking from my oveall experience.

> What in the bloody blue blazes is wrong with
>establishing and maintaining a set of reasonable requirements,
>geared toward obtaining practical communications skills, to be
>achieved in order to attain valuable operating privileges?

Nothing. IMHO, the standards are higher than they were when I became a ham.

> Do you really think the clients of the Welfare State will flock to the ARRL
>en masse once the bar is dropped to the ground?

The biggest welfare state I see here, Larry, comes from you. You believe that
Morse code requires an affirmative action to continue to survive. I believe it
can stand on its own.

Do you really think that my personal views are formulated to get the most
number of ARRL members?

>From: Dick Carroll dixie@townsqr.com

>And the output of the Kachina is undistinguishable from a non-DSP rig.
>You say we must do it because someone can.

The Kachina is a good example of a software-controlled radio. Its DSP
implementation is the start of what constitutes a software-defined radio.

As DSP technology improves, and right now, it is good to at least 10 MHz, we are literally going to see software-to-antenna radios. They will be readily programmable to be any mode radio that we want. To make design changes, one will download new code. The FM, SSB, SS, data, digital voice or CW signals will be encoded and decoded right in software.

In the long run, these radio techniques will increase flexibility and interoperability of radios. The FCC may very well make changes in the way that it allocates spectrum and operating authority as a result.

Spread Spectrum is at least as revolutionary a change as was AM-SSB; the former was, at least initially, accomplished by taking an AM signal and running it through a filter. SS and digital voice are more different than SSB and FM than was AM/SSB. Using SS, and/or trunking techniques, the very way spectrum is used in the Amateur Radio Service could be changed. Instead of allocating frequency pairs that are unused most of the time, that block of spectrum could be accessed by multiple users, each with their own spreading codes, thus limiting the use of the "repeater" bands not by the number of potential users, but by the number of actual users. No more "no pairs available" and coordination difficulties. Not as sweeping a change as AM to SSB?

>No one **EVER** suggested that hams should refrain from learning about
>new technolies ...

> WE DO RESIST the continued assertion that we must "modernize" by
> dumnping everything that interests us just because it might have been
> around longer than the latest digital dream.

I will speak only for myself, Dick; I have never suggested that you need to dump anything that interests you. I sure don't intend to stop using OOK CW. If you feel that I have suggested that you need to stop using CW, or even that you personally "must" learn new things, you should read my words more carefully. I have faith that hams will learn this technology if they are given some of the reasons why it is important that they do and given the resources to do so. Very few have taken this as "yelling" or as my telling that that they must dump what they are doing. Very, very few.

>We've listed dozens of other objects which are
>also obsolete, and are still in universal use today, but that makes no
>difference.

Yes, they are in universal use today. How many of them are a mandatory part of testing for any priveleges, amateur or otherwise?

>It is clear that the entire movement to "modernize" is nothing more
>than another push to get rid of the code.

Is that what you think that retired Dale Hatfield from the FCC was seeking to do?

>And we refuse to be intimidated or browbeat
>by those who want their agenda to prevail.

There's that "agenda" thing again. Do you really think that the only reason I say that I believe more hams should learn the fundamentals of modern communications technology is to "get rid of the code?" No offense, Dick, but that's pretty lame, too.

I know. Just like it is easy to pass the written amateur exams today
because of the existance of a public pool with all the test questions
and their exact answers.
Just because you have access to software that will allow you to bypass
knowledge doesn't mean you have that knowledge.

> I disagree that it was much easier to do these things in 1963.

And I said nothing whatever about 1963. The selftrained radio engineers came considerably earlier in most cases, the people who were the creators of much of what we know as "radio". Many, even most had no engineering training at all.

> Whew: Thought for a minute that you might be back.

Kim, W5TIT, is the only person I know of who could, with all seriousness, actually post a note in a newsgroup stating that she's not back in the newsgroup. See, Kim didn't actually post that message - her other self (W5ASS) did it for her. ;-)

Not only that, but she doesn't seem to know that it's February (not January 1st). Or, perhaps she is still celebrating, which might also explain why she didn't know she was in this newsgroup.

Perhaps Jim needs to talk to the USCG about people's lives depending on one's ability to send/receive dots and dashes. Once he clears that little hurdle, perhaps he can convince the FCC to restructure yet again, and ingnore the upcoming WRC-2003. Kick the requirement back up to 20wpm AND mandate 20hrs of CW use per month to keep your skills current.

That will ensure that the ARS will be prepared to be the life saving service that all of the other professional life saving services aren't.

Furthermore, I don't think that whatever Jim had in mind that would prevent Carl from making it back ("Don't bring that sumbitch to Bookbinders for the RV/EY lobsterfest, he'll never make it back to Allentown") is appropriate behavior between hams whether on the air or here!

You, Dave, and other "Good Ops" -always- pass on critiquing such inappropriate threats. Why? I find it totally unacceptable.

> Maybe I will have to be him a lobster dinner that he can't. :-)

Excellent bait. I've never understood using perfectly good shrimp or delicious squid to catch a fish, but lobster to catch a "squiggy?" Thats probably about right.

I think we're about there. But it isn't just the code issue, its the "I've been a ham for X years, and I own the ARS" mentality that we encounter form supposedly "Good Ops" right here on rrap.

> Why, even our Cecil wanted to engage someone in a 5 wpm
> QSO in the DX windows, just because he can.

Is it inconceivable that the DX station is only good to 5wpm? Certainly if a station from North Korea came up at 5wpm, you would engage in a 5wpm QSO in the DX window - just because you can. Or would you send at 35wpm - just because you can?

Now that 5wpm has become the standard for testing in America, there should be no problem trying to cantact even a DX station who is sending at 20wpm. If the DX is a good enough op, he'll match the speed for the qso. Or should he ignore the 5wpm station? Is this a fraternity, or only a clique.

I haven't called any names, cussed at anyone, or presented anything
improbable. Now watch as these "Good Ops" assasinate my character and
try to put me out of business.

With a Ham Stick or a Terlin Sick (the one with the flailing "wander leads")?

;)

Len, better lighten up before the all the "Good Ops" start threatening to do you bodily harm.

Sorry, inappropriate reply.

I don't know that I've ever worked a FIST.  They don't usually volunteer
their FIST number while on phone, do they?  Maybe they should.

I'm certain that I've never "worked over" a FIST.

That is basically because you say something then explain it in terms that change the meaning of the original statement (not just you, all the "we gotta modernize the ARS" mavens). You say that, then next it's "Hams can learn the bsics of ....". Which is it? Tell us again just how it is that ham radio is NOT today modernized. Because we don't use (and have absolutely no need to use) spread specgtrum?Because SSB and CW and a few digital modes most of which have been around awhile seem to serve the ARS's neds quite nicely? All this "we gotta modernize" talk appears to be mostly lip service to some Technology God who will surely smite us all if we don't submit to The Agenda.Sorry. It just doesn't compute. Cecil is dead wrong when he says that DSP is the SSB of the 50's. It just isn't so. There WAS a desperate needd in the 50's and 60's to relieve the congestion caused by the predominance of AM stations on the ham HF bands, and that was clear to anyone who ever tuned across one. The heterodynes were inescapable and a low powered AM station didn't stand a chance againse them. SSB eliminated the heterodynes and allowed much more simultaneous voice activity without the constant interference and the need to run high power to suceed.

But to insist that SSB be abaindoned in favor of digitized voice on HF-whatever the mode, just becase it is technically possible, is ludicrous and most hams know it, if they know anything technical. And there is some question that the fact that so many do not is one avenue of success by digital proponents. When people know little about the subject it's much easier to convince them that "change" is really necessary when it truly is not.

All the "modernization" talk is centered on modes alone, and totally ignores the vast technical advancments we use daily. There is simply NO comparison between the rig I use now and the simple transmitter that I put on the air in late winter of early 1957. That simple two tube homemade transmitter was really labor-intensive in operation compared to the one I use today, where I touch one button to select the band, touch it again to select one of three stored frequencies in that band - with the mode for that segment already stored- and since I have the "autotune" button already selected, I don't need to either tune the rig nor even tune the antenna! Simplicity and modernity personified! It IS almost boring!

And the differences in the receivers is beyond comment. The surplus single-band WW2 bomber receiver I had to start out was close to the bare minimum, but its wide bandpass tought me operating skills that probalby wouldn't have been learned any other way, in digging a single signal from out of the bedlam- with the filter between the ears. instead of in the rig. These are skills most new operators never develop.

No wonder so many of us also keep some old stuff around and also homebrew "Hollow State" ham gear. Sorta makes one feel like a REAL ham radio operator for a change. Yeah, things change, and for the better. But not always!

> assume that the "most valuable" of all modes will not be used by hams unless
> they are required to learn it to get a license.

IF there was any way to impress upon beginners that fact without them learning for themselves about radiotelegraphy, you would be correct. Unfortunately that is not the natural progression.Few who haven't experienced it can personally realize how "valuable" Morse is as a low tech, purely useful method of simple basic communications in a high tech world.

Virtually no beginner starts out eagerly volunteering to learn Morse code just so that he has it at his disposal. It is almost universal that it is learned for the purposes of qualifying for the ticket and enroute learn its true charactersitics. When that goes away, the mode goes away.

That is wrong from any perspective except that of the Carl Stevensons of the world. You can believe that he got "close to 20wpm" if youwish, just because he says it doesn't make it so. I seriously doubt he could recovnize his own callsign. It is perfectly clear from his ravings what his real intent is. And it isn't "live and let live".

Ham Radio and Code.

Has the archaic code requirement been removed from Ham Radio testing yet?

Agreed! But not nearly so easily as they could listen to AM.
>
>>the unskilled SWL probably didn't know to turn on the BFO,

I didn't mean to underestimate anybody. Only point is that there was a lot less serendipitous discovery of ham radio once SSB began to seriously displace AM.
>
>>Eventually home computers and internet connections
>>will be as common as TV, if not more so.
>
>Eventually TV and the Internet will be the same thing...

You got THAT right! In fact, some radio stations and networks simulcast on their websites. TV tuners for a PC have long been available. Between cable TV and highspeed 'net connections, how long before more people are "watching TV" on their computer monitors than on their "TV sets"? How long before the RF connection disappears entirely for most people? Not long in most urban/suburban areas.

At my old house, I could see the "Roxborough antenna farm" from my second-floor bathroom window. True line-of-sight! Most of my neighbors had similar paths to the TV broadcasters. I could get no less than a dozen TV stations using rabbit ears - yet almost the entire neighborhood was on cable. At my new house, the reception is almost as good with the rabbit ears, but I'm the only one without cable. That may change soon, because the township meetings are on cable.
>
Next step is to replace the cable with fiber. TV broadcasting? Practically obsolete.

I've never encountered a 10-10 member on 10-meter CW; however, if
I did, and I wasn't able to give him my number, I'm sure I'd receive the
same kind of disparagement as I received during my very last 10-meter
phone QSO with a 10-10 member!

Ed:

Well, you're entitled to your own opinion. I, however, am a realist when it comes to human nature, and I believe the only thing that would keep CW going is a code testing requirement attached to progressively higher HF operating privileges on all modes. I've never said anything else. I've never stated that "Morse code can stand on its own." I don't believe that it can, or ever did. And I don't recall ever saying so.

>Do you really think that my personal views are formulated to get the most
>number of ARRL members?

I think that if I were your boss at the ARRL, I'd be monitoring every byte you post here and anywhere else, and if I ever caught a whiff of anything that wasn't clearly geared toward forwarding the business goals of the organization, I'd fire your funky ass out the door with a cannon! I don't think you'd dare post anything that was even one degree out of phase with ARRL organizational policy. As the old saying goes, "We live in a democracy, but we don't work in one." That applies to you just as much as anyone else. To me, you are nothing more and nothing less than a fully in-the-tank ARRL spokesman and cheerleader when you post in this newsgripe. And if you're not, and you value your job, you're a fool!

T. L.:

I could care less whether or not you post a callsign; and for the record,
I could care less if you are an "Pre-Resturcturing" Extra or a newly-
licensed Technician. You identify your posts with your name, for this

or any newsgroup, that is sufficient. At least you are not hiding behind some fictious "screen name," or so it seems -- but I'm inclined to give the benefit of the doubt when I see a "real" looking name. However, in these dumbed-down days of ham radio, any idiot can get a license and a call sign, so I have no need to see yours. Never think you need to post it for my benefit.

>What year do you estimate that the last Morse code QSO will take place on
>Amateur Radio, Larry? Can you explain why you believe that year will be the
>one?

Ed:

I'm not sure that there will EVER be a 100% elimination of Morse code use on the ham bands. I even think its possible that in a total no-code testing requirement licensing system, there may even be a few hams that learn the code out of their own curiosity, interest and initiative. The numbers of active CW users will certainly decline in the absence of the testing requirement, but there will always be a few CW users hanging in there.

>>> Do you feel that the mode has so little value to ham radio that no one
>>> will learn it and use it unless it is tested?

Like I said, a few will -- but the numbers will be a tiny fraction of what we would get if the requirement remained. This has nothing to do with the value of the mode -- it has to do with the fact that learning the code requires an unusually higher level of dedicated effort. Everyone knows how to talk, and typing is a more common skill than Morse code proficiency. Therefore, you need to compare apples to apples, and stop hauling out your oranges when apples are being discussed.

>>Asked and answered, many times.
>
>Yes, you have; you do not believe that Morse code can survive without
>government support and welfare through an affirmative-action testing program.

And I think you and I don't have a common understanding of the meaning of the words "government support," "welfare," and "affirmative action." Please give up the Cecil Moore impersonation, Ed, it doesn't become you.

In article <3A85712F.B4500C74@IEEE.org>, Cecil <Cecil.A.Moore@IEEE.org> writes:

>
>The great majority of people who don't know Morse code don't consider
>it to be universal or easily implemented. If you want to use Morse code
>for emergencies, Dick, by all means do it. Most of the rest of the world
>has given up on Morse code for emergency use.

Cecil:

That's true -- and the reason is that it requires an operator to learn and gain useful proficiency in the skill of sending and receiving Morse code! Now, when you're talking about commercial or military utility communications applications, this means the expense of training, paying, and providing benefits for flesh-and-blood radio operators. If I owned a shipping line, I would probably want to eliminate that particular part of my overhead, just as much as anyone else. Therefore, ships at sea and land-based communications facilities depend on expensive, computerized communications systems instead of human radio operators.

Amateur radio does not have these economic considerations, but we still have to deal with the fact that learning and gaining useful proficiency in Morse code still requires a considerable amount of dedicated effort on the part of the operators who wish to use it. In the past, this effort was motivated and incentivized by the promise of increased operating privileges; now that that incentive has been removed, there will, for sure, be far fewer people even bothering to learn and gain useful proficiency in Morse code.

The Morse/CW mode continued to survive and flourish only due to the code testing requirement. In the absence of the requirement, the numbers of Morse/CW mode users will most likely shrink to a small fraction of their present numbers, at least in the United States. European/Asian/African operators don't seem to have as much of a laziness problem as we Americans do.

If you spent a half hour per telephone contact, 8 hours per day, 5 days per week for 52 weeks per year, you'd talk to 830 hams.

>

If you attended a hamfest or club meeting every week for 52 weeks and talked to 30 persons per meeting you;d talk to 1,560 hams in a year. All in all, not any overpowering percentage of licensed hams.

> How could I possibly see so
> much hope and enthusiasm in hams, yet you see none?
>

Once again, you misstate my position. That is not at all what I said. I said that you don't see all the hams out there who just want to be hams, and don't have the training nor the refined technical skills to get involved in your mission of "high tech for the masses", nor will they ever get very deeply involved in it for that very reason. It is NOT a simple matter and everyone except the promoters of the Agenda know it.

Oh, the Agenda is not a formal document nor even a clearly stated position, it is just an attitude. It basically says, but certainly is not limited to, "get the ARS away from CW specifically, and into the world of high tech, never mind anything else". It ignores completely the practical aspects that characterize almost every ordinary ham. He wants to use ham radio as he recognizes it, which is to say that it IS an evolving and improving entity, and he intends to be a part of that evolution and improvement. He does NOT believe that just because inventors working for the telephone company have found that spread spectrum techniques find favor in use as cordless telephones that he must line up and follow suit. He sees that is pure techie nonsense, and recoginzes it as what it is - an attempt by a few hams and others whose interests are in little except development to trump his own desires and best interests. Cecil Moore said yesterday that his interest is in experimenting and he rarely gets on the air. That's fine, but it also shows that his interest is driven by something other than that of the average ham.

Of course hams need to learn more about advancing technology. It won't happen effectively until people who develop these systems who are able to explain them in terms understandable to the average ham who knows little or nothing about those techniques and little about technology at all.

THAT is the challenge. I and othes have raised it several times here in recent years, to do it, and explain what you're doing, or get off the soapbox. So far I've seen nothing that I would call progress. A single text explaining in simnple detail, it that is possible, the basics of the new technologis would go far toward educating the masses of hams. Most I know would spring a few bucks for such a boot. If they could find it. Instead all they get is criticism.

> > For every one you contact there are many thousands you never know
> > about. No one I know personally has had contact with you.
>
> Of the 50 or so people that show up regularly here, about 5 have had personal
> dealings with me.
>
I would guess that I have interacted with
> over 5000 hams over the years. Out of those, I do not see more than a handful
> that I believe are the way you have offered that most new hams must be.

Of course not. You see those basically who want to see you and hear what you have to say. Others are busily doing other things that interest them. I will say, you are probably the biggest crowd draw that Newington has to offer. When a crowd of hundreds or more producesd an audience of 50 for your presentation that means that you won't be exposed to the attitudes of aa pretty large majority.

Please

> tell us about the much larger group you have interacted with and why they are
> so very different from the hams I have met.

Ed, I live out here among them, talk to hams almost daily, have hundreds of friends and contacts that have persisted for many years, and spend a LOT of time on the air, mostly listening to others. You on the other hand spend your time in the ivory towers of Newington. I can easily see that you inhabit the ground floor, as you are in fact one of the most practically minded ihabitants. But the fact remains.

Surely you understand that the people that gravitate to your presentations at hamfests are the subset of the much larger crowd attending the event,those who happen to know you, or of you, and are particularily interested in what you have to say,but they represent a small percentage of the attendance. Far more wouldn't know you from Adam, I'm sorry to say. Atg that, you're probabaly the best known Newingtonite.

If I attend a hamfest where you appear I'll be in the group you address. A great majority of ordinary hams will not. Some will be interested in your RFI work. Some will skip because you are a part of the movement to "modernize" ham radio away from their interests, and they don't support that. Not many hams believe it is in their best interests to cause the ARS to implement such modes as spread spectrum nor univesal digitized voice especially on HF, since the bands are not unduly congested and the "cure" is just as likely to be much worse than any perceived ailment.

Many of these same hams believe it is a travesty to allow radiotelegraphy to atrophy to the point of uselessness just to allow easy entry into ham radio, and believe that this is a part of the movement to force ham radio into accepting modes that are commercially invaluable but which have little or nothing to offer to hams in practical application. Not much is known about their actual effects on the HF ham bands. Many hans just don't buy the assertion of many in your movement that ham radio must abandon our older but very reliable and utilitarian modes for no reason other than the fact that commercial engineeers must constantly come up with "new and improved" versions of everything, else they find themselves unemployed. Yes, we heard, "no one is
insisting that we abandon anything...". Just what does "modernize" mean as used in all the rhetoric, then? That, to them, is the thrust of the urge to "modernize". What else could it mean? That just because there is utility in using spread spectrum techniques in many communications venues that we actually need it in ham radio? I don't think so, and neither do they.

ARRL recently affirmed that it is not seeking to change its policy wrt the US code testing requirements. Do you believe from my posts here that my personal view and that policy are identical?
You can rest assured that, as an ARRL employee, I will not take one single step with the FCC in contrast to the ARRL policy position, but as a free individual, I see no conflict in posting my personal views, the reasons for them and discussing those views with my fellow amateurs, just like you do.

Do you really believe that ARRL employees should not enjoy the same free-speech rights as other US citizens? Otherwise, you seem patriotic; why the difference for me?

I have posted quite a bit on this subject in the past, in a way that I thought said pretty clearly to what extent I feel what I say is shaped by my employment. Did you not read them, or think I was lying?

Hello Jim, I'm not familiar with archaic code, but the Morse code is
still a requirement in the USA and Canada. Go ahead and learn it
because you now get some ROI, but don't plan on using it at 5wpm.
That's frowned on.

Paul, have you ever worked WD4GDH?  He was a shipboard radio officer
till he jumped ship on Guam to work for the one of the USN's big
transmitter sites.  We did JOTA for the Scouts in 91.

OK, but my kids will be pissed about getting Code Quick for dinner
this Friday night. Maybe if I put cheese on it. Sounds like I need to
support the hobby to the tune of another 35 sheckles (as Dick calls em).
 Maybe I'll have that QSO with N2EY before 2027AD when I retire.

TL, while its fun to drive an antique car, I don't think it should be a requirement to be licensesd drive a modern automobile. Manual choke and dwell can would leave most modern motorists stranded by the side of the road.

Even Cecil's website shows him (and daughters) dressed up in period Cowboy (and cowgirl) garb. I imagine that it was a lot of fun. Ditto Morse code. Probably a blast if you're any good at it, probably sends rivers of sweat if you're not.

But to require it to operate any other mode on HF???

I can buy the passing out part. Go easy on the Guiness and Mead.

BTW, who are the other "Gods" you're getting drunk with? Do they fit
Dave's definition of "Good Ops?"

Hey, any time I've called Ed on the phone he has never given me
1/2 hour of histime. Am I not getting my monies worth from my
ARRL membership? :-)

>> Secondly, please forgive me for not also explaining that my contact with hams

>All in all, not any overpowering percentage of licensed hams.

I've seen Ed talk to hundreds at a hamfest. To suggest that
someone like Ed would only talk to so few people in a hamfest
setting is a joke.

>> How could I possibly see so

Dick must have some special dailog with all those "other"
folks that Ed and the rest of us never meet.

And...there's that "agenda" silliness once again.
What agenda Dick?

> Oh, the Agenda is not a formal document nor even a clearly stated
>position, it is just an attitude. It basically says, but certainly is
>not limited to, "get the ARS away from CW specifically, and into the
>world of high tech, never mind anything else".

Gee Dick, I must have skipped that chapter in my ARRL
manual and the FCC part 97.

>It ignores completely the

Well Ed...I guess if you don't have an SRO crowd then
you aren't doing a good job for us. All those others that
don't sign up to hear your talk just have no need for
it because they march to the sound of a differnet drum...which
only Dick knows about.

> Please

>neither do they.

Dick... modernize is eactly what hams have been doing
for decades. The fact that some wish to still use (and enjoy using)
older technology is their personal choice. The problem for hams
as a large group would be if hams as a majority took such
old technology approaches. It's that simple. Many hams
migrate to new technology as the new equipment finds its
way to commercial availability. That too is nothing
new.

Cheers,
Bill K2UNK

Hey, don't ask me. Take it up with your "Good Op" Hans. Here's what HE
said:

"I like all those ideas, Jim, except the one about publicizing the Fists
freqs. I've abandoned any operations anywhere near xx.058, because once
a Fists member "collects your number", the contact usually comes to a
quick conclusion.

 73, Hans, K0HB
 Fists # 7419 (I think)"

Even then it is likely that the FCC will ask that the applicant be retested by
a VEC, either by specifying the VEC or by making a stipulation that it be a
different VEC than coordinated a questionable test session.

Now come on Ed.  You speculate that Len gets "far afield" when he uses
caps, but cannot speculate why Steve uses caps?  And I thought you might
be a little more fair handed than some of the other "Good Ops" on here.

Seems to me that's a little premature in judgement. Maybe if you'd worked the ten required stations and applied for a membership, you wouldn't feel so negative about it.

Lots of junk yard dogs in ham radio, it would appear. Perhaps the chest pounders can get a gig on the WWF. Maybe they'll go back to brass pounding.

Larry, you do seem to have a lot of trouble getting quality QSO's on the
radio. I recall you're impromtu SET. Perhaps if you weren't so
offensive...

Tell you what, I'm going to hook you up with the Spring 10X CW Contest.
Here's the info:

SPRING CW Contest: May 5-6, 2001

Logs due by: May 21, 2001

Logs to: Linda C. Kelchner, KC4SWY
Possum Trot Chapter
9946 Rockfish Road
Raeford, NC 28376-7036

Be sure to use a dupe sheet, and don't send QFU to anyone.

>and ARRL. The repeater situation should have never been allowed to
>degenerate into the sort of situation where all pairs are tied up while
>there is mostly silence on those bands, and much of the activity one
>does hear makes you want to turn off your HT.

The problem is not even one of certain repeaters being off the air completely, but the pair not relinquished (although that does happen). What about the repeater that really is used once a month for an on-the-air club meeting, and a few minutes here and there. That can be an important use of a repeater, and I think that it is apporopriate to accomodate it. THe problem could be that there are more people who want to do that than available pairs, so some cannot get access to repeater spectrum at all.

> But of course your discussion above addresses VHF/UHF, and not HF where
>there is simply no reason to even consider such a change-unless it is
>considered to be necessary just because the modes in use on HF must be
>considered old and obsolete, thus unusable.

The modes on HF may be old, but I do not consider them to be unusable at all. IMHO, the strength in amateur radio is in our diverisity and although I believe it is important to add new modes to amateur radio as they become available in the "real" radio world, I believe that it is important to consider their compatibility with existing useage and modes and add them in a way that minimizes the impact. But adding them is important because I believe that Amateur Radio will improve upon their implementation -- the technical part of the value of Amateur Radio to the world at large.

> That's an attitude attributable mostly to people who spend most of their
> time trying to change things whether or not they need changing instead
> of using HF ham radio.

I am sure that most of those who want change can give you more reasons that change for the sake of change. I have given my principle reasons above. And I am fairly active on HF CW, near the QRP frequencies.

>> I will speak only for myself, Dick; I have never suggested that you need to
>> dump anything that interests you.

> This little scrap has been ongoing far longer than I've been on usenet.
>I don't mean to attribute any particular part of it to you personally,
>just that you have shown that you agree with the thrust, that ham radio
>is derelict in having not widely adopted all those new modes which have
>done so well in commercial and government use.

Sure I have, but that does not mean that I am forcing you to dump what you are doing. I do not want to dump what I am doing; I am just making an observation.

> Overlooked is the widely diverging orientation between ham radio,
> especially HF, and those other services which have largely abandoned HF.

I tune off the ham bands, Dick, and I hear plenty of signals. Surely your antenna can't be that selective on receive. And that divergence is NOT overlooked; it is the reason that I believe what I do. I do not believe that it is healthy for Amateur Radio to be becoming more and more different than the "real" radio world. We never would have been created in the first place if we were so different, we would not have survived the times we have been taken off the air for various national emergencies if we were so different at the time and that difference will not help us to justify spectrum that is becoming more and more threatened. Those are my reasons, Dick, not change for the sake of change, not forcing other hams to my Agenda (whatever the heck that is supposed to mean).

> I believe the main reason for that is there is largely no need felt by
>most hams for ir, particularily on HF. And most of the spectral problems
>on VHF/UHF are because of outdated schemes and regulations instead of
>modal shortcomings.

On HF, I think the main thrust will be first in the area of digital voice. I think it important that some hams be experimenting about it, and I think it important (note important <> forced) that hams understand the principles on which it operates. When future rules changes may be put forth by the FCC about these modes, I think that the amateur community's comments should be correct and appropriate.

> That doesn't mean that there is no benefit at all to
>making wholesale changes, just that there is no demonstraded need.

I do not think that we need to make wholesale changes, Dick. I have said that I believe that it is important that amateurs know the fundamentals of these modern communications techniques. I think it important that some amateurs begin using these modes, and out of that use and experimentation, I think that balance and the appropriate changes to Amateur Radio will naturally evolve.

> The "installed base" principle DOES apply.

Yes, it does, a factor that was very much recognized by the FCC when they chose to retain the 70 cm and above limits on SS. I agree with that decision, although I would like to see some accomodation made for SS on HF, too. I think the subset of those that might experiment with SS on UHF and up may be different than those that would do so HF. The nature of SS implementation would be significantly different on HF than it would be on UHF.

As SS does become more used on UHF (and I sure hope it does), the advantages and disadvantages of the mode will become better understood by amateurs and, if it is as good as the proponents say it is, then hams will glom on to it pretty quickly. If not, it will die a natural death. Do you agree that to be appropriate? If it does have significant advantages, it may very well replace the VHF repeater schemes in use today, although I believe that some spectrum should be reserved for such operation (diversity is important).

> The political problems on VHF/UHF might be releived by changing to SS
>but look at the huge cost involved for the small benefit, and I really
>don't think most hams would benefit at all.

I am not sure the cost will all that huge, nro am I sure that the benefit will be all that small. I don't know, and I don't believe that you do either. I do know that if hams are to remain valuable to mainstream radio, they need to learn what mainstream radio is today, and SS and other digital techniques are very much a part of it.

> I see it as merely "change for the sake of change".

Yes, it is change, and we need to change, Dick. But I am proposing a change of adding knowledge to the base of Amateur Radio, adding diversity to Amateur Radio and under rules that exist right now, doing so in a way that doesn't force anyone to do anything. For the life of me, I can see why you think my views to be so onerous.

> With the serious decline in use of much of the
>present repeater system having occurred I doubt if much activty would
>survive.

Would there be more repeater useage if none of those who wanted to put up a repeater were told they can't? How much use would you make of HF if you were told that you would not be given the use of a frequency to do your thing, but would have to join in QSOs already in progress?

> Would I buy a completely new VHF rig to replace the FM rig that
>I rarely use now? I seriously doubt it, unless some new factor became
>involved.

No, you could continue not using your FM rig if you wish.

> Replacing all the FM gear now in use is a huge project that I
>just don't see happening at all, wsithout some more compelling reason
>than just updating the technology.

Perhaps the compelling reasons will be found if the FCC carries out whatever is promoting people like Hatfield to tell us that we need to modernize. Perhaps the compelling reason will be found on 2.4 GHz as the upper part of the band fills with spread-spectrum devices by the millions.

>> >We've listed dozens of other objects which are
>> >also obsolete, and are still in universal use today, but that makes no
>> >difference.

>> Yes, they are in universal use today. How many of them are a mandatory
>part of
>> testing for any priveleges, amateur or otherwise?

> How many match the unique attributes of radiotelegraphy?

I assume that if you listed them as justification for retaining the CW tests, they had some relative bearing on CW tests.

>> >It is clear that the entire movement to "modernize" is nothing more
>> >than another push to get rid of the code.

>>
>> Is that what you think that retired Dale Hatfield from the FCC was seeking
>>to do?

> Of course not.

Then what do you think Hatfield was trying to accomplish?

> On the other hand, I sure do believe that he has been greatly influenced by the
>stridency of people like Carl Stevenson. Don't you?

No, I do not. Carl may be expounding some of the factors that have influenced Hatfield and the FCC, though. If you think that Stevenson's views carried more weight with the FCC than does the fact that modernization of radio is taking place all around us, to alleviate a growing spectrum shortage, then you are, IMHO, quite incorrect.

> After we've been flatly told that "a few people can change the world and
> just did"? After FCC near-totally ignored the ARRL BOD in the restructuring
> decision and gave NCI almost everything they
>whined for and some they didn't?

To what extent that would have happened without NCI, I don't know, but I think that the FCC really did want to reassess whether it wanted to retain Morse code testing in the Amateur Radio Service in the light of the fact that Morse code use under its jurisdiction in all other radio services has virtually disappeared. Had the Amateur comments been overwhelmingly in support of what ARRL had proposed, its views would have carried more weight.

>> There's that "agenda" thing again. Do you really think that the only
>reason I
>> say that I believe more hams should learn the fundamentals of modern
>> communications technology is to "get rid of the code?"

> No, Ed, you're not nearly the main part of the problem. You're only a
>side feature of it, in that you have decided to agree to cave in to the
>shrillness that is total opposition to ANY Morse code operational test
>requirement.

Dick, have you ever known me to cave in to anything? I find it hard enough to walk away from a discussion here. Those who know me well know that I am as stubborn as they come.

I don't understand why you believet hat I am in total opposition to any Morse code operational test requirement. What gave you that idea? I have said a number of times (gosh, it is getting tiresome to have to repeat things so often) that I believe that amateur testing should contain 5 minutes of sent Morse text with a reasonable number of questions about its content, included as part of the overall score. That would test Morse code to the same extent that other modes are tested. It is difficult to have a discussion you when you imagine I said things then disagree with me for saying them.

> Evidently the entire ARRL heirachy has.

The ARRL heirarch has decided to accept the inevitability of the removal of the Morse code requirement at the international level. It has decided that it is not changing its position wrt US testing at this time. It is difficult to have a discussion with you when you imagine what the ARRL Board has decided and then criticize them for doing so.

> Three or four years ago, not long after I first landed on this NG I
>said something about "Where's the beef? Why isn't there any gear
>available to actually use if these glitzy new modes are so great? When
>are some of the strident advocates going to put their expertise where
>their mouths are?"

A very good question. The needed rules changes went into place a few years ago. I am disappointed that more progress has not been made.

> If they are in fact all that beneficial and applicable to ham radio why
>are there NO renditions available today on the market, even as kits?

There are thousands and thousands of spread spectrum devices that operate on the ham bands, Dick. Soon, there will be millions.

> I looked over the TAPR website you gave, and yes indeed, I believe it
>is proper to add a few questions on that material to the question pools.
>But the tests, instead of being reduced in scope and number of
>questions, would be better expanded when including new material,
>otherwise they actually are being reduced in scope of coverage.

I think that out of 1200 questions in the pool, it should be possible to cover the subject pretty well. Even if no questions about these topics were added to the pool, I am sure that some hams will learn the material on their own, for their own reasons.

For someone who claims not to be concerned with things, you certainly
contradict yourself in your responses. I really don't think you remember what
you write from one day to the next. I guess it figures that you wouldn't
remember me from when I posted several months ago, and at that time, posted my
callsign. (Remember the little exchange we had about your complaining about
Kim's "vulger" callsign, and then your using the "F" word in a posting?
Do a deja.com archive search, if you like)

So how many more contradictions can we expect to see from you?

>removed, there will, for sure, be far fewer people even bothering to
>learn and gain useful proficiency in Morse code.

I wonder when the 20-13-5 WPM test was in place, how many hams learned just
enough to pass the test and then abandoned the mode? It would seem that the
number of proficient operators would have declined in spite of the mandatory
high-speed testing.

>The Morse/CW mode continued to survive and flourish only due to
>the code testing requirement. In the absence of the requirement,
>the numbers of Morse/CW mode users will most likely shrink to a

>laziness problem as we Americans do.
>
>73 de Larry, K3LT

That's probably because the European/Asian/African operators want to get all of
those American 10-10 numbers that you find so despicable. That's *their*
incentive.

> Have you removed that archaic gasoline engine from your car yet?

No, but I don't have to feed my horse oats; I don't own a horse. :-)

Of course, I do heat 100% with wood, so I am not opposed to archaic. But I don't think that everyone should be forced to take a firewood splitting test before they are allowed to heat their homes with oil.

Watch those analogies, Dick; it is real easy to think up analogies that appear to apply to either side of this.

I agree, Dick. Larry was saying that if a CW signal goes up against an SSB signal, the CW signal will lose. I believe he is incorrect.

The 23 dB might be a bit optimistic, though, unless the CW receiver really is using minimum necessary bandwidth. Although in wider bandwidths, some CW ops have a decent "mental" filter that can gain back some of what a measurement would say isn't there.

>Yeah, Larry. Go ahead and "positively think" radiotelegraphy out of
>existance.

I hate to tell you this, Dick, but if the FCC removes the code test altogether at some point, "positive thinking" will be the main tool we have to promote CW use among newcomers. That is true even today; those who pass a test will not be inclined to try the mode if all they hear and read about CW is that it a difficult thing needed to be a test of character. It is hard to undo that damage once it is said.

Yes, I understand now. And those of us that slip by that filter are only saying what we are saying because some external factor is forcing us to do so. Thanks, now I can sleep at night knowing I am not lying to Larry.

>
There'a a lot of completely wifty mythology floating around about what
actually goes on in those " Lower 25 Extra DX Sanctuaries". 99% of the
comments I see posted in this village on the topic clearly demonstrate
that the commenters have no bloody clue, they've never operated there,
or they've never listened there, or they didn't pay attention if they
did listen, or they can't decode it, whatever but they know all about
it. Fact is that the lower 25s are NOT high speed cw countries nor are
they some fancied, "exclusive dx windows".
>
True, the dx tends to hang out below .025 but certainly not
exclusively. Many of my rarest catches have been well above .025. The
speeds used depend almost exclusively on the speed used by the dx
station and/or the prevailing band conditions. Yeah, you bet, you
don't work long path JAs on 80 at 40 wpm, more like 10-15 wpm if that
fast.
>
I'll be happy to qso Cecil at 5wpm on 7.002 or 14.002. When the qso is
over nobody will even notice let alone "get spanked" and absolutely
nothing will have been "proven" except that we participted in the Ham
Radio Non-Event of 2001. Bleh.

He simply rails against cw in general at any and every opportunity to
be heard and is well known in this region for being a real crackpot on
the subject. Dumping the sub-bands and implemting FHSS are very much
in line with his lust for burying cw operations.

Sicko crap snipped.

I don't get it, Hans. You're making a funny over handicapped people?
Maybe you're prepping for the Howard Sterno show. Just when we thought
the world was ready for more "Good Ops," we get Hans.

Apparently, "Know Code" doesn't mean squat anymore. Its being degraded
by the very people who prize it above all else. What are the rest of us
who consider it just another mode to think?

Thats a whole lottsa sending. Isn't there something shorter to send in
actual emergencies?

...someone sent me a message in private e-mail. Without revealing
their identity, I'll address a few points in public -

>Does a spelunker know more about caving than a non-spelunker?

Amateur radio is not about cave exploration but some amateurs
have been a dark cave too long...

>Does an attorney know more about law than a non-lawyer?

Amateur radio is NOT a profession. It is a radio activity engaged in NOT for pecuniary purposes. Lawyers often bill clients for as much as, well, the law allows...

>Does a pilot know more about flying an aircraft than a non-pilot?

Although pilots are licensed by a federal agency, there is NO resemblance between the tests and skills required for piloting as compared to even the highest "upgrade" in US amateur radio.

>Does a fisherman know more about fishing than someone who has never
>baited a hook?

Actually, yes, fly fishing comes to mind. :-)

>You are absurd.

No more absurd than the US civil radio regulation agency NOT requiring its Commissioners or staff to hold amateur radio licenses.

No more absurd than the thought that an amateur radio license grant entitles them to be expert (or even knowledgeable) about gun control, politics, voting procedures, or everyone's morals and ethics. All of those subjects have been "argued" in this newsgroup. Absurd indeed!

The fallacy in the unamed correspondent's reasoning is that radio is NOT exclusive to amateur radio and amateur radio activities are NOT secret, nor are they at any higher plane of radio arts than other radio services.

>> Seems to me that such an attitude turns people away...unless
>> they like living under self-professed, self-appointed non-comms
>> with a superior control-freak compulsion.

>You mean the kind of attitude which provides free instruction on the
>"how to's" of amateur radio and assists someone who knows nothing about
>amateur radio in obtaining a license?

While it is considered thoughtful to "elmer" a newcomer, the chances that such newcomers "know nothing about radio" is very slim indeed. A case can be made for newcomers knowing nothing about amateur radio but such introduction can be done with any one of several books or an Internet session accessing the ARRL website.

What turns away newcomers is the patronizing arrogance that They and only They "know what is best for all amateurs" and that all newcomers should follow their example and experiences.

>Follow orders? Our way or die? You are absurd.

Not me absurd. What is absurd is the continuing rationalization of the already-licensed to "do it as they did it" without question for that is the "correct way."

What is more absurd is the maximally-upgraded radio amateur trying to say that testing should be as they were tested...even though they will never have to take a single amateur radio test in their entire life. Such is an extreme case of "doing it as they did it" for no other reason than they feel they "control" amateur radio through license tenure.

>What the hell are you ranting about, Len? Is it your opinion that
>licensed radio amateurs should sit here and read material written by a
>non-amateur which attempts to tell those who have been radio amateurs
>for decades how it is and how it should be?

In a sense, yes, for several reasons. A clarification: I do not presume to dictate communications practices as they are done on the air except for the gray area of bandplans that separate classes of licenses.

Another clarification: The FCC tells ALL radio amateurs what regulations are, permissible bands and modes, and some of what is permissible communications in addition to granting licenses. ALL of that yet not a single FCC employee is required to hold an amateur radio license.

I am referring to REGULATIONS set by the FCC in regard to amateur radio LICENSE TESTS. Those amateurs who took tests "decades ago" did not take tests under regulations of today or the near future. Newcomers will.

As far back as a decade ago, the FCC said that it did not consider a morse code test as a true requirement to show them that an examinee was worthy of an amateur radio license grant. They said essentially the same thing in 1999. The FCC is required to keep a morse code test due to an ITU-R standard, a political situation, not one for licensing.

>You speak of egos. What
>kind of enormous ego demands the respect which you seem to feel is due
>you by us based on your past military service and your experience as an
>engineer?

Not a big ego here, certainly, but it is obvious I've punctured the self-centered, self-professed amateur "experts" who expect all kinds of respect based solely on license tenure...without any evidence of having learned anything new since test time.

US amateur radio is NOT a military service branch. There is no true rank, yet the "upgraded" assume more "rank" than "lesser ranks and are not hesitant to say so. That is not respect for a fellow radio amateur.

US amateur radio is NOT defined as some living museum of antique radio standards, modes, procedures, or anything else yet the "ranking" members seek to keep the old, resist change, yet prattle on about "advancing the state of the art" and "saving lives through amateur radio morse code ability" as if there were another Titanic awaiting rescue. This is the year 2001, not the year 1912. Amateur radio is a hobby, not a living museum or a public safety radio service defined in Part 90, Title 47 CFR.

Radio spectrum is regulated for ALL citizens, not just radio amateurs. Radio amateurs think nothing of voicing their opinions on other radio services and certainly on other subjects having little or nothing to do with radio. Why should amateur radio be "immune" to comment from those who do not hold amateur licenses? Why should amateur radio be sacrosanct from criticsm of any kind?

I have my uls number, and I am blind, and can't get this program to work on the fcc's web site. They have that damn java script, and don't know what that is, but wish they would just put it in plain text. Guess that damn stuff is a sighted thing, don't know, but if someone could help, e-mail back. Thanks from n4pge in griffin, ga.

Yes,

But do they still require 13 and 20 WPM for advanced and extra?
Hopefully, they will do away the code requirement all together at the next
ITU meeting.
Code should be an elective mode.

But DSP removes the need for a lot of specialized SSB hardware.
The hardware is completely generalized. The software is specialized
and can be loaded depending on the mode selected.

Why isn't that pre-April-15 analysis nit-picked in another huge
posting? :-)

>> The total number of code-tested US ARS licensees is decreasing.
>> The number of non-code-tested US ARS licensees is increasing.
>> It has been that way for over three years..
>
>Nobody questions that. The probelm is that you unnecessarily misstate
>both the increase in "non-code-tested" and the decrease in "code-
>tested" by a very significant percentage.

Not a significant percentage compared to the ARS licensees as
a whole or by license class.

The whole point of the first post in this thread was attempting to
point out that the number of code-tested licensees are
decreasing while the number of non-code-tested licensees are
increasing.

You agreed to that but went on at great lengths, very great
lengths to do practically a word-by-word critique in order to
show I was "wrong." That seems to be a great hobby with
the code-tested licensees since others have fun the same
way trying to prove all no-code-test advocates "wrong."

Denial is the psychological syndrome of your activity.

<snip>

>> >End result is that your numbers are way off.
>>
>> No.

See?   :-)

>> I am not ASSUMING anything about "renewals" or expirations
>> or anything else,
>
>Yes, you are. You are assuming that ALL Technicians are "noncodetested"
>even though it is clear that thousands of them ARE "codetested".

Now how can I be both "wrong" and "right" at the same time?
:-)

>> >The number of new Technician licenses proves one thing: Most people
>> >starting out in ham radio do so by getting a Technician license.
>>
>> How do you KNOW that?
>
>Simple: Most new licenses are granted to new hams. Most new licenses
>are Techncian licenses.

But not ALL of them. :-)   Please count the Novices, Generals,
Advanced, and Extras prior to April 15th. [I did that for you but
it's best you do it yourself...try the raw FCC database to avoid
any possibility of error]

>Sure. Just look at the "new licenses" page on the AH0A site. It's right
>there.

I did that. I said that. You did not acknowledge that.   :-)

>Sure - plenty of them. See the above page. But the most new licenses
>are Technicians. Nobody disputes that.

Yet you make such a fuss over numbers after April 15th...and
concede that numbers are okay prior to April 15th?

>It's not the future that is in question. It's how many upgrades have
>occurred in a given time period. The Speroni site doesn't say.

You can calculate that yourself. The raw data is available
to everyone with Internet access to the FCC website.

>Then you ARE predicting the future when you make statements like the
>one above.

There's a difference. As an example, a Bode plot may show a breakpoint where frequency response begins changing. One can consider the new slope of the Bode plot to continue on with the new slope. One can liken the plot to a "trend." On the other hand predicting some percentage renewal is akin to saying that there will be another breakpoint with a different slope on the Bode plot...except we cannot see it yet. The we-can't-see-it-yet is the "renewal."

>Unless the conditions change in that time period. Like the fact that
>the first post-Feb-14-1991 Technician licenses will start to expire
>very soon.

It is fair to say that you will probably enjoy that. :-)

And the more the merrier for the code-test advocates. :-)

>All I'm doing is pointing out some easily-avoided errors in your
>methods.

All I did in reply to your "error" statement was try to establish the basis for the original thread posting. Since you apparently don't like no-code-test advocates of most kinds, that became an ISSUE of great magnitude to point out "errors" as you did. In effect you changed conditions to suit whatever agenda that you had (presumably to show code-tested licensees in a better light), concentrated on the period following April 15, 2000, and condescendingly "conceded" the trends shown in the years prior to April 15, 2000.

Despite the strong efforts at denial, the unfortunate fact is that the number of US ARS code-tested licensees are decreasing and the number of US ARS non-code-tested licensees are increasing. It is "unfortunate" for those who strongly favor morse code testing. It is expected by those who do not favor code testing.

>I have no idea what you are talking about, Len. I'm just pointing out
>some easily-avoided errors in your methods.

...and I pointed out the ERRORS in your own "analysis." The fact of Who is What has been lost in the fury of trying to show error-error-error. :-)

>No, it's more accurate because the method takes into account relevant
>data that your method ignores. The errors introduced by your methods
>and assumptions are significant.

The use of "significant" is subjective, not a good analytical tool to show absolutes. You are committed to showing absolutes

by as much detail as possible in order to show code-tested
licensees as "better."

>No, they were reasonable estimates.

:-)   :-)   :-)

>> No sh*t?
>
>Why the vulgarity, Len?

Is the word "shot" vulgar?!? Oh, my, that will not sit well with
anti-gun-control advocates!

Jim, "code" is a four-letter word.   :-)

>> No sh*t?
>
>No reason for that, Len.

Ok, ok, shooting is noisy. I'm sorry your ears hurt. Apologies.

>I have no idea what that is supposed to mean. What is a "job
>technician"?

Electronics industry description of a technician, most often
called "electronics technician." As opposed to the amateur
radio license category of Technician class.

>> and "many" of the existing Techs will drop out,
>
>That's not what I wrote. 5% per year is not "many" - it's one in 20.

Ok, if it's okay for you to change original conditions then it
should be okay for me to change original conditions on you. :-)

How many of the General-through-Extra license classes will
drop out. None? Some?   Define "some." How about 5%?

5% isn't many or some, it's just one in 20.   :-)

>Never claimed that at all. What IS your problem with Morse code, Len?

My problem and that of many others is that a test for it is in
the regulations for any license having below-30-MHz privileges.

>The whole code-test thing is a dead issue. FCC reduced the code test
>for a US ham license to the absolute bare minimum under the treaty back
>in April.

ITU-R standard S25.5 does NOT specify any morse code rate at all.

The code-test issue is NOT dead...but a denial syndrome is evident
by you saying "it is a dead issue."

> Their comments, and their actions for the past 20+ years make
>it clear that the treaty is the only reason they kept 5 wpm testing.

Error, error, error? The 1990 Report and Order creating the Technician
class stated that the FCC did not consider a morse code test to be
relevant to their determining an amateur license grant. The FCC said
almost the exact same thing in the 1999 Report and Order concerning
US amateur radio restructuring. That is 11 and 2 years, respectively,
not "past 20+ years."

>Unless FCC decides to ignore the treaty, no more reduction will occur
>until the treaty changes.

Incorrect. The WRC working groups in the ITU-R may decide to delete
or amend S25.5 in the very near future.

"The Treaty" refers to the US adminstration's acceptance of membership
in the ITU. Standards defining amateur radio are the relevant items
which may or may not have a basis for the FCC changing amateur radio
regulations. There is no separate "treaty" with the ITU-R in regards to
amateur radio.

Meanwhile, newcomers are tending towards US amateur radio licenses
not requiring code tests and the numbers of US code-tested amateur
radio licenses are decreasing. You DO have a problem accepting that.

You are quite correct that most new hams enter ham radio under the NCT license. You were incorrect in assuming that all Techs in the database have not passed a code test.

>setting is a joke.

Hundreds would very much be the exception. 30 or so is more typical. Once, I think it was in Hunstville, I gave a talk on Product Review testing. The size of the audience doubled halfway through when the second ham walked in. :-)

The electronics industry in general simply replaces board
assemblies because it is cheaper to do so in the long run.

Faulty boards are often processed to recover gold and other
precious metals.  There exist several companies that make a
profit on doing so...addresses in many industry Buyer's Guides.

>I own an old Ten Tec OMNI D, built in the early 80s.  Do you think most hams
>of that day would have fixed it themselves, or sent it to the factory?

Is that the Ten Tec that floats?  tRoll said he was once
marooned on an island and was rescued via CW when
one floated ashore.  :-)

Do they have a printed, official document with a listing of THE
radio officer for some "4th Infantry Brigade?" [maybe with
embossed edges, sort of like a frame, perhaps with an eagle
rampant on a field of J-38s?] I think that would be very nice.

I've never met actress-comedienne Ruth Buzzy. What has that to
do with a humorous reposting of old material by Hans Brakob
on what an engineer is?

It must be that overconcern with code skills and keeping standards
and practices of the USAMCC dulls the sense of humor. :-)

Nope. Just pointing out Urban Myths, falsehoods, folk sayings,
etc., etc.

Are you saying the FCC is NOT the only US agency that licenses
US radio amateurs?

Are you saying that FCC databases are NOT public?

>> You've done nothing of the kind, only shot off your keyboard again.
>

I'm sure you have extra-wide margins on everything. :-)

>   Which in only ONE month exceeds your total for the DECADE.

Amazing! Well, don't just stand there, go out and hump up someone
to nominate you for the Nobel Prize. [they DO have a ham radio
category, don't they? if not, I'm sure you will want to go whip them
into shape, put them through close-order drill, make MEN out of
the Committee.   :-)]

>   Adios, Chump. Get a life.

Thank you, I have one. No worries about second jobs, money,
living away from home, or damaged ego in newsgroups.

Now, let's return to the original thread start. Newcomers to US
amateur radio are mostly NOT choosing to go through the hoops
of seeking a code-tested amateur license. Why is that?

For damn certain, they aren't choosing to join some United States
Amateur Marine Code Corps, to march in ranks under the
militant "leadership" of abusive Dill Sergeants who religiously
follow the Proper Code (of conduct).

You and the obersturmbandsfuhrer keep saying that No One Can
Possibly Know Anything About Amateur Radio Until They
Become Properly Licensed. If that is so, why should there be
any interest in becoming a US radio amateur through a test?

Seems to me that such an attitude turns people away...unless
they like living under self-professed, self-appointed non-comms
with a superior control-freak compulsion.

It is doubtful that many will want to Follow Orders from those
Who Know Better Than Everyone Else. You and the obersturm-
bandsfuhrer act that way. It is Your Way or Die. No quarter.

US amateur radio must be a real tough military Service
according to you!   :-)

Heh heh heh...I don't have a singular crystal ball, Steebie.

Interesting reaction due to Fury and Rage!   :-)

>   Lenni, almost every post you make is intended to insult or troll.
>The first post of this thread is pure proof of that. It had absolutely
>NOTHING to do with the implementation of ANY policy. Just your
>attempts to further incite discontent.

No doubt the Service Members of the United States Amateur
Marine Code Corps think so.

Policy: What the FCC instituted in 1990 (Technician class
amateur license, no code test) has proved to be quite popular
and continues to be the fastest-growing license class. That's
according to public data from the FCC. In only a decade it is
responsible for attracting roughly a quarter million licensees.

It's obvious that some do not wish to hear of that, especially the
stalwart, superior Dill Sergeants of the USAMCC.   :-)

>   Hmmmm....call me "Steebie" (pablum caught in your dentures again?)
>and THEN attempt to cahstise ME for "insult(s), belittlement,
>denigration, etc, etc"...?!?!?

Oh, my, I was guilty of thinking that replies in kind were okay,
especially after having been addressed as such for over a year.

Is everyone to call you "Sir" because of your rank, status, and general superiority in the USAMCC?

>> All I did was post a comparison between the code-tested licensees
>> and the non-code-tested licensees in the US ARS.
>
>   No what you did was troll. You succeeded.

All I did was post a comparison between the code-tested licensees and non-code-tested licensees in the US ARS. Another Extra class argued on the numbers presented and we have had a debate and argument over what should have been presented. You have neither argued nor debated those numbers or what should have been presented.

>   You ATTEMPT to ask one of those "Do you LIKE having sex with your
>sister" questions.

I've never asked you about having sex with your sister. I don't know if you have a sister. :-)

> Of course they are "real hams". The "arguement" is
>NOT are they real hams, but are YOUR numbers valid. THAT answer is NO.

"NO" based on what? Public data from the FCC? Are you calling the FCC Liars?!?

>> See, there you go again, being uncivil, rude, insulting...sort of an
>> extra grade asshole.
>
>   And now the resulting profanity.

Heh heh heh...ex-marines complaining of profanity!   :-)   :-)   :-)

>   And WE (yes, WE) DON'T CARE! NONE of that makes a didly squat
>difference because THIS NG is about HAM radio...NOT "Ex Engineers With
>A Chip On Thier Shoulders".

Now, now, calm down. You said I was a "technician" in industry and I replied that I was an engineer. I was and still am.

I've not had a Chip on my shoulders but I once got a pair of cuff links for my father made from old thin-film hybrid circuits. Unique...only jewelry that came with a schematic!

This newsgroup is, similarly, not about nursing, health care, or industrial purchasing agents (who use company computers on company time to Internet).   :-)

> Probably for the same reason YOU keep lying, using profanity and
>generally being an annoying little twerp. Because I CAN.

You civility and genteel nature has not been noted here for a long
time. :-)

I am posting this message for discussion.....

FROM : Carl R. Stevenson - WA6VSE
Executive Director, No Code International

TO:

SUBJECT: Industry Canada Proposal to Lower Code Speed to 5 wpm;
NCI Needs to Establish a National Chapter in Canada to Support
Adoption of this Proposal - YOUR Help is Needed!

DATE: Saturday, February 10, 2001

Dear ?,

As you may be aware, Industry Canada recently issued a proposal aimed at lowering the Morse code test speed for "full privilege" licenses in Canada to 5 wpm. Complete information on this proposal may be obtained by following the link in the following article copied from the NCI website.
Canada Issues Public Notice Proposing Rules Change to Replace 12 wpm Morse test with 5 wpm test!!!
For more information, click on the following link to a copy of the Notice with some live links to an e-mail address where comments may be sent and to an Industry Canada website where comments may reportedly be viewed.
At a bare minimum, we need all of our Canadian members to file comments with Industry Canada in support of this proposal. Comments are due 60 days from the Publication Date, which was 2001-01-06.

However, the Board of Directors of NCI also feels that it is very important that we establish a National Chapter of NCI in Canada to represent our Canadian members' interests. In order to establish a National Chapter of NCI in Canada, we need a National Chapter Chairperson.

Therefore, we are seeking suitably qualified volunteers for the position, who are presentable, articulate, able to deal with regulators and those with opposing views in a diplomatic fashion, and passionate about NCI's goal of ultimately eliminating ALL Morse proficiency testing as a prerequisite for all classes of amateur license. Familiarity with Canadian regulatory practices and officials, good writing skills, and either being located near or having the ability to travel occasionally to Industry Canada's main offices to lobby for the cause, would be also be highly desirable attributes.

Please take a few moments to review the material (including the Bylaws provisions relating to National Chapters) at: http://www.nocode.org/National_Chapt_Notice.html If you are interested in being considered as a candidate for NCI's Canadian National Chapter Chairperson, please e-mail a brief letter stating your interest, why you think you would be a good representative for NCI in Canada, and a brief "resume" of your amateur radio background and interests to me at: wa6vse@fast.net for consideration by the Board of Directors.

We NEED to fill this position . please don't assume "Someone else will do it." . if you're interested and feel you could contribute in this role, PLEASE take the initiative and indicate your willingness to help!

73,
Carl R. Stevenson - WA6VSE
Executive Director, No Code International

I didn' think that there was anything such thing as a "CW sub-band". I thought
that CW was permitted on all amateur bands.

Larry would find something else to whine about. I think it's his favorite hobby next to beeping.

Well said.

By the way, who is "Ken"? and if freebanders are so mature, why are
they ignoring the FCC, breaking the law, and putting all of our
frequencies in jeopardy, ham, CB, and freebander? Doesn't sound all
that mature to me.

I have had nothing but good experiences with HQ staff people,
starting with Dick Baldwin and going up to the present time,
both in my too-few visits to HQ and when I met them "in the
field".

They may not have always agreed with me (ask Steve Mansfield
about our heated differences on the Feingold Bill) but we never
failed to show mutual respect for each other.

Jon, now let's be fair to Larry. He does have some favorite people.
For instance, he once posted that his favorite Black on the bus was the
driver. Because he was the only one with a job.

Then you are in complete disagreement with some of your other ground
wavers, except in one respect: you are all arrogant.  Good Ops or not,
you're rather shitty to other hams on here.

Jim Kelley thinks I have nothing to say, you say I speak "volumes."  Why
don't you two huddle, then get back to me.  I'm almost curious which way
you'll decide.

Makes me wonder what they are actually doing during the 10-10 CW
```

contest. ;)

My comment was directed toward the single-mindedness of collecting
10x numbers, and the inability to ragchew by a few of the herd. Not
anything pro or con about modes.

In article <962bmo$1ggc$1@heap.juniper.net>, dennis@wawa.juniper.net (Dennis Ferguson) writes:

>Tentec also sells both an HF and a VHF transceiver that work this way.

I don't know about the VHF models, but the HF/MF ones are the Pegasus and Jupiter. They are actually the same basic unit - the Jupiter has a "front panel" with controls and the Pegasus needs a PC to control it. (The Pegasus has been called the "poor man's Kachina" by some).

But the receiver dynamic range (blocking and IMD) on them are not very good. The old Ten Tec Corsair 2, designed in the mid '80s, has much better performance in that area. The Elecraft K2 blows it away on those specs.

It's a matter of bells and whistles vs. genuine receiver performance. DSP filtering at the tail end of a receiver isn't going to fix overloading and intermod ahead of it. This is not new stuff - By Goodman wrote about it in 1957 ("What's Wrong With Our Present Receivers?")
>
>For transmitters it is in principle possible to avoid mixing stages
>altogether, instead generating the modulated RF directly using a
>DDS chip as the DSP's output device. Unfortunately, I discovered that
>the outputs of current DDS chips can have more spurs than a Texas saloon,
>so this may need to wait for another generation of the technology.

That basically says it all. DDS spurs will also cause all sorts of receiver spurious responses, too.

>> think AM was anywhere near gone by 1962.
>
>It was not. Even by 1968, AM was far from dead in the Amateur Radio
>Service.

All true - but that's not the point.

When AM was the predominant voice mode on the HF/MF ham bands, an SWL could tune across almost any of the 'phone parts of those bands and find ham QSOs that were easy to tune in and easy to understand. Many hams of the that era tell of discovering ham radio by accidentally coming across hams using AM.

When SSB took over the prime spot, and AM became less common, the chances of that sort of thing happening decreased markedly. And to find the remaining AM hams, an SWL had to crawl through lots of SSB signals. End result: What was once a good source of new hams was greatly reduced.
>
>> Further, most of the SW receivers of the day had a BFO (even the cheapie
>$29.95 Heathkit AR-3)
>> which made SSB copy possible.

The AR-3 had a "reflex" BFO - the first audio stage was made to oscillate. The results were far from optimum.

I had the predecessor AR-2 receiver, which had a separate BFO. It was not a very good SSB receiver.

A WW2 surplus "Command set" receiver was much better. But SWLs rarely used those.

> I think that any SWL worth his salt could still listen to hams...

Sure - but there were not as many that were EASY to listen to. That's the point. It must be remembered that the unskilled SWL probably didn't know to turn on the BFO, turn down the RF gain, turn up the AF gain and tune very slowly. And most of the inexpensive receivers of that time would win the Zelda Fitzgerald award for stability.
>
>My SWLing was with an old Zenith Transoceanic receiver. I don't recall it
>having a BFO.

Those things are prized items today. 1L6s are even more prized.

>
I never touched the dern things. Went straight to ham radio.

>> >TV watching increased all through the '50s and '60s.
>
>> How does that explain the sudden stop in '62?

All of those factors were slowly increasing their effects on ham radio growth.
>
>And TV watching increased through the 70s and 80s, too, a time of steady

>growth in amateur radio.

But the novelty was gone. When TV was new, it was a big deal, but the viewing was limited by the limited number of stations and the limited time they were on the air. TV was expensive and many areas did not have good TV coverage. By the early '60s, the prices had dropped, stations were everywhere and "almost 24/7" telecasting was starting to show up. (I remember when seeing a "test pattern" on TV was common, and listening to the national anthem as the station signed off after the 11 pm news. That's all gone).

Point is that a new thing like TV eats up people's spare time, money and interest for awhile. Then, as it becomes commonplace, it fades into the fabric of life.

PCs and the Internet are doing the same thing. Eventually home computers and internet connections will be as common as TV, if not more so.

Then why have YOU been posting my license numbers, Lennie? I sure didn't.

Again, "rules" only apply to others...NOT to Lennie.

It's Chattanooga. No, I am afraid that Chattanooga doesn't yet have the concentration of electronics inductry that Atlanta does. I am sure, however, when many of them tire of the bumper-to-bumper traffic and being afraid to go anywhere without armed escort, Chattanooga will catch the overflow.

> Purchasing agents must be making bundles of money now!

I wouldn't call it bundles, but ANTEC's stock falterings are not a complete view of it's performance.

Again, like your "views" of Ham Radio, you look from the outside in and make poorly substantiated judgements on that. Oh well. Nothing we haven't become accustomed to.

>Not a callsign you can use for bragging rights but you can,
>literally, take it to the bank.

I already DO have "bragging rights", Lennie. In more than one field of endeavour.

G'night, Lennie. Mrs A has your dose of Geritol ready.

I said that I think that most hams of the *50's* could fix their own
gear. Things had somewhat changed by the 80's. I've never seen the
inside of an Omni D, but if it is non-digital and has discrete
components, I think that I could probably fix about anything that
would go wrong with it. Am I the average ham...

Agree completely.

>>Riley Hollingsworth has been telling hams that we should not let Amateur
>>Radio become obsolete under our watch.
>
>Unfortunately Riley has been trying to get us to stop fighting amongst
>ourselves and to stop profaning the airwaves. Technical stuff seems to
>be a secondary problem for him these days..

Has anyone, other than some hams, made any complaint
regarding the technical ability of hams today?  That is
clearly a non-issue for the FCC and other non-ham folks.
In contrast, the garbage that some hams spout on the
air can be heard by anyone.  I applaud Riley's
efforts because there's certainly nothing that Riley
would be involved in regarding the techhnical issues.

Cheers,
Bill K2UNK

I agree Ed and that is more the function of the greater
amount of information/knowledge it takes to have
that fundamental grasp today vs the old CW and AM
only days.

Squiggy doesn't have a fist, he couldn't communicate with dots &
dashes if his life or anybody else's life depended on that ability, he
advocates elimination of all subands, he advocates the use or wideband
digital modes on the HF ham bands and he goes off on anti-cw rants at
neighborhood ham club meetings (draws snores and doesn't go back). The
only time I'd do dinner with him would be if he was the guest of honor
and showed up on the platter with an apple stuffed in his mouth.

It's easy to figure them out, though.

The AH0A site lists renewals by class. Looking at those results, we see Tech Plus renewals at the rate of several hundred per month, and Tech renewals at the rate of 1 or two per month until April, 2000. Then, in April 2000, the number of Tech and Tech plus renewals is almost equal (339 Tech Plus vs. 332 Tech). In May 200, the trend reverses - Tech renewals suddenly jump to several hundred per month, and Tech plus drop to a few per month.

It's clear what happened: On April 15, the FCC started renewing Tech Pluses as Techs.

Last time I looked, the FCC would not renew a ham license unless it was within 90 days of expiring. Since the Tech lost its code test on Feb 14, 2001, no Technicians were eligible for renewal until Nov 16, 2000 (90 days before Feb 14, 2001).

So ALL renewals of Tech or Tech Plus from April to October 2000 are Tech Plus renewals. The renewals of November and December 2000 are a mixture of Tech and Tech Plus renewals.

The total number of Tech Plus to Tech renewals from mid April 2000 to October 2000 is 3303. That number represents a lower bound on the number of Tech Pluses that the FCC renewed as Techs during the time you cited. The actual number is higher because of additional Tech Plus to Tech renewals in November and December of 2000.
>
> I did as stated, taking the overall monthly numbers of licensees in
> each class, separating code-tested from non-code-tested..

No, you did not. You equated "Technician license" with "non-code-tested licensee". The two are NOT equivalent, as has been demonstrated.

There are at least 3303 Technicians who are code tested because they are renewals from Tech Plus, as the above analysis proves. The actual number is much higher because November and December of 2000 are left out of the total. In addition, there are an unknown number of Technicians who have passed the code test but who had not upgraded during the cited time period because they hadn't passed the written yet.

End result is that you miscategorized several thousand code-tested licensees as non-code-tested, even though the data to properly categorize them was readily available from the same source.
>
> I could have gone into an extensive "analysis" by including
> numbers of Expirations of licenses (also tabulated) and doing
> all sorts of second-guessing on the "why" of such. I did not.

No, that wasn't necessary at all. The information needed is on the renewals page.

And we haven't even mentioned vanity call renewals, which are shown separately.
>
> The FCC renewal shift of Tech-Plus to Tech would put such
> Tech-Plus licensees in the CODE-TESTED group, would it
> not?

Nope. See above. FCC expects Tech Pluses who renew to keep some sort of record that they are code-tested on their own. An old license is adequate.

> The old Technician-Plus class required a code test for a
> license.

True.

> In order to separate code-tested from non-code-tested,
> I made an additional posting regarding the 27 months between
> the start of 1998 and the end of March 2000.

Which has no effect on the errors in your analysis of the period following the restructuring.

> That additional
> listing excluded any "renewal" shifts from Tech-Plus to Tech.

There were no such shifts before April 15, 2000.

> The results are still the same -
>
> The total number of code-tested US ARS licensees is decreasing.
> The number of non-code-tested US ARS licensees is increasing.
> It has been that way for over three years..

Nobody questions that. The probelm is that you unnecessarily misstate both the increase in "non-code-tested" and the decrease in "code-tested" by a very significant percentage.
>
>   <snip>
>
> >End result is that your numbers are way off.
>

> No.

Yes, they are way off.

> I am not ASSUMING anything about "renewals" or expirations
> or anything else,

Yes, you are. You are assuming that ALL Technicians are "noncodetested"
even though it is clear that thousands of them ARE "codetested".

> just showing the totals of code-tested versus
> non-code-tested over the last two-plus years plus the number of
> NEW licensees, code-tested versus non-code-tested.

The original numbers posted were derived from the totals, not from new
licenses.
>
> If you start assuming some condition, your "analysis" changes
> to mere SPECULATION.

Not at all. Every analysis assumes some conditions. You assume that the
Speroni data is correct, even though AH0A himself says it contains
anomalies. You assume that "Technician" always equals "noncodetested"
even though plenty of proof exists to the contrary in thousands of
cases.

> That is no longer any valid analysis.

Estimating is a valid analysis tool.
>
> >How do you know? What is faulty in my estimate? I clearly
> >said "SUPPOSE" - that makes it hypothetical.
>
> Speculation is still speculation. Such is not analysis.

It's an estimate, not a speculation.

> >
> If you are really picky about smoothing methods, feel free to
> pick out any period you want...but quit trying to say "everything
> is faulty." :-)

I'm not saying everything is faulty. Just some of your methods.
>
> >The number of new Technician licenses proves one thing: Most people
> >starting out in ham radio do so by getting a Technician license.
>
> How do you KNOW that?

Simple: Most new licenses are granted to new hams. Most new licenses
are Techncian licenses.

> All I see is the number of licenses granted

> for particular classes.

Sure. Just look at the "new licenses" page on the AH0A site. It's right
there.

> Aren't there any "Extra-out-of-the-box"
> licensees? Aren't there any "General-out-of-the-box" licensees?

Sure - plenty of them. See the above page. But the most new licenses
are Technicians. Nobody disputes that.
>
> >The
> >data does not tell how many of those new licensees later upgrade,
> >because upgrades are lumped into "modifications".
>
> None of the publicly-available FCC databases predicts the future.

It's not the future that is in question. It's how many upgrades have
occurred in a given time period. The Speroni site doesn't say.
>
> Can you predict the future? I can't.

I can make reasonable predictions based on past information and
experience.

>I don't have crystal balls.

I have no idea what that is supposed to mean.

> Sure, trends are ESTIMATEs. :-)

Then you ARE predicting the future when you make statements like the
one above.

> One plots past data and gets a
> "curve" which may be a sort-of-straight line or something that is
> curved. That estimate may be continued into the NEAR future for
> a few months with some element of certainty.

Unless the conditions change in that time period. Like the fact that
the first post-Feb-14-1991 Technician licenses will start to expire
very soon.
>
> It is better than picking fly droppings out of pepper to get the
> number of Tech-Plusses renewed as Techs,

I have no idea what that is supposed to mean. The numbers are right on the Speroni site. You ignored them - I didn't.

> the number of
> Advanceds that were dropped to a lower grade for any reason,

I know of no loss of amateur license grade as part of FCC rules for the past 50 years except for the renewals of Tech Pluses as Techs since April 15, 2001. Do you have any such information?

> or any number of "modifications."

Those are on the Speroni site, too.

> You can go to great lengths
> to attempt "proving" something in the multi-tiered US amateur
> licensing system.

All I'm doing is pointing out some easily-avoided errors in your methods.

> The only way you can REALLY "prove" your
> numbers is to download the FCC databases yourself and make
> your own search program to find EXACTLY what you are looking
> for to show those #$%&!!! no-coders they are "all wrong."   :-)

> Ah, "highly eductated!"

Yep. Always looking to learn more, though.

> Presumably there is some certificate or
> diploma attesting to such ability?

Yep - got a couple of them.

> I'd still call it a plain GUESS and lump it under speculation.

Why? I have shown the exact methodology and used the same source. 3303 is a clear, absolute lower bound on the number of "codetested" Techncians.
>
> >By ignoring the fact that no Technician licenses have expired yet,
your

> >yours because it includes relevant corrections. My method is simply
> >more accurate.
>

> It is "more accurate" from the pro-coder's viewpoint.

No. It's more accurate, period.

> It is "more accurate" because you said so.   :-)

No, it's more accurate because the method takes into account relevant
data that your method ignores. The errors introduced by your methods
and assumptions are significant.
>
> >It was identified as a "suppose". You ignored the whole expiration
> >thing completely. My analysis is more correct because the relevant
> >factors are included, and estimates identified as such.
>
> It is "more accurate" from the pro-coder's viewpoint.

No, it's more accurate, period.

> It is "more accurate" because you said so.   :-)

No, it's more accurate because the method is better.
>
> >You have no idea how many will expire and how many will renew,
either.
>
> Absolutely true...and I NEVER PRESUMED TO KNOW THE
> FUTURE. All I stated was a Trend based on PAST data.

Stating a trend IS predicting the future, Len, because you assume the
trend will continue.
>
> >My estimates are accurate within the limits stated. My analysis is
more
> >accurate than yours. Much more accurate.
>
> >The trend is that most new hams start out with Technician licenses.

not
> >correct or accurate.
>
> The US Technician class amateur radio license test did NOT
> include a morse code test element...ergo, the Technician class
> license can be considered "non-code-tested." That is what I said.

No. You said "non-code-tested" LICENSEES. Not the same thing as
LICENSES. If it was one time, I'd mark it up to a typo, but it was
repeated.

And the current Technician DOES provide for code testing. A ham who
gets a Tech and then passes the code test has Novice/Tech Plus HF
privileges.
>

> >I'm not denying any trends. I'm just stating the facts and pointing
out
> >your errors. Which of my facts is not true?
>
> Some of your "facts" were simply SPECULATIONS.

No, they were reasonable estimates.

> One even
> had the imprimateur of "highly educated."

It's an accurate description.

> Speculations aren't
> true or untrue, but they sure as hell aren't "facts."

They are estimates, not speculations. And only a few of my facts are
estimates.
>
> >10 months of data are available, so why not include them? The longer

No reason for that, Len.

> In the period before restructuring too place, was there an
> increase in the code-tested license numbers and a decrease in the
> non-code-tested license numbers ???

Who said that? Not me. All I wrote is the FACT that the whole situation
changed with the restructuring.
>
> >Which tells us that most new hams start out with the Technician

There is a difference between a database error and a change in license
class that is part of the regs.

> As I have suggested before, go download
> your own database files and do searching for whatever data you
> want to "prove" something. They are ASCII files and searchable
> with a text-based search program.

I'm not trying to "prove" anything, Len. Just pointing out some
avoidable errors in your posts. Is that wrong?
>
> >And the restructuring DID have an effect. Once the NPRM was
announced,

And your point is?

> Yes, Jim, "MOST" new hams probably DO start out
> as Technician class licensees (they aren't all job technicians,
> some may be engineers, housewives, plumbers, etc.).   :-)

I have no idea what that is supposed to mean. What is a "job
technician"?
>
> >"And it is to be expected that the easiest-to-get US amateur radio
> >license will have large numbers of licensees."
> >
> >That's better. I apologize for being vague in that statement the
first

>
> Are you absolutely SURE of the first sentence above?

As sure as I am of anything related to the subject.

> After all,
> the FCC is renewing Tech-Plusses who don't re-test on renewal
> as Technicians,

That's correct. Read the regs and look at the Speroni data. Ask any
Tech Plus who renewed after April 15, 2000.

> and "many" of the existing Techs will drop out,

That's not what I wrote. 5% per year is not "many" - it's one in 20.

> and aliens might invade the earth to be repulsed by morse code.

Never claimed that at all. What IS your problem with Morse code, Len?

> Or at least repulsed by long-time morsemen who will fight
> change (of any kind) to a moral, mortal end.   :-)

I have no idea what that is supposed to mean.

The whole code-test thing is a dead issue. FCC reduced the code test
for a US ham license to the absolute bare minimum under the treaty back
in April. Their comments, and their actions for the past 20+ years make
it clear that the treaty is the only reason they kept 5 wpm testing.
Unless FCC decides to ignore the treaty, no more reduction will occur
until the treaty changes.

Sure I'm "pro-code". I like the mode - for me and many other hams, it's
lots of fun, efficient, effective, and has lots of good features. Is
there something wrong with that?

What defines "arrogance", Brian. In what way do you perceive me as
arrogant? Is it because I don't share your beliefs or have disagreed
with you?

You've left out an important word prior to the words "other hams". The
word is "some". I give as I get generally. I think most people do.
I'm certain that you do not like or get along with everyone you meet in
life. Why should amateur radio be any different? I get along with most
people and like many people. I avoid some people and simply detest
others. Is it somehow different with you?

>
> Jim Kelley thinks I have nothing to say, you say I speak "volumes." Why
> don't you two huddle, then get back to me. I'm almost curious which way

If you have anything important to say, I don't think you've yet said it.
I'm not Jim Kelley so you'll have wait for his reaction. My own opinion
is that the chip I told you that you have on your shoulder has once
again made an appearance. If you feel like the bastard child at the
family reunion, do some self examination.

>saying that SSB didn't have to be all that expensive...

Sure - if you knew what you were doing and were willing to go whole-hog. But one of the real virtues of the old technologies and license structure was the incremental approach.

First, a prospective ham got a shortwave receiver and strung up some sort of antenna. Using that setup, the newcomer learned the code and got a feel for amateur procedures, propagation, and stuff like that. If the receiver was homemade or converted surplus, the newcomer learned some theory and practical skills in the process of building/converting it.

Once the new ham passed the Novice exam, it was time to set up a transmitter and T/R system, as well as an antenna that could transmit if that hadn't been doen already. There was a wait of many weeks between passing the tests and getting the license, too. The transmitter was usually quite simple because the Novice privileges were so limited.

When the Novice upgraded, he/she could take advantage of the new privileges by adding a VFO and possibly a modulator to the transmitter.

Improvements could be done incrementally at any time - better receiver, more powerful transmitter, etc. Sure, the gear was big and clunky and basic, but the new ham had a chance of understanding how it worked and in many cases had built or converted all or much of it, learning a lot in the process.

The SSB transceiver era changed all that.

>That really didn't cut it...

Actually it was more on the order of 10-15 watts carrier output on a good day. The DX-40 and DX-60 used the same system. I had a DX-20 for a time, then a Viking Adventurer, plus various homebrew and surplus rigs. Learned a lot from each one. Knew every wire and component in them by the time I sold or traded them away.

>a ham if that's what he wanted?

It would slow some of them down, particularly if the price was formerly $0. And
if the test was not passed, it was "come back in 31 days and try again. Bring
another $4, too."

>Have you priced some of the teenage toys these days...

I'm not there yet...
>
>BTW I was making $88.25 a week at Motorola in 1963 with a wife and

>Dunno. But I think the Woodstock populace might be an improvement over
>some of the characters I see at the ham swapmeets here...   :-)

I'm not sure what you mean. One thing I know about the hamfest crowds - they
are NOT necessarily a cross-section of th ham population. Many of us have other
obligations on a Sunday morning.

Most of the reasons I cited were not of my own creation. They came from a 1963
QST editorial.

I find I can no longer support the ARRL by being a member. What's the best
way to cancel a membership?

Try writing them a nice letter stating, due to diminished mental ability resulting in your involuntary commitment to a state mental hospital, that you are no longer able to function as a reasoning amateur radio operator, so would they please cancel your membership and return any refund so you can pay for the electro-shock treatments. I'm sure the League will be very understanding.

Well, Ken, some time ago on rec.radio.cb, someone was encouraging the "gang" to use a particular group of HF frequencies for their free-banding. I thought the list of frequencies looked familiar, then it struck me that he had listed the trans-Pacific and trans-Atlantic HF air-to-ground channels that Aeronautical Radio, Inc., uses to track long-range commercial airline passenger flights. When I pointed that out to him, explaining that he could possibly be endangering lives by encouraging HF free-banders to utilize those frequencies, I was flamed to a crisp.

Break whatever laws you desire, but in doing so, don't infringe upon other people's welfare and well-being.

>????? Wake up, Ed. He compared a 5 watt CW signal with a KW SSB.

If the only way he can make his point is by using a technically unfair comparison, I don't believe he has made it very well.

>That means that CW is the less robust mode? When you can clearly copy a
>CW signal at levels where SSB voice is totally unintelligible?

Then why the objection to sharing spectrum space with SSB signals?

>Fellow, you're beginning to sound like this is getting to you, you're
>losing your technical edge. Why?

I believe that OOK CW is more "robust" than SSB, but was noting that saying that a CW signal cannot be copied in the presence of an SSB signal is saying that it is not. I don;t know why some feel they need to tear down the value of CW in
order to "save" it.

>they must know what Real Hams like.

"Real hams" don't need to use the term "Real Hams." They understand that the
term is insultive and not in the spirit of ham radio. I know you know this.

73,
Ed Ha

>better mean something to you! I'm not the one who makes his living
>working at ARRL HQ -- you are!

Okay, so you were worried about me. Thanks, but I really can fend for myself. My salary is not tied in to the number of members ARRL has. Whether I have a job or not might be, but I don't think I would be the first to go. Any concerns I have about ARRL membership are tied in to the things that ARRL would have to stop doing if the membership base were to decrease significantly. Every year, there are things that I would like to see funded that cannot be funded. Those members would go a long way to making that happen. But over and above that, I think that the health of the Amateur Radio Service depends on more than the health of the ARRL, don't you?

But to reassure you, if I were to lose my job because too few hams chose to be ARRL members, I would be okay; I am reasonably sure I could secure employment elsewhere.

But thanks for thinking of me.

> Do you really believe that ARRL employees should not enjoy the same free-speech rights as other US citizens?

Nocoders have no code experience so their opinions about Morse code don't matter. Non-Extras are not fast enough at Morse code to have a valid opinion. Post April 15 Extras didn't prove their Morse code skill so they also have no right to post their personal opinions. Members of NCI shouldn't post their personal opinions. ARRL employees shouldn't post their personal opinions. See the pattern? Anyone who disagrees with Larry on the subject of Morse code testing should not post their personal opinions. :-)

>posts. Do you have any thoughts on that? Thanks, Brian

I would imagine that most people who use all caps do so to emphasize.

I think that those who use a capitilization only on the first character of a word do so to give it an Importance that it wouldn't otherwise have.

If you want to know the real reason that Steve uses capitalization, you could ask him. His email address is k4yz@aol.com. His answer would be more accurate than my speculation.

Sure seems to me that is what you are saying when you say CW cannot
succeed by standing on its own merits without an affirmative action
program. Either the ROI is there or it's not. If the ROI is there,
we don't need an affirmative action program. If the ROI is not there,
it doesn't deserve an affirmative action program.

I disagree and you cannot possibly know that for certain. I learned
Morse code in Cub Scouts because it was fun. It has been fun for
me for 52 years. I have never used CW or needed to use CW for an
emergency. I seriously doubt that I will ever use CW for an
emergency. Why don't you stop telling everyone what a pain in the
arse it was for you to learn Morse code and promote the fun aspect
of the mode with a little positive thinking?

Just re-read Fred W5YI's CQ article about "code is discriminatory",
based on comments to the FCC from NCI enthusiasts in New Zealand.

And now r.r.a.p. and NCI present a special documentary on the ZL
training effort for the upcoming $alt Lake City Olympic$.

We see a training field with various athletes engaged in various physical

routines. Standing before camera is REPORTER.

R: Good afternoon. The activities which you see behind me are the training exploits of the cr�me de la cr�me of the New Zealand Olympic aspirants. These fine young physical specimens have inspired the confidence of the masses for the upcoming Games. However, this silver cloud has a dark lining. There has recently been a great deal of controversy over the nature of the ZL Olympic team, and allegations have arisen that physically handicapped people are being seriously underrepresented in the upcoming Games. Charges of discrimination are being pressed upon the ZL Olympic Advisory Committee.

Camera changes to INTERVIEWEE 1, speaking into visible mike. Subtitles flash "Arthur Chesterton, Kiwi Society for the Prevention of Human Discrimination." I1 wears a sand-colored coat and a porkpie hat.

I1: It's blatant discrimination, that's what it is! The Olympic Games and Morse Code tests are unfair to athletes who have any physical handicap, or don't want to learn Morse.

R: But there are those who have competed successfully even with physical handicaps.

I1: Yes, but they weren't blind, or on crutches, or confined to a wheelchair.

R: But don't the nature of the games preclude the participation of anyone who falls into one of those categories?

I1: That's what I mean! It's blatant favoritism and unfair attitudes toward those who don't meet the standards.

R: But is there any need for those who don't fit the standards to compete in the games in the first place?

I1: Well, there's pride! Besides, if the games are unfair to handicapped people, perhaps they should be altered so that handicapped people would be able to participate.

R: But some say that the spirit of competition would be weakened by removing the stringent standards which have been set.

I1: Spirit of competition my eye! It's all commercialism and political hype, anyhow -- who would notice a few more players on the field? Er, so to speak.

Camera changes to INTERVIEWEE 2, also speaking into mike. Subtitles flash "Stanley Greenburt -- New Zealand Olympic Advisory

Board." I2 wears a typical business suit.

I2: The entire situation is ludicrous.

R: How so?

I2: Well, the spirit of the Games is being undermined by people who are obviously envious of those who are better gifted. Handicapped people have no place on the playing field. The Olympic Games represent the peak of physical perfection: tall, handsome, muscular athletes, their auburn hair waving in the breeze... their bare tanned arms glistening in the sun... their flimsy shorts delicately fluttering over their tight buttocks... Scene changes back to R at training field.

R: The controversy still rages, but already handicapped people have in fact begun training for the Olympic Games.

Camera shows person in a wheelchair rolling along a high-diving board, teetering at the edge, falling into the swimming pool, and failing to resurface. Bubbles rise. Switch to a blind person hurling a discus which sails into a nearby garbage can. Another blind person hurls a javelin which hits a passing person in the chest. Camera switches to deaf runners at a starting line. The gun goes off, but nobody moves. Switch to another person in a wheelchair holding a shotput, leaning back to throw it, being caught off-balance, and falling over backwards. Judges measure the distance the shotput rolls.

VOICE-OVER: Already have handicapped athletes begun the long and torturous task of training for the Olympic Games. The trainees shown here only represent a small fraction of the total number of the eager, gutsy individuals who have the courage to grasp for their wildest goals. Of these, perhaps a lucky few will go on to the actual Olympic Games. Hopes are high, as are spirits. This is indeed a chronicle of sheer heroism, a shining example to the youth of our nation. Truly shall this be a great legacy of pride.

Scene changes to R at ski slopes of Salt Lake City Utah.

R: At this time a blind ski team has entered the Winter Olympics in Salt Lake City, Utah. In order to illustrate their fine, nay, artistic, performing abilities, we now show you a film of their achievements, played to the music of Johann Strauss' "Blue Danube Waltz."

Roll clip with "Blue Danube" background music. Ski team, with dark glasses and white canes, performs all sorts of humorous stunts and ends up with a variety of fates, e.g. sailing off edge of cliff, running into trees or boulders, crashing into each other, plowing into crowds of people, smashing into judges' stand [7.8, 8.1, 7.4], and so on.

```
Total run time about 35 seconds.

Uhhhhhhhhh Dick, DSP handles SSB just fine. DSP doesn't mean the end
of SSB - it means enhanced SSB.

In article <964v3s$57i$1@nnrp1.deja.com>, Steven J Robeson, K4YZ <k4yz@my-deja.com> writes:

> Again, like your "views" of Ham Radio, you look from the outside
>in and make poorly substantiated judgements on that. Oh well. Nothing
>we haven't become accustomed to.

The "we-we" is being shaken again...

"Looking from the outside in" is what about 300 million Americans do towards US amateur radio. Using such a phrase implies some secrecy in US amateur radio. Unfortunately, for you or your "we," amateur radio is not secret, nor exclusive, nor mystical, nor religious. It is one of the most transparent of all hobbies, clear to anyone with a receiver within range of amateur transmissions.

That "outsiders" are somehow ignorant of activities, interests, or technology is itself an ignorant statement...or it presupposes a false and misleading sense of "royalty" by those licensed in the amateur radio service. Activities, interests, technology, and even individuals are well documented in publications of the ARRL, CQ Communications, and 73 magazine in addition to other newstand publications. All US amateur transmission modes must be "in clear" (without encryption or intent to deceive) by law.

Radio itself is a known technology, merely 105 years in existance since the first two radio communications done in 1896. The public is aware that radio in many forms exists, everything from two-way vehicular business radios to satellite relay communications. There is nothing exclusive to modes, methods, standards, in amateur radio that has not already been done in other radio services. Perhaps only the jargon and terminology pertinent to amateur radio's evolution is exclusive. Certainly the Belief Systems at work in amateur radio is exclusive. The Urban Myths propagated by certain self-centered amateurs as generalities of activity, basis, or purpose are all most exclusive and only self-serving, self-prideful.

One of the most damning of all implications is that no one else "knows anything about amateur radio" until one is licensed in that radio service. The only federal agency that regulates and licenses radio amateurs in the United States does NOT require any staff or Commissioners to hold amateur radio licenses. The FCC sets regulations, again by law, but they are not required to be a part of amateur radio. Why is there an assumption or implication that "outsiders know nothing at all," therefore they cannot be a part of any rule, regulation, or policy establishment?

Another misstatement is that amateur radio is a "service" to the nation. Throughout Title 47 the word "service" is a regulatory term refering to the type and kind of radio in various Parts of all US civil radio regulations. While amateur radio MAY provide an actual service during civil emergencies, US amateur radio is not defined with a specific purpose of providing emergency communications. In actual emergencies, all citizens, amateur radio licensees or not, are expected to come to the aid of their community or the nation as a whole Amateur radio in the US is stated to be an activity of and about communications for personal interest without monetary compensation. In a short form, it is a hobby.

Some individuals become so wrapped up in a hobby that it becomes a lifestyle, even a reason for existance. That is not a requirement for all, indeed most amateur radio enthusiasts view amateur radio as just a secondary activity for fun and relaxation. Why then should a hobby be structured in regulation as if it were a guild, trade, or even military service? The "incentive plan" structure of US amateur radio licensing was a rather thinly disguised aprenticeship-journeyman-master guild structure having no less than five "ranks" complete with "privileges" in the EM spectrum and with modes of operation. The names even carried emotional overtones of the supposed skill of the licensee, no doubt pleasing to those of "higher" rank who could look down on "lesser" classes.

It is false and misleading to say that anyone not licensed in the US amateur radio service "knows nothing" about amateur radio...until they are "properly" licensed. That is the statement of mysticsm, of religious fervor in a quasi-religious belief, of exclusivity and elitism that is self-serving, pompous, and arrogant on the part of the claimant. It is both emotional and puerile. It is not a statement of pride but rather denial or possibly insecurity.

>   I already DO have "bragging rights", Lennie. In more than one
\>field of endeavour.

This is yet another statement of puerile pomposity. If the only purpose of US amateur radio licensing is to establish "bragging rights" or "superiority" then it has obviously succeeded for some. Neither bragging rights nor superiority is part of the Basis and Purpose stated in Part 97...yet it is stated often by those who feel threatened by loss of rank, status, and privileges due to regulation changes. To those who prize rank, status, and privilege above all else in US amateur radio, who revere tradition with an almost fedayin fervor, newcomers or "ordinary" hobbyists are forgotten as "unimportant" or "lesser beings." In the whole of national regulation necessary in all of civil radio, that is a narrowminded selfish viewpoint which does not logically apply to regulations.

> G'night, Lennie. Mrs A has your dose of Geritol ready.

Again, typical of Robeson's remarks, a personal negative comment having nothing to do with the subject thread. It is an emotional outburst of someone who cannot control himself nor has the stamina or courage to argue a subject on the subject's merits or demerits. If that is the majority opinion of already-licensed US radio amateurs, then there is little hope for the survival of US amateur radio. Indeed, such a majority opinion does not belong in a civilized society. It belongs in barbarian cultures whose democratic principles are settled in school-yard fighting, only the physically-strongest surviving. Proponents do not understand that they may survive to be older and targets of the same taunts they now champion. They gain nothing.

>That's a real knee slapper, Len! Keep the yuks coming. Have any
>amateur radio related material?

Just the material that started this thread...newcomers to US

amateur radio who were either code-tested or not code-tested.
An Extra (N2EY) already commented on the subject...without
making a bunch of nonsense about who started it.

What amateur radio related material do you have? More
insults and deprecations of those who might be interested
in US amateur radio?

Or are you going into some diatribe of those who do not
believe in the US ARS policies as you do? Or are you simply
an unpleasant person towards those who might be interested
in a newer, more modern policy about and for the US ARS?

Well, I don't believe your statement is true, Larry. I hear hams checking into SSB nets when they cannot be heard on SSB. The CW signal stands out from the SSB signals plus noise. After all, CW has a double digit dB S/N advantage over SSB. A five watt CW signal is like a 150+ watt SSB signal.

Such texts exist, but one does have to read them. Have you? If not, you're being disingenuous when you say that nothing has been done. If you have read them and found them wanting, some direct, specific feedback to the publisher or authors would be a positive contribution -- certainly more positive than disparaging the efforts of those who are trying to educate hams about current technology.

> Most I know would spring a few bucks for such a boot. If they could find
> it.

Spread Spectrum fundamentals:
http://www.arrl.org/catalog/?item=3177

There have been several treatments of DSP techniques. See:
http://www.arrl.org/tis/info/dsp.html#signals
and the ARRL Handbook.

Yes, more is needed, and more will be forthcoming.

> Instead all they get is criticism.

The only ones who get criticism are those who repeatedly disparage the efforts of the folks who are promoting new techniques by claiming that those folks have an "Agenda" that simply doesn't exist.

> Please
> > tell us about the much larger group you have interacted with and why they are
> > so very different from the hams I have met.

Because, Dick, you tend to meet prinicipally those hams who are interested in the same things you are since you meet them in the course of doing what interests you. That gives you a biased view of what hams think, just as those who stay away from the things that interest you tend to have opposite biases.

> Ed, I live out here among them, talk to hams almost daily, have

I'm curious: How do you know how Ed spends his time?

Why don't you simply accept that reasonable people can evaluate similar information and reach different conclusions? It seems clear to me that you think there is an agenda to eliminate CW as a mode within ham radio by eliminating Morse testing, thus drying up the pool of CW operators. (Please correct me if I'm misstating your views.) Ed, on the other hand, has said that he thinks that the pool of operators will NOT dry up because of the inherent qualities of CW. (He'll correct me if I'm wrong about his opinions, I'm sure.) If Ed believes that, clearly he's not promoting any such agenda as you are claiming. Now, he may be wrong in what be thinks will happen, but if he is it's still an honestly held belief that CW will persist, not be eliminated.

> small percentage of the attendance.

If that were the only contact HQ staff has with hams your point would be valid. But it's not. Even at hamfests and conventions, there is actually much more individual contact than that -- on the floor of the hamfest, in the hallways, at lunches and dinners, etc. I don't get out to hamfests nearly as much as Ed does (or nearly as much as I used to), but I doubt I was ever at a hamfest that I didn't talk individually (not in a prepared speech) to at least 50 hams, and at the larger hamfests far more. And that's just the hamfests. Factor in the phone calls, emails and HQ visitors and the number is much larger. Plus, aside from his professional duties, Ed is quite active on the air, just like you, and thus has access to the same basic information source.

> Far more wouldn't know you from
> Adam, I'm sorry to say. Atg that, you're probabaly the best known
> Newingtonite.

If you're talking about rrap or RFI forums, true. But go to a DX forum and ask who at ARRL HQ they know best. Go to an emergency communications forum and ask who they know best. Go to an educational forum and ask who they know best. In none of those cases will Ed's name even come up. This is an example, Dick, of your misplaced belief that your own experience extrapolates neatly to ham radio as a whole. You fail to fully recognize that the experiences of others may be markedly different from your own and may lead to their holding different opinions. And that even those with similar experiences may come to different conclusions, all without having "Agendas" other than to enjoy and contribute to ham radio.

> Many hans just don't buy the assertion of many in your

Then why not simply believe that?

> Just what does "modernize" mean
> as used in all the rhetoric, then?

Adding modern techniques to our amateur toolbox without abandoning old ones that we still find useful -- or even just enjoyable.

> That, to them, is the thrust of the
> urge to "modernize". What else could it mean? That just because there is
> utility in using spread spectrum techniques in many communications
> venues that we actually need it in ham radio? I don't think so, and

Dick, why don't you just stick to telling us what you believe? You have no justification for attempting to speak for the rest of ham radio. Trying to strengthen your argument by claiming that unnamed masses agree with you is a weak rhetorical device.

Jon

>
> As DSP technology improves, and right now, it is good to at least 10 MHz, we are literally going to see software-to-antenna radios. They will be readily programmable to be any mode radio that we want. To make design changes, one will download new code. The FM, SSB, SS, data, digital voice or CW signals will be encoded and decoded right in software.
>
> In the long run, these radio techniques will increase flexibility and interoperability of radios. The FCC may very well make changes in the way that it allocates spectrum and operating authority as a result.
>
> Spread Spectrum is at least as revolutionary a change as was AM-SSB; the former was, at least initially, accomplished by taking an AM signal and running it through a filter. SS and digital voice are more different than SSB and FM than was AM/SSB. Using SS, and/or trunking techniques, the very way spectrum is used in the Amateur Radio Service could be changed. Instead of allocating frequency pairs that are unused most of the time, that block of spectrum could be accessed by multiple users, each with their own spreading codes, thus limiting the use of the "repeater" bands not by the number of potential users, but by the number of actual users. No more "no pairs available" and coordination difficulties. Not as sweeping a change as AM to SSB?

I can see some applications on VHF/UHF where SS could solve a few problems that have been politically knotty, and thus avoided by both FCC and ARRL. The repeater situation should have never been allowed to degenerate into the sort of situation where all pairs are tied up while there is mostly silence on those bands, and much of the activity one does hear makes you want to turn off your HT.

But of course your discussion above addresses VHF/UHF, and not HF where there is simply no reason to even consider such a change-unless it is considered to be necessary just because the modes in use on HF must be considered old and obsolete, thus unusable. That's an attitude attributable mostly to people who spend most of their time trying to change things whether or not they need changing instead of using HF ham radio.

This little scrap has been ongoing far longer than I've been on usenet. I don't mean to attribute any particular part of it to you personally, just that you have shown that you agree with the thrust, that ham radio is derelict in having not widely adopted all those new modes which have done so well in commercial and government use. Overlooked is the widely diverging orientation between ham radio, especially HF, and those other services which have largely abandoned HF.

I believe the main reason for that is there is largely no need felt by most hams for ir, particularily on HF. And most of the spectral problems on VHF/UHF are because of outdated schemes and regulations instead of modal shortcomings. That doesn't mean that there is no benefit at all to making wholesale changes, just that there is no demonstraded need. The "installed base" principle DOES apply.

The political problems on VHF/UHF might be releived by changing to SS but look at the huge cost involved for the small benefit, and I really don't think most hams would benefit at all. I see it as merely "change for the sake of change". With the serious decline in use of much of the present repeater system having occurred I doubt if much activty would survive. Would I buy a completely new VHF rig to replace the FM rig that I rarely use now? I seriously doubt it, unless some new factor became involved. Replacing all the FM gear now in use is a huge project that I just don't see happening at all, wsithout some more compelling reason than just updating the technology. Just as it has not happened in most commercial and governmental organizations. I know that most Public Safety organizations have not changed to more modern modes and still use point to point FM and repeaters. Some of those that have have moved to trunked systems have had reason to regret it, at least at times.

The idea that a hugely complex system can be made to be so reliable that it won't fail is still a concept not yet realized.

>
> Is that what you think that retired Dale Hatfield from the FCC was seeking to
> do?

Of course not. I see that my wording was a bit overly strong. On the other hand, I sure do believe that he has been greatly influenced by the stridency of people like Carl Stevenson. Don't you? After we've been flatly told that "a few people can change the world and just did"? After FCC near-totally ignored the ARRL BOD in the restructuring decision and gave NCI almost everything they
whined for and some they didn't?

> >And we refuse to be intimidated or browbeat

>
> There's that "agenda" thing again. Do you really think that the only reason I
> say that I believe more hams should learn the fundamentals of modern
> communications technology is to "get rid of the code?"

No, Ed, you're not nearly the main part of the problem. You're only a side feature of it, in that you have decided to agree to cave in to the shrillness that is total opposition to ANY Morse code operational test requirement. Evidently the entire ARRL heirachy has. The rest of it I see as being used mainly for justification.
Three or four years ago, not long after I first landed on this NG I said something about "Where's the beef? Why isn't there any gear available to actually use if these glitzy new modes are so great? When are some of the strident advocates going to put their expertise where their mouths are?"

If they are in fact all that beneficial and applicable to ham radio why are there NO renditions available today on the market, even as kits?

I looked over the TAPR website you gave, and yes indeed, I believe it is proper to add a few questions on that material to the question pools.

But the tests, instead of being reduced in scope and number of
questions, would be better expanded when including new material,
otherwise they actually are being reduced in scope of coverage.

"ARRL" is all capitals. :-)

I don't think I'm far afield on some who have quasi-religious
thoughts on US amateur radio. I used to call them
"ama-baptists" for their proselyting but others got confused
and thought I was berating the AMA.   :-)

While some folks use Yaesu and Kenwood radios, I'll swear
that they are using Icons.   :-)

[sorry, I shouldn't swear, Jim N2EY doesn't like it... :-)]

"Code" is a four-letter word.

Watch how many will think the above sentence is swearing
or a "denunciation" of morse code!   :-)

I'm not sure that it is a "problem". I think that it is unrealistic to
believe that modern hams (of all walks of life) should be able to fix
their modern gear...

I think it is quite logical that if applicants are not required to
learn the code before becoming a ham, then there will be far fewer who
will take up CW afterwards. To think otherwise flies in the face of

basic advertising theory.

Just think if one of QST's advertisers could force all hams to try his rig before getting a license. Sure many would hate it at first, but after awhile some would find that they actually did like it. Sales would go up and the rig would find increased use on the bands. Then after some years the forced rig use requirement goes away. Of course sales and rig use among new hams will go down. It's a slam dunk... :-)

However, will the elimination/reduction of forced code testing be bad or good for the hobby as a whole, not just CW, is really the important point...

CW ops can go anywhere on most bands for a QSO. Yet they usually stick to the agreed upon CW areas of the bands. Do you have such a low opinion of phone ops that you don't think that they can abide by a gentleman's agreement to do likewise? I'll bet 95% of them can. They could and did when they voluntarily divided up the phone bands between

AM and SSB during the transition. Maybe a concerted education effort
by ARRL on your 160 meter problem would help. Better than more
government regulation to solve a ham problem, don't you think...

>Cecil wanted to engage someone in a 5 wpm
>QSO in the DX windows, just because he can.

I think Cecil wanted to make a point. And perhaps get a goat. But I
doubt that he really intends to violate the gentleman's agreement of
chatting in the DX area. But then you knew that didn't you. You were
also trying to make a point and perhaps get a goat... :-)

>The question for you Vince then is twofold:
>Is publishing questions from PAST tests illegal when
>done by those college prep course publishers?

Let me have a go at this one.

It's not illegal for at least two reasons:

1) The published tests are intentionally released by the testing agency for publication.
2) The published tests are no longer used - they really are past tests, not current ones.

>If the answer to the first question is NO, then why
>should Bash be held to a different standard of law?

Because Bash violated both of the above conditions. The tests he published were not intentionally released for publication by the FCC, and they were not questions which had been removed from use in testing.

Let me ask this, Bill: If a college prep course publisher somehow got hold of current test questions, and published them, would that be OK?
>
>If the Q&A was (by some miracle) made secret again,
>would you complain when people publised the questions
>they remembered from PAST tests on a centralized web site?

I would, if the intent of making them secret was to keep the exact Q&A secret.

What Bash really did was to expose the fact that the FCC did not have an enormous stack of different tests in use. Prosecuting him would have publicized that fact and probably greatly increased sales.

All academic now. Bash's actions are ancient history. No way is the FCC going to get involved in ham testing in the foreseeable future other than retesting as part of enforcement actions.

Yup. That's what really caused the move from AM to SSB - it became cheaper to run SSB than AM at the power levels hams wanted to use.

AM gear is cheaper and simpler than SSB at low power levels. But once you have an SSB signal generated, building up the power level is cheaper than with AM. The development of the amateur HF heterodyne transceiver (which uses the same frequency-determining parts for both T and R) nailed it for SSB.

Oddly enough, the first true HF amateur heterodyne transceiver design I have been able to dig up is a CW transceiver.

You are probably not far wrong. QCWA asked for just that.

Funny thing is, the 1968-1969 changes radically decreased the amount of phone
spectrum available to Generals in the ham bands from 80 thru 15 meters. Then,
about 1972, the FCC began widening the 'phone bands, so that over time allmost
all of the "lost" phone spectrum was regained by Generals.

I would think that a 23db power advantage to the other mode might do
it.
(5 watts vs 1500)

??? Well, when you finally get the answer let me know. I said nothing
about any such thing. I said that once it was much easier for a ham to
become a radio engineer since the technology was easier to learn.

Using tools to make tasks a bit easier is not the same as bypassing knowlege.
You'd still have to know something about propogation or antenna specs in order
to use the software Ed is talking about. The tediousness of hand calculations,
which are more subject to human error, is what's eliminated.

It's getting there. There's only one code test now, and that's 5 WPM for the class of licenses that require it.

Then you're easily impressed, Dick.

But your biggest problem is having no idea.

I'm interested in a newer, more modern policy about and for the US ARS.
Where can I read more?

Hey, I just read where Canada needs an NCI rep.

Exactly. I agree completely with that statement. The bottom line
is that the cost benefit no longer justifies the need for trained
CW ops in military and commercial.

>Amateur radio does not have these economic considerations,

WRONG!!!

My personal time is absolutly under the same rules as
commercial/military indetermining what I do.

>but
>we still have to deal with the fact that learning and gaining useful
>proficiency in Morse code still requires a considerable amount of
>dedicated effort on the part of the operators who wish to use it.

Ageed.

>In
>the past, this effort was motivated and incentivized by the promise
>of increased operating privileges; now that that incentive has been
>removed, there will, for sure, be far fewer people even bothering to
>learn and gain useful proficiency in Morse code.

Probably true, but that is simply the FCC recognition that there
is NO justifiable reason to warrant having all new HF hams
learn CW to the degree warranted in the past. To wit...the FCC
acknowledges the cost to the individual can not be justified
by any rational to sustain the old requirements for CW ability
at 13 or 20 wpm.

>The Morse/CW mode continued to survive and flourish only due to
>the code testing requirement.

Which states volumes as to the true worth of the mode. It seems
you had to mandate code learning by all to obtain a small subset
of proponents. That's truly a waste of a great many people's time.

> In the absence of the requirement,
>the numbers of Morse/CW mode users will most likely shrink to a
>small fraction of their present numbers, at least in the United States.

That is then your own problem (if you see it as a
problem at all).

>European/Asian/African operators don't seem to have as much of a
>laziness problem as we Americans do.

So why is it that so many countries are now moving to end all
but a 5 wpm test?

Cheers,
Bill K2UNK

Yet Dick would be unshaken if the activities of hams who frequent 440
and above were done away with. It would be hard to think of a clearer
example of the destructive attitude I was referring to.

This was exactly what I expected. And exactly wny Lennie Anderson's true
colors come out. This creep has no valid concern for the future of Amatuer
Radio in ANY form.

>The professionals were prepared with "snazzy technology" which worked
according to plan.

Yes, they did. And they weren't the only ones.

>Where were the emergency-prepared amateurs?

In the hospitals providing internal communications. At the fire departments. At the shelters. Not that YOU would have known anything about them.

>The Northridge Earthquake happened here 7 years ago. When the
>Great K4YZ was confronted with a description of emergency
>preparedness at work (about two years ago) he passed it off
>as "...small states cannot afford expensive emergency equipment"
>and some other minor rationales for His area not being prepared.

No, Lennie...YOU dismiss the idea that everyone had multimillion budgets for the gadgetry that you profess is so prolific in SoCal.

>The question still remains - Where were the radio amateurs here
>and a few years earlier in the Bay Area of middle California who
>have constantly kept the mantra of "radio amateurs 'always come
>through' during emergencies?"

There is NO question. It was in the written press, both Amatuer and popular media, on television (April Moell was interviewed at one hospital as they helped with internal communications) and on the radio (commercial broadcast, not 2M.

>Both Northridge and Loma Prieta earthquakes happend over 7 years ago. How much time is >needed? Or isn't the original post of this thread just some kind of emotional rant by someone >who can only function on the newsgroups and needs the forum for whatever personal >reasons?

"....needs the forum for whatever personal reasons?"......

HAHAHAHAHAHAHAHAHAHAHAHA

Coming from a CREEP like you, this is HILLARIOUS! This is your ONLY forum!

>Perhaps it is time to recognize that amateur radio is really only a hobby, an enjoyable hobby, >one that _might_ be of service to the community but not some fall-back activity given >lip-service for years but seldom done.

I am sure THAT'S how YOU percieve it, however, again, you dismiss the ONGOING support that Amateur Radio enjoys from COUNTLESS private AND governmental agencies for it's SERVICE!

Dick Carroll wrote:
>
> The training session was conducted by a very competent young meteoroligist from the National Weather Service. One of his points was that ham radio operators are invaluable in the conduct of this program. He noted that the regional NWS HQ where the regional doppler radar is located has a ham radio station with at least one operator active each time severe storms are anticipated, along with the many trained hams who are weather spotters in the field, and that they consider this effort to be critical to the success of effective weather warning.

Did he happen to mention that only those hams who passed a "real" exam -- not the ones given during the last two decades -- are contributing to the success of the NWS activities? If not, maybe the NWS can't tell the difference between the "real"
hams and the others. Maybe there is no difference.

>If you'd looked, you would have found articles that answer those questions in QST.
>Things are not at all how you try to portray them.

That's a given. Lennie is lost. A complete idiot.

>If you were at all personally involved in emergency preparedness you would know the extent
>to which police and fire have improved their ability to respond since the Oklahoma City >disaster.

Lennie can't prepare himself top take a good dump, let alone be able to respond to ANY kind of emergency.

How do I know this? Just look at all the crap he spews here. Not a bit of validity to it. Just more "I Hate Ham Radio And This Is How I Will Get Back At Them". Not a shred of truth to it.

>And you would also know the extent to which amateur radio is an integral part of the >response plan in California. But you don't know, and so you just make stupid comments >about it in an attempt to vilify amateur radio.

Tens-of-thousands of dollars are spent in CA to implement an Amateur Radio response in almost all aspects of planning where communications is involved. Of course Lennie ignores this...as he does EVERY fact that dispells his LIES.

And yes...Leonard H Anderson is a liar. Unmitigated. Unrepentant. Unrelenting.

>Who needs you?

Who indeed.

You've missed the point entirely. Either that, or you like
shifting the question to your liking. The Commission will do what
it wants, say what it wants, which is exactly what it's doing. It
doesn't have to address any petitions, owes no allegiance to
anyone.

>>If you'd looked, you would have found articles that answer those
>>questions in QST.

>I'm not a subscriber to QST. Please tell all for the benefit of those
>who haven't been through one.

Which only FURTHER substantiates my assertion that you have NO valid basis upon which to make anything even REMOTELY approximating an "informed opinion".

>Sorry, but a rather large press corps and broadcasting covered
>the event. I'm not stating anything that wasn't already reported
>or seen by the administration.

I believe it was KTLA that interviewed April Moell during this event as they helped hospitals with internal communications and routing of patients.

> Is there more?   Please, tell all so that everyone will benefit.

It's been expressed by more than ONE person on more than one occassion. You always dismiss it as irrelevant. I guess that's what it is when it ruins your lying rants, Anderson.

>If there is anyone "villifying" something it is Jim Kelley who
>seems to imagine more than what was ever said.

You mean "villifying" as in dispelling even more of your lying? More of your cowardly ramblings?

>The Los Angeles area was already so planned, drilled, exercised and did its
task
>well. How did amateur radio licensees help in this effort?

No need to repost the hundreds of roles that they played, Lennie. It happend, CONTRARY to the way YOU assert that it did.

>Subject: Re: This Should Be A Warning
>From: lenover21@aol.com (Len Over 21)

>Date: 02/14/01 2:33 AM Eastern Standard Time <<<<< Time noted

Had to stay up late so Mrs A the counsellor couldn't read over your shoulder and see what a patheic, pathological liar you are?

>For your benefit, my name is Leonard H. Anderson, not "Mr. Len."
>My mailing address is 10048 Lanark Street, Sun Valley, CA,
>91352...located in the eastern part of the San Fernando Valley
>area of Los Angeles.

Jerry, just call him "Lennie". Or Lennie NoCalls. Or Lennie the Loser. Lennie the Licenseless. As for his address...well...If I were one of his neighbors, I wouldn't want this creep broadcasting that information because it can potentially lower property values. Who want to live next to a creep like this?

>That was not a subject of my response. As a citizen-volunteer
>myself on various occaisions, I've never asked nor demanded
>"credit" or anything else. That was not the subject or intent (not
>even implicit) of my posting.

However YOU try to make some point of how Ham Radio allegedly wasn't a part of the recovery efforts in SoCal earthquakes just becuase there are no banner headlines "HAM RADIO SAVES DAY" in the LA Times.

>That isn't so, but it is convenient for the purpose of achieving message
points in a newsgroup.

What "points", Lennie? In the last 12 months alone it's happened in three different areas of the United States, each time Ham Radio was used to supplement both commercial and Public Saftey nets. It happend. It's a fact. And it's contrary to YOUR rants that it doesn't!

> I asked simply "where were they?" They were not in evidence, either observed
or on >broadcast radio and television

Oh...I SEE ! ! ! ! Just because they weren't upfront in the cameras, it "didn't happen".

I guess that since there weren't any "human interest" pieces on cooks and bakers during those events, no one got fed?

>The tower causing the total electrical power
>outage was jury-rigged upright within four hours by utility workers

>but the entire area had to come back up through a "black start"
>(power term denoting putting the electric power grid up from a
>total absence of input).

Lennie tries to impress us with his use of power company vernacular.

>You are trying to imply that I said bad things about radio
>amateurs. I did not do so.

Leonard H Anderson of 10048 Lanark Street, Sun Valley CA 91352 is a LIAR....

Again........

>I know more than many radio amateurs about communications
>in both regular services as well as REAL emergencies.

Now Lennie exerts his OWN "rank" on Amateur Radio operators. HE knows more.

NOT!

>Why go into ranting of an India quake when the USA has already had more than one in the >last seven years?

The point was NOT about emergency preparedness. It was about maintaining a positive impression on the political arena that may hold sway over our allocations, and even our existance.

>Just exactly who "slighted volunteers?"

You did. Shall we rehash your "Civil Defense is a joke" slurrs?

>I volunteered to help in searching the Veteran's Hospital collapse in the Sylmar Earthquake >of 1971. Nobody gave me any praise, coffee, certificate of appreciation or anything else >beside a handshake and that was enough for me.

So you got dirty once 30 years ago. Go figure. Some of us have been doing it FOR 30 years, and continue to do so to this day.

>You are free to call me all the names you want, imagine whatever you wish (quite a bit), but >physical violence is going to be more difficult to accomplish than you think.

At this point in time I would thing that a prudent man would stop and ask WHY he invokes such a response in more than one person. Of course Lennie is NOT prudent (eg: posting his address) and like others of his ilk, it's ALWAY'S the other guys fault.

>Has anyone briefed themselves on the California ACS or the OES, do they know anything >about SHARES?

Well, obviously you HAVEN'T or you'd know that each has a place for Amateur Radio.

>Or is everyone just reading what is written in ham organization literature and then imagining >what real emergencies are like, how they feel, all the while sitting safe in their ham shacks...?

In as much as you have acknowledged NOT subscribing to one of the three major Amateur Radio publications in the United States, how would YOU know what's in any of that literature?

Nothing like facts to once again shoot a hole in Lennie the Liar's rants.

Putz.

>has already had more than one in the last seven years?

The point, Most Ignorant One, was NOT about "emergency preparedness"...It WAS about the perception of Amateur Radio as JUST a hobby and the consequences of that perception as it pertains to dealing with politicians.

A point convieniently avoided by The Ranting One in order to make another "Amateur Radio Ain't **** " post. And as usual, as equally ineffective.

Annoying, but ineffective.

>Sorry, I'm still a professional in radio who got started legally in 24/7 HF communications in >1953.

How's that, Lennie? You said you let your "lifetime" GROL expire last October 12th. Now you are COMPLETELY unlicensed.

>My main purpose on getting into this newsgroup was to argue the elimination of the morse >code test for the amateur radio license test. Since that time a bit over 3 years ago, I have
>been a target of personal abuse by those who cannot defend the sanctity or need of the >morse code test for an amateur radio license.

If he were able to tell the truth, jerry, he would tell you how in at least one case (mine) he spent three months calling me a "jackbooted thug", a "neo-nazi elitist", etc, etc. Then when it get's turned BACK on him, HE is a "victim".

What he IS is a LIAR.

Rant on, Lennie rant on...we know you for the liar and malcontent you are, and your word and your character count for nothing here. YOU have seen to that.

There certainly is. That's because they're still cognizant of
their own "image." It's a main goal of institutions, especially
government institutions, to leave the public with the impression
that all decisions are arrived at logically. Unfortunately, same
organizations always manage to blow huge holes in that logic when
they get around to drafting their R&Os.

A second reason is that they're also cognizant of the touchy
political nature of the hobby as being "technical," and want to
stay above that fray. But again, the bottom line ALWAYS comes
out because sooner or later, they have to release an R&O.

Regards,
Vince, WB2EZG

But you said they owe no allegiance to anyone. So why would they care
about the public impression?

Jon

Not anymore, Dick. Seems to me, anyone who readily recognizes aural
Morse code characters can do so at 5 wpm.

How can they "get nailed" and why do they "have to keep quiet"
(your words) when they can do what they want and say what they want?

You didn't answer my question, Dick. Exactly what part of ham radio
does an Extra class licensee graduate from? The Extra class license
is nothing more than a minimum requirements entrance exam into the
Extra class.

>  You can regard that as hobby if you wish. I call it service.

But it is voluntary service, Dick. It is not required. Hams who
don't enjoy public service don't have to do it. Voluntary public
service is usually classified as a hobby even outside of ham radio.

>But you said they owe no allegiance to anyone. So why would they
>care about the public impression?

I just told you, Jon. The political environment mandates that FCC doesn't come across as dictatorial, that they work with, not against the infrastructure in making logical decisions. Because when they're viewed as working to counter purposes, it stirs up an underlying issue with Congress as to whether FCC should exist at all.

Regards,
Vince, WB2EZG

Now here's a candidate for RF exposure guidlines!

If they want to teach about "gay" history why don't they go all the way back to
Sodom and Gamorah?

They that's where the "allegiance" is.  If Congress isn't happy they write
smaller checks.
But I think that the answer to whom they owe their allegiance to is the
president.  Aren't they an arm of the executive branch like the EPA?

Which is more important to you, Bruce? Furthering anti-discrimination awareness, or personal liberties of an individual or group of individuals? Be careful how you answer.

Also from Webster's: "service - the act of copulating with a female
animal"

But neither of those definitions is applicable. The Webster's definition
that *is* applicable is:

service - a facility supplying some public demand <telephone ~><bus ~>

Jon

No, although that's a common misconception. See:

http://www.fcc.gov/cib/handbook.html#communications

wherein it says:

"The FCC was established by the Communications Act of 1934 as an independent United States government agency directly responsible to Congress."

 Aw, shucks...no opportunity for a comeback?
```

IMHO, once hams have met the
> requirements of our licensing structure, they are free to learn, or not learn,
> as they will. Look at the reaction here by one individual just because I said
> that hams should (not must) learn modern radio technology.

Thats what you think you said, but youi forgot that you incoirporated
the output of two FCC officials on the same subject, and that was
included with your opinion. You already know, if you want to recognize
it, my beliefs on hte subjects of what hams should know.

Would you really
> want to see that reaction multiplied by encoding that Hare-brained idea into a

> rest.

Which makes the validity and quality of the tests even more imppotant.

It does no good to have all these high flown beliefs if the
implementation of testing is inadequately poor. I believe it is. You say
you don't. The knowledge level of the "average ham", or lack of it, is
the proof.

That;s your story, and you're sticking to it.
But that's right- a large percentage of them become hams because they
want to talk on the radio, and not much else.

First off some huge percentage of all hams have no idea what ss is let
alone it's potential upsides and downsides. I'm quite convinced that
if they did understand ss and there was a proposal on the table to
implement HF ss there would be a major uproar in opposition.
>
Second, I'm not opposed to ss as a mode if used in appropriate chunks
of ham spectrum space. Which does NOT include 7.000-7.300 Mhz . .
>
>Also, do you think that those who are interested in bringing modern
>technologies into ham radio are necessarily anti-CW and thus need to be
>suppressed?
>
Of course not. I'm out here applauding the work being done in the
field of HF narrowband digital modes. This work is gonna lead to
something very big one of these days. Note that for the most part
those contributers are not playing the lame old "catch up with the
commercials" game ss proponents are playing.
>
>I agree that the historical model of amateur adoption of technology
>probably continues to be the best path. I see no reason why FHSS or any
>other technology that confers real benefits should not follow that path.
>I don't think the HF amateur bands are best suited to that particular
>technology, nor that the potential benefits of that technology are
>maximized at HF. But I think there are real potential benefits at VHF
>and UHF, I think those benefits can begin to be realized without unduly
>bothering existing narrowband users,
>
We're 100% agreed here. There's plenty of absolutely dead VHF/UHF ham
spectrum space, use it or lose it, go for it. Or make it happen or
quit babbling about it.
>
>and I'm disappointed that we
>haven't made more progress along those lines.
>
The question is "Why hasn't more progress been made?". I suspect the
answer lies in the realities of Marketing 101. "I already have a 56.6
kbs connection", etc. My own bottom line is that if ss stays above 30
Mhz where it belongs I have no problem with or particular interest in
ss.
>
>I don't perceive one iota
>of anti-CW agenda in that.

My comments were aimed at Squiggy's agenda which is a rabid anti-cw
stance from top to bottom.

Ed, I have never considered you a smartass, but I do believe you're about to get there. Most of my information on the subject has been gleaned not from my qso's but from listening to that of others.
You really are ignoring reality, and I'm far from the only other ham to know it.

>Brian. Do you think they were way off base?
>--

Those guys weren't "forward looking", they implemented a
commercialized technology - which is exactly what this ss thrash is
all about.

>

AT&T commercialized tranoceanic ssb years before it first showed up on
the ham bands in 1934. In the case of ssb the mode was and is
compatible with the existing HF modes and existing regulations .
Spread spectrum is neither which is one big difference.

It's strange that you chose that analogy. It's usually the people that have been driving for years that are in the way. You know the type; The drive below the minimum speed limit (45 MPH on most limit access freeways), they can't see over the top of the steering wheel, and when you pass them, all you see is the top of a head that has white hair on it.

> Yet Dick would be unshaken if the activities of hams who frequent 440 and above were done away with. It would be hard to think of a clearer example of the destructive attitude I was referring to.

Except that: Dick has seen firsthand, during a thirty year career, how the public need for frequencies outweighs any "hobby" need, more especially when those frequencies go virtually unused. His attitudes on this subject are far from new.

Factually, if there was any activity in the region I would have most likely joined in, even at the microwave frequencies. I just don't like talking to myself. Why do you think I bought a 440 rig in the first place? Once for a while there acutually was a 440 machine in range, but its infrequent use led to its abandonment. I doubt it would shake all that many if much of out UHF/SHF spectrum was taken. I still have a dualband HT, and take it along with I travel. The lack of use on those allocations is good reason for their withdrawal.

So you Great Leaders at Newington carry on. I believe we're finally beginning to see where you really are coming from.
(We know, you're posting here "personally")

Hell no, man, a Real Ham� is one who has a piece of paper in his pocket
and is smart enough to find an AC plug for the "radio" and, maybe, to
plug a PL259 into it. Just don't ask him to solder on the PL259.

WA8ULX should pay more attention to the rules and regulations part of the
exams. He lived and operated from his current QTH for roughly two years before
changing his address with the FCC.

>Oh, so they *do* owe an allegiance: to Congress.

No, they're independent; all they "owe" is to render
respectful decisions, i.e., ones that don't take on
a dictatorial flavor.

> "The FCC was established by the Communications
>Act of 1934 as an independent United States government
>agency directly responsible to Congress."

Your first and second statements are at odds, and implies
confusion. The second statement in itself again is somewhat
```

at odds: being "independent" and "responsible to" doesn't actually mesh. Then again, such sentence construction doesn't surprise me when it comes to politics.

And that's what you're back to: politics. Thus, returning to our original subject, a Commission-to-Amateur Radio relationship doesn't exist in a vacuum. FCC has to interact with the President, the Congress, and legislative branches. When the Commission is advised to bring a certain administration policy to completion, it's the Commission's job to do it seamlessly the way it sees fit. But they won't arrive at a seamless solution for Joe Ham, because the Commission's business IS business, and not one whit having to do with education per se. Thus no surprise when it comes to their recent R&O. Given the politics, it's simply beyond their capability to write effectively without being caught in a logic hole. That's why politics, and politicians, are far worse than any disease, because they go on forever.

Regards,
Vince, WB2EZG

Yes, although Ed has been pretty clear that he wants to ensure that existing users will have protection. Me, I'm from Missouri on this one: I want to see specific proposals and clear analyses of the effect of proposed operations on narrowband users before I support the concept, although I'm not willing to reject the idea of HF SS out-of-hand. So far, no such analyses have been forthcoming. Nor have any specific proposals other than carte blanche.

Mine too. And I'm glad to see that you understand that it's not my, Ed's or ARRL's agenda. Now if you could explain that to Dick, because I've had no luck doing so.

> I'm having a very difficult time believing that a mode which scatters

> That's my whole and only problem with HF wideband modes.

I think it may be possible to implement limited FHSS on HF without unduly affecting narrowband users, although I suspect the necessary limitations will reduce the utility of HF SS. Again, I'll await a specific proposal before making any final commitment.

> >I agree that most hams aren't chomping at the bit to see SS implemented.

Exactly.

Details, details, the devil's in the details.

> Note that for the most part
> those contributers are not playing the lame old "catch up with the

The ways in which I would like to see hams using SS have little to do with what's happening commercially.

I don't think it has even gotten to that stage. There is as yet no amateur SS implementation against which to compare your 56-k connection. When there is, I hope it's more than just a means of implementing a high-speed connection.

In other words, decisions that Congress doesn't feel like overturning.
Ultimately, Congress has the power, and the FCC knows it.

> > "The FCC was established by the Communications

That's only because you fail to put the sentence in context.
"Independent" means "independent of the executive branch." With that in
mind, the sentence makes perfect sense.

Their business is the public interest. Clearly, they view promotion of business as part of that public interest, largely because Congress told them to. I'm not always comfortable with the degree to which business interests are promoted by the FCC, but while they are promoting them there is nothing secretive about it.

>Clerks at convenience stores sell cigarettes but not all of them smoke.
>
>Are you trying to gain a seat on the commission or would you like to be a ham?

Clerks at service meat counters in supermarkets sell hams but they don't have to be one.

Dave, you make truly stupid analogies...sort of like your stated CW order-wire for RTTY which you say (now) was some kind of "State Department procedure."   :-)

No one has to be accountable to your judgement, certainly not all the newcomers to US amateur radio who chose non-code-test licenses over code-tested ones by a large margin. That will continue if past is prologue...and it does indeed look like that.

"...going FOR the future." You have terrible reading comprehension skills, N2EY.

The future starts immediately after reading this. :-)

>>Denial of the obvious is not a good thing, benefits no one,
>>cannot change official positions.
>
>Then why do you keep denying the obvious errors you have made in your posts?

Why are you denying you've made obvious errors in the thread?
I told you the original conditions. You want to change the conditions to suit your pro-code agenda and argue with someone. Put it to rest.

Newcomers to US amateur radio are going more to no-code.

That is not an error. Acceptance is the first step to healing.

Agreed. Learning formulas is easier than memorization...

>than it is to memorize over 1000 questions without understanding.

Disagree, unless you're already an engineer. Electronics questions
that would take months to learn are easier to pass by using
memorization. And you really don't have to memorize a 1000 questions
word for word like a school play. You just have to be able to
recognize the correct answers, a much easier thing to do...

Homophobia?

I don't believe that I, or anyone else that frequents this newsgroup have "fear" of queers. I, for one, don't happen to believe that homos are discriminated against. Yeah, that's right, NOT discriminated against. You can hold a job, you can do what you like in private, you have freedom of speech--all the rights of any other American. What the "gays" ARE doing is trying to push a filthy, perverted, Godless, and WRONG lifestyle onto the public. But again you have the right to believe what you want, and I have the same right. One of the things that let this particular "cat" out of the bag was the trend in society to blame somebody else for their own actions--relegating responsibility to "others", or some "factor" in their past. The thing here that is missing is personal R-E-S-P-O-N-S-I-B-I-L-I-T-Y. Regardless of one's so-called "orientation", one can CHOOSE how one will act in and towards the public. The simple fact is, normal people, that is, Heterosexual people (the way GOD intended) will NEVER accept sodomy. It is not so much the fact that homos have been around forever, but the fact that they try to ram it down our throats where our gut reaction is similar to coming across a rotted corpse in the woods. It is a NATURAL reaction and will not be changed.

The thing that separates so-called homosexual discrimination, or homophobia, as you put it, from racial, female, or age discrimination is that people subject to that kind of discrimination can't CHOOSE their race, or gender, or age. These things are natural, homosexuality is not. Homosexuals may, or may not, "choose" their orientation, BUT they CAN choose whether to engage in sodomy, or whether to try to ram it in the public's face. As to the Boy Scout issue, they are a private organization, and private organizations still have the right to freedom of association--as do individuals. A heterosexual has to wonder WHY it was so important for gays to have access to BSA--especially as it pertains to Scoutmasters. Sorry, we can't help but wonder if it was the temptation of those tender young "sweet" virgin boys that made such access so important. Again, the issue is, not one's orientation, but the attempt to force it upon others. OK, so you're gay. Fine. Just keep it to yourself. People will likely "know" you are gay anyhow. But you are less likely to have trouble if you keep it to yourself. That's ALL. I would not harm a "gay" person just because he is that way--only if he attempts to make a "move" on me might I knock hell out of him.

The Bible says this is wrong. As with everything else, each person can choose to believe this Book or not. But for a quite convincing discourse against it, read the book of Romans, Chapter 1, starting about verse 18. After reading that, I cannot help that the "diet" related to homosexuality IS related--you know, the one that guarantees to make one slim. Trouble is, you just don't survive it.

Not at all. Congress only gets into thinking about getting
involved when they rule that FCC acted improperly on one issue or
another, as they did re: the 220 MHz band.

>> Your first and second statements are at odds, and implies
>> confusion. The second statement in itself again is somewhat

>"Independent" means "independent of the executive branch." With
>that in mind, the sentence makes perfect sense.

It's not a matter of putting the sentence in context; it's a
matter of the difficulties of expressing the written word in
English, often combined with bureaucratic legalese.

Who said they were? I'm on the record not only on the point that they gave us 20 years notice, but that the decision was based on economics, as hams just abdicated their position as a technical learning ground.

"And the FCC cheerfully furnished the required rope."

Regards,
Vince, WB2EZG

If he can't integrate new modes into ham radio without negatively
impacting other's use of other modes it simply ain't gonna happen. The
FCC won't let it happen. The only old mode which has completely
disappered is spark and that fell into disuse as a result of the much
more effective cw technology. Ditto (most) HF AM when ssb became the
standard. Neither of those modes posed operational problems for users
of other modes or required rules changes. That's how ham radio works.
His lack of understanding of the fundamentals of what makes ham radio
tick is appalling. Never mind a Tech would "re-invent" HF ham radio by
fiat given the opportunity.

So they will do what they want, but 20 years after deciding to eliminate
the amateur service they have yet to get it eliminated? That makes no
sense at all.

Well, we *were* talking about Ed's and my "Agenda" -- at least, Dick was. Do you think Carl's agenda is also ours?

> If he can't integrate new modes into ham radio without negatively impacting other's use of other modes it simply ain't gonna happen. The FCC won't let it happen.

One hopes.

> The only old mode which has completely disappered is spark and that fell into disuse as a result of the much more effective cw technology. Ditto (most) HF AM when ssb became the standard. Neither of those modes posed operational problems for users of other modes or required rules changes.

That's true in the AM case but was not true in the case of spark. There *was* a rule change that made it illegal to use spark. It was necessary because spark was incompatible with CW modes (for reasons similar to our concerns about SS, actually) and because although the vast majority of hams eagerly adopted CW, it would take only a few diehard spark operators to cause real problems.

> They're suitable up the spectrum, whether they attract a following is a question. They're entirely unsuitable for use on the HF bands which is where Dick and I are coming from.

But do all those who think there may be a place for HF SS have the intention of ridding the world of CW? Unless you agree with that, you and Dick are not coming from the same place at all.

Jon

I have never overheard a QSO where the topic of discussion was that people are memorizing over a thousand questions without learning anything.

You didn't answer my question about what percentage of your QSOs had that as the subject of the QSO, so perhaps you would be willing to tell us what percentage of the QSOs that you have overheard have had this subject come up during the contact?

If you "know" that, Dick, you aren't acting as if you do.

Do you now believe that ARRL makes policy by having Ed Hare and Jon Bloom
write posts for rec.radio.amateur.policy?

Do you think I am lying to you when I tell you that I am posting my personal
views?

Do you believe that the chief ARRL Lab Rat is the one who makes such ARRL
policy?

If you had your way, would that "can't do" philosophy be the driving force behind Amateur Radio?

If anyone ever says that a handful of hams memorize without understanding, I will agree that a handful of hams memorized without understanding.

I believe that most hams pass their tests the same way that I did, with a combination of learning, memorizing, lucky guessing and just plain skipping a topic or two, hoping there won't be a lot of questions about it on the test. That seems a lot more obvious to me than the alternative theories based on extremes. I guess we are each seeing the world through our own experiences. Can I offer you some help understanding some of the theory?

Vince Fiscus, KB7ADL <vlfiscus@mcn.net> wrote:

> The ham bands have gotten worse since April 2000. You tell me what's
> changed.

I have not heard that the bands have gotten worse, Vince. I have heard a few more "interim" calls than before, and a few more questions from newcomers, but the stepped up enforcment has actually improved the bands. A few months ago, I tuned up to 14.313 and heard a maritime net. There is still a lot of work to do, but the work will be in the area of FCC enforcement, not testing.

IMHO, it is a false hope to expect that the problems facing Amateur Radio will go away if only we could find exactly the right tests for incoming hams.

I fail to see a substantial difference between "an administrative division"
and "a facility supplying some public demand". The ARS is an administrative
division which supplies some public demand. Like I said, the service is
actually a service being performed for the citizens by the FCC.

On the contrary, Jerry, I'll bet that the majority of the world's
heterosexuals practice sodomy (as defined by the sodomy laws).

```

Hi Folks,

it seems the "Good Ol' Boy Group" AKA... The ARRL world never changes....

The history:

I was interested in becoming a OO, and I figured with my experience with Amateur Radio. I could offer my assistance.

This is the REAL deal... I was reading the paperwork in becoming a OO. and It seems, Me, a Licensed Amateur Radio Operator for 12 years, cannot be an OO for one stupid reason...... I haven't been a ARRL Member for at least 4 YEARS!

MY QUESTION TO THE ARRL BOARD...

WHY THE HECK SHOULD I BE A MEMBER OF A CLUB OR ORGANZATION TO BE A OO?????

I MEAN, WHY SHOULD I GREASE YOU PALMS WITH MY HARD EARNED CASH, JUST TO PROVE I'M ABLE TO BE A OO?????!?!?!?!?

WHEN IN ALL TRUTH, THE DAMN ARRL DOSEN'T GIVE A DAMN ABOUT IT'S MEMBERS, GEORGE RACE PROVED THAT WHEN HE TOLD ME AT A APPEARANCE HE MADE HERE IN DETROIT AND SAID THE FCC WAS GOING TO DO WHAT THEY WANTED, (ABOUT THE LICENSING CHANGES...) NOT MATTER WHAT THE PEOPLE WANTED AND THE ARRL DIDN'T DO ANYTHING ABOUT THIS....

BOTTOM LINE???

THE ARRL IS MORE INTERESTED IN THE BOTTOM LINE: MONEY!!!!

WE DON'T WANT YOUR HELP, UNLESS YOU ARE PAYING US MONEY!

SIGNED,

A SOON TO BE FORMER ARRL MEMBER!

73

Exactly how do you give yourself permission to believe those
delusions, Vince? I fail to see any detectable appreciable
change in the ARS because of the R&O. The Good Old Boys Net
is still in operation.

Of course it means the same thing, Vince. If they "know enough
to keep quiet" then they are having to choose to keep quiet for
*some reason*.

From http://www.arrl.org/FandES/field/org/oo.html:

2.Must be an ARRL Full Member and have been a licensee of Technician
Class or higher for at least four years.

The four-year requirement applies to being licensed, not to ARRL membership. You need only be a current ARRL member, which is true for any ARRL field organization appointment.

> MY QUESTION TO THE ARRL BOARD...

...should probably be addressed to the Board.

> WHY THE HECK SHOULD I BE A MEMBER OF A CLUB OR ORGANZATION TO BE A
> OO?????

Nothing prevents anyone from notifying (politely, one hopes) a ham of a problem in his or her station operation. You just can't do so under the auspices of an ARRL appointment unless you are a member and have been appointed. That doesn't seem unreasonable to me. If you are still interested, your SM is the place to start.

If anyone can be accused of employing imaginative fantasies in these discussions Vince, it is you. The FCC denied the petition, essentially telling the petitioners to take a hike. Doing so does not constitute telling the Amateur Radio Service to take a hike. That allegation is ludicrous.

You'd like to believe that Jim, but history is against you. We've known what's been coming down for 20 years. Many said "bull" to comments regarding easing of code AND theory requirements, until FCC pulled the plug a year ago. What's happening now is fully consistent with what we said was coming.

I'd almost be willing to bet that some of those people you've mentioned have
college degrees.

Before, you said that you administered them, then you said you read
through the pools, and now in the third round you're claiming to take
the exams more often than anyone around. Well, I don't know what to
believe, but what I do know is that the material on the exams is NOT
trivial, and it takes a goodly amount of study in order to be familiar
enough with it to pass the exams.

> No, I was a 14 year old high school freshman.

Okay, so you didn't have a technical background either. Just like the
folks you criticized above. That's hypocritical, Dick.

> > I'm also congnizent of the fact that this knowlege represents only the most

> licensee.

Please elucidate these differences in greater detail. Give yourself as
an example of the 'good kind of Extra' if you like. And then contrast
that with say, me for example. One of the kind who didn't have to meet
the "experience requirement" you evidently did.

> No question that is probably the most important factor. With it one

> don't get much detailed information in the pools.

What kind of detailed information that's missing from the pools, should
be included in the pools? Since you're on top of this, it should be
simple for you to provide.
And, it would go a long way toward proving your point.

> > Since there were no cheet sheets brought into the exam, you can be confident

> level demonstrated by so many new licensees.

It's an interesting point. Sure wish I could go back in time and see
how incredibly informed young Dick was as a 14 year old amateur radio
operator by comparison to todays new hams. From hearing you tell it,
you must have been a veritable electronics genious by comparison.

> These
> > facts are deemed to be those which are the most relevant to amateur radio

A more constructive change in tune would be welcome. If you're right,
then you should be able to recommend the specific necessary changes. If
you can't, well, it would seem more likely that you just like to hear
yourself complain about things.

> > Past tense. I think there are now roughly 1000 questions in the pool. Since

That's a non-sequitur.

> I did offer to Ed to use one of his new defective Handbooks to form
> some questions on new material, but he ignored me. I wasn't surprised.

You don't need Ed's permission to do anything, Dick. So that's not a
valid excuse.

> But I don't own a new handbook, though I started to buy one at a hamfest

> "bent cover" issues out to vendors to use as samples if they have so
> much handling damage they have to shrinkwrap every copy. The new
> handbook must not be a very big seller.

So the reason you can't tell us about all the important technical
knowlege that should be on the exams but currently isn't; which results
in the hams of today not knowing as much as you were required to know
when you were first licensed, is contained in one book. And being that
you encountered some difficulty in purchasing this one book, you either
don't know what the material is, or cannot provide it for some other
reason.

Hmmm, sounds reasonable. Excuses being what they are.

Guess instead you could write 1000 or so of your own questions, based on

your own personal expertise on the subject of course, and then just have
somebody throw out the ones that are already in the pool.

> > Question for you: how did you first learn the resistor color code? Was it;
> > bad boys rape our young girls but violet gives willingly?

> That wasn't the way I first learned it as a ham, but it's how they

So when you first learned it, as a ham, you derived it from first
principles?
Or did you employ a word association method?

Okay folks,

here's the deal...

I made a bit of a boo boo and was sort of misinformed.

It turns out, you don't have to be a league member for 4 years, to be
an OO. You just have to be a league member and at least a tech class

License holder for at least 4 years to be a OO.

So....

I made a mistake. sorry to all offended by my posting... Thanks to Don
N8NJE for calling me on the telephone to clear up the
misunderstanding.

If the "facility supplying some public demand" is provided by the government, how is it going to be provided without "an administrative division"? The different radio services are certainly divided into "adminstrative divisions".

Bruce W,
I think I'm missing something here. I'm not the one who
has a problem with my sexual preference, I don't need your
acceptance of my sexual preferences, and I'm certainly not
demanding some mythical 'rights' concerning my sexual
preferences, but ~I'm~ the one who needs 'help'? Why does
that not make sense?
'Doc

I'll bet the bastards
an ARRL member too. Probably got in on the League discount membership plan. All this started me wondering, What make a ham a ham? Is a ham someone that's working to improve their knowledge of radio theory, electronics and operating skills?

Well guess what guy? All of us ham have different drives. Some of you might obsess with code practice and technical details but surprisingly there are those of us who just enjoy the friendly banter with folks just like us from around the world. You did recall that part of being a ham was being able to do that right? Yes, we do good work in times of disaster and we try to be upstanding citizens but the bottom line is we are human with human needs. Relax my friend and enjoy the hobby your way and others will enjoy it their way. A little tolerance goes a long way.

Darren

Roger, don't be picking on your friends like that. Thats why you voted
Democratic this year isn't it. Because of the influence of your friends like
Bruce W. Of course, we all know that you are a Matthew Shepard supporter.

And the facts are that despite your attempts to normalize your perversions,
you are still a sodomite promoting unnatural sexual practices. You never
will be able to have kids of your own making but rather promote adoption of
children. One has to wonder why the selfish perverts want to adopt children,
because perhaps they can recruit more fawning fags into their movement. Keep
your perversions to yourself and your filthy friends. Sicko.

Hit the road faggot. We don't like your type of sodomite perverts running around teaching 13 year olds and younger that homosexuality is good. People are tired of the scum of your ilk trying to recruit young boys into your lifestyle. We can all see what a wicked pervert you really are.

Well, Leonard H. Anderson, I think the analogy is a good one. It beats
tipping scales which really aren't tipping by a mile. My story of the
State Dept. CW order wire (which I never ever said I instituted) was not
an analogy but a statement of fact in response to your guff about
government no longer using CW (but you already knew that).

Everything in the present will be in the past in a second or so.

You've dodged the questions again. The licensing procedure has now been
made much easier. Are you waiting for the modernization which you spoke
of (apparently the recent modernization did not suit you) in order to
deign amateur radio with your presence? Do you actually intend to
obtain a license or are you a perpetual procrastinator? Do you have any
real interest in amateur radio or does this newsgroup posting fetish of
yours represent a means for you to pass the idle hours?

It is not.

> how is it going to be provided without "an administrative division"? The
> different radio services are certainly divided into "adminstrative divisions".

A "bus service" facility consists of the whole of the activities of the
bus line (busses, mechanics, drivers, etc) not just the administration
of it.

The "Amateur Radio Service" facility consists of the whole of the
activities of the amateurs that comprise it, not just the FCC
administration of it.

Because you will be representing the ARRL as an official appointee. Don't
you think the ARRL has the right, as would any other organization, to be sure
that you meet certain criteria before letting you loose with a pad of OO forms?

>Class or higher for at least four years.

Considering you threw this blaring rant out without investigating the "REAL deal", (see Jon's post response above) I doubt that you are a viable candidate to be an OO anyway.

An OO is a person who, technical qualifications notwithstanding, must be able to demonstrate significant restraint and tact. Your use of the CAPS key to holler at us and make a fool of yourself is sufficient evidence that you don't have those traits.

Yes it just shows that Bruce W is supporting and promoting his homosexual
lifestyle on others. Perhaps he is also promoting his lifestyle to young men
and very impressionable kids. Its not natural to be queer but rather it is a
lifestyle choice. There is no gay gene even though the homosexual lobby
desperately grasps for legitimacy.
That is why they have to get the politicians on their side so they can give
homos special treatment

I can see why you dodged the question; a truthful answer would
demonstrate the absurdity of your oft-repeated claim that the current
testing system is destroying ham radio.

Jon

Darren Shields <dshields@midsouth.rr.com> wrote:

< Well guess what guy? All of us ham have different drives. Some of you might obsess with code practice and technical details but surprisingly there are those of us who just enjoy the friendly banter with folks just like us from around the world. You did recall that part of being a ham was being able to do that right? Yes, we do good work in times of disaster and we try to be upstanding citizens but the bottom line is we are human with human needs. Relax my friend and enjoy the hobby your way and others will enjoy it their way. A little tolerance goes a long way. >

Well said, Darren. My personal interests are technical, CW and QRP. That is what makes me a ham today, but who knows, my interests could change tomorrow. What makes the Amateur Radio Service GREAT is that we all are permitted to participate in our own way, but somehow, as a group, we meet the goals of the Service.

Gotta love it!

Are you saying that your 1963 Novice exam and today's Technician exam
are equivalent in technical material? No? Then memorization must
balance the scale to allow you to pass either in a day...

"Ed Hare, W1RFI" <w1rfi@arrl.net> wrote:
>If anyone ever says that a handful of hams memorize without understanding, I
>will agree that a handful of hams memorized without understanding.

If you say that *anybody* can pass the test without understanding the
material, how then can you deny that it is a bad test? A good test
would only allow people to pass who understand the material...

>I believe that most hams pass their tests the same way that I did...

But of course most people are not engineers. I believe that most
people do things the easiest way. For a layman the easiest way to go
is to memorize the questions and answers. The only other way to go is
to do months of study...

>That seems a lot more obvious to me than the alternative theories
>based on extremes.

There are no extremes in what I'm saying about the ham tests. It's a
simple truth. They can be passed without knowing the material...

>I guess we are each seeing the world through our own experiences.

Welcome back to the marble game... :-)

Actually, he does not need to know where to have the door hit him. Speaking as an ARRL HQ employee, I want to point out that his being displeased with something about ARRL does not mean that the ARRL will be better off without him. To the contrary, those who see things about ARRL that should be improved can be among its most valuable members, because those are the people whose ideas can improve the organization. If someone disagrees very strongly with one issue, I can understand why they might choose to leave, but in doing so, ARRL will not slam the door behind them. There are usually a lot more things to consider than one issue, and I usually consider a few of them myself after each ARRL Board meeting.

In this case, Chuck had made the very minor mistake of misreading a requirement. Jon Bloom corrected the info, and I see where Chuck acknowledged that correction in another post. I don't think that any of that is reason to hit him in his backside with a door.

I agree with Jon and you that those who want to operate within the ARRL's

Field Organization need to be ARRL members. After all, the League spends the members' money when it funds those activities. People who volunteer as OOs are not doing more of a service for Amateur Radio than they are for the ARRL, a job that is very much appreciated by most members and non-members alike. The administrative support for an individual OO is not apt to be a fortune, but some cases that the OOs become involved in cost quite a bit of your money to resolve. The fact that ARRL has to consider how it will fund the things it sets out to do should be important to us all. I can tell you exactly what the bottom line is, it is $0.00. In the long run, revenue and expenditures are exactly balanced. This year, it is actually a bit less; the League is funding some new initiatives that it believes are important to the long-term health of Amateur Radio and to the long-term goal of continuing to keep dues increases at a level below inflation.

At any rate, Chuck, I am glad that you were able to work things out. For future reference, you can address ARRL policy matters directly with your ARRL Division Director. See http://www.arrl.org/divisions. As an aside, for those who may not know, the bottom line for the ARRL Directors, Vice Directors, President, Vice Presidents and Treasurer are exactly zero every year. Those that set ARRL policy are, by its bylaws, not permitted to have any financial interest in Amateur Radio. That's why I can't run for Director. :-)

I am not sure what that means. Can you explain? If you are asking if you
have an opportunity to respond to my post, the answer is yes. I would like
to see your answer.

> IMHO, once hams have met the
> > requirements of our licensing structure, they are free to learn, or not
learn,

said
> > that hams should (not must) learn modern radio technology.

> Thats what you think you said, but youi forgot that you incoirporated
> the output of two FCC officials on the same subject, and that was
> included with your opinion.

Yes, I did include the comments of two FCC staffers one one or two occasions
when I stated my opinion. I felt that doing so better explained some of the
reasons I hold my opinion. I guess I didn't expect that anyone would feel
that the words of another would change the meaning of my words.

> You already know, if you want to recognize it, my beliefs on hte subjects
of what hams should know.

I think that you and I are not nearly as far apart on that as you might
think. If you are able to let go of your belief that I am adovocating that
hams must stop what they are doing in ham radio and must take up new
technologies instead, would you agree with my premise that it is important
that Amateur Radio, as a whole, continue to learn about modern
communications technologies in use in many other radio Services?

> Which makes the validity and quality of the tests even more imppotant.

I agree, Dick; I believe that improvements can and should be made in the
tests. I don't believe that the method used to test hams is so flawed,
though, that such improvements cannot be made.

> It does no good to have all these high flown beliefs if the

> implementation of testing is inadequately poor. I believe it is. You say
> you don't. The knowledge level of the "average ham", or lack of it, is
> the proof.

I don't see that the knowledge level of today's average ham is significantly different than it was when I was a General in 1963, at least not the knowledge that I used to pass that test. ALL I studied for the General was the ARRL study guide -- 16 pages of operating, rules and technical material. What IS different is the RELATIVE knowledge level of the hams of today wrt the significant changes in technology that have taken place since 1963. And that difference is not due to the fact that we now require hams to study over 1200 questions that take up over 100 pages to print instead of asking them to study 16 pages of material. The difference is there because technology has changed and it may no longer be likely that any one ham will know it all. But I bet the average ham of today knows more about RFI than I knew as a General. He or she knows more about digital electronics than I knew as a General. The number of Web pages on technical topics are legion; the ARRL Technical Information Service pages get tens of thousands of hits. These things don't happen because hams don't want to learn things.

All of the available evidence I have tells me that ham radio is not lacking in technical learning. I see only a handful of people who say they memorized the tests without learning, and, frankly, I think it likely that they learned more than they think they did. When I compare that handful to the people who I see who read web pages and articles and who are generally interested in learning things, I just can't let my opinion about what "vast hordes" of people must be doing be made from that handful.

I think, Dick, that the biggest difference between us is that I still believe in the present, and the future, of ham radio and want to take positive steps to make it happen the way I see it.

He's probably afraid that if he got on the air, nobody would want to
talk to him. Actually, he'd probably be a real interesting guy on the
air if he'd ever get off his amateur radio defamation binge.

I am still able to do 100% of what I was able to do before the restructuring
Report and Order. I do exactly that. What did the Commission take away
from you that makes you feel like it is no longer the Amateur Radio Service?

Are you now operating on Amateur frequencies using all of the provisions and rules of the personal radio services or are you using amateur power levels, amateur modes, amateur frequencies, amateur rules and amateur call signs?

If the former, I expect that you will, sooner or later, get to find out just what the FCC intends to accomplish within the Amateur Radio Service.

I did. I studied the ARRL 16-page General study guide for about a month
part time before I took my General.

> For a layman the easiest way to go is to memorize the questions and
answers. The only other way to go is
> to do months of study...

It would take me more than months to memorize all of those questions without
understanding. The most time consuming part would be avoiding the
understanding.

True.

>Non-Extras are not fast enough at Morse code to have a valid opinion.

At least not when it comes to code testing at speeds beyond the minimum (5 WPM) level.

>Post April 15 Extras didn't prove their Morse code skill so they also have no
>right to post their personal opinions.

They have a right to post their opinions, but those opinions do not carry any weight among those of us who met the Pre-April 15 requirements.

>Members of NCI shouldn't post their
>personal opinions. ARRL employees shouldn't post their personal opinions. See
>the pattern? Anyone who disagrees with Larry on the subject of Morse code
>testing should not post their personal opinions. :-)

Cecil, I don't recall ever stating that anyone who may disagree with
me should not post their opinions. Show me where I've done so, and
I will offer an immediate retraction and apology. If you can't, then keep
your damn opinions about me to yourself!

Cecil:

Let's just say that I recognize people who are trying to be annoying,
but my own tolerance for annoyance is unusually high. Therefore,
I can recognize you as being annoying, without actually feeling the
annoyance and experiencing the physical and emotional symptoms
of the annoyance. So, go ahead, and be just as annoying as you
care to be. Don't change a hair for me, not if you care for me!

Ed:

Keep in mind, I was assuming a QRP-level CW signal in the presence of QRO-level SSB signals. When power levels are equalized, then CW signals will predominate. However, my experience has been that multiple high-power SSB signals will tend to overwhelm weak CW signals under most circumstances.

>The 23 dB might be a bit optimistic, though, unless the CW receiver really is

>would say isn't there.

My mental CW filter is responsible for my completing many CW QSO's under very adverse conditions, but those conditions involved atmospheric noise and other QRN, not the deliberate QRM of multiple, closely-spaced SSB signals.

I hereby propose a capitalization test be given to any individual wishing to have the privilege of posting to this newsgripe. I also believe that in order to incentivize proper capitalization, that these tests be given in at least three levels of difficulty, with the incentive being a higher limit of messages that can be posted per day for each successive level. I believe that capitalization is a uniquely practical, effective, efficient, and universal method of inferring the relative importance of a word, in addition to the required use with proper nouns, words that begin a sentence, and acronyms. Obviously, anyone who doesn't use capitals correctly is a knuckle-dragging, slack-jawed, drooling, toothless client of the welfare state.

BTW -- anyone who doesn't believe in the use of capitalization
can leave now...but don't let the door hit you in the ass on the
way out!

Aaron:

I think you just wasted your time. I don't think anyone expects particularly "high brow" posts from ARRL HQ employees! At least, that's not been my experience! Admittedly, Ed does better than most at holding his fingertips, but Jon's posts are right in line with what I've come to expect. Too bad we can't get K1ZZ to post here -- it would be fun to be riduculed in public by the Executive V.P. of the ARRL -- just like I was in private correspondence from him! Of course, the worst abuse I took was from a former ARRL HQ employee who is now a silent key, so I don't think it would be right to give the details in the NG. However, if anyone's interested, E-mail me and I'll fill you in -- naming names and all!

Ed,

Possibly you might want to do a quick
Deja-news search on Chuck. Especially
his numerous postings to rec.radio.cb.

That might help explain the reaction that
some had to Chuck's post.

Ed:

Of course it's fun -- but the fun part doesn't commence until the determination to put forth the effort to master the skill of Morse code is made, along with a committment to stick with it. The problem is, most people don't get past their fear of failure or their antipathy once they see for themselves that it *does* require a dedicated effort on their part.

It isn't intended to encourage or discourage anyone, Ed. I'm simply stating the truth about the reality of learning to use the code. What part of this reality is untrue?

>>Restructuring will,
>>indeed, cause a decline in the total numbers of CW operators -- and
>>no amount of "positive thinking" will blow enough sunshine up the

>>hold steady -- it won't even slow down the rate of decline!
>
>Our ambassador of "can't do."

The "can't do" part is largely because a great many people who failed at meeting the previous code requirements simply decided that they "wouldn't do" since it was easier to whine and complain until the requirement was finally reduced/eliminated. Again, I ask -- where have I lied?

Ahhh, I see.  Welfare for the slackers who couldn't be bothered to
pick up a chainsaw and an axe.  I should have known you'd come
rushing to their defense, Ed!

Typical homosexual/Lambda response. Anybody that says anything about
homosexuals that does not support there choice in life is automatically a

"homophobe". Does that then make every homosexual a "heterophobe"? Homosexuals try to take every opportunity to shove their choice on everyone else with the purpose of trying to get everyone to accept the choice as natural. It's not. And the discussion of it does not belong here. You're right Bruce, this is not my choice, but it is the decision of the folks that started the newsgroup and I can find nothing that says this newsgroup is for the discussion of anything but amateur radio, not people's political beliefs or their sexual preferences or choices.

Furthermore, you criticize me for making proclamations, then you make a proclamation "it has been long claimed by members of both news groups that hams are political....yada, yada, yada. Well it has been long claimed by these same hams that discussions on homosexuality and other sexual choices do not belong here.

Taking your absurd position, any topic should be discussed in the ham newsgroup. Because hams have pets, we should discuss pets. Because hams drives cars, we should discuss cars here. Keep the homosexual discussions in homosexual newsgroups where it belongs. Keep the radio discussions here.

Brian Kelly, w3rv wrote:

> The U.S. Unhindered have been on the air for a decade. Where are their "altenative technologies"?? The only "alternative technologies (modes)" I've seen in the past decade are the plethora of new and rapidly emerging HF digital modes cobbled together by a multinational collection of 12/13/20 wpm code-tested "dinosaurs".

Stop thinking in such limited terms. These contributions, that you seem to find so necessary, does not have to be limited to just ham radio. My interest in ham radio came from my interests outside of ham radio, and much of my experience gained through ham radio is used outside this service.

However, having said that, I will go back to what I said once before - no person has ever been judged worthy, or not worthy, of being a ham based on his or her ability to produce "alternative technologies." If that is the primary requirement, than I dare say that 99 percent of current hams would have to turn in their license (including me and most likely you).

Furthermore, you're not trying to rush things, are you? It took ham radio almost 90 years to produce the "alternative technologies" it has been credited with so far. The no-code hams have had less than 10 years, and you're already ready to throw them out because they haven't produced to the level you desire.

> You run EME with packet or what?

The last time I messed with EME (at a friend's station in Italy), it was limited to SSB voice. I don't have EME capabilities at the moment (no place to put the antennas), but when I do it will be SSB voice.

> Tune 14.000-14.050 Mhz this coming

I have never said a thing about the "death" of HF or CW. Emphasis on one part of the radio spectrum does not mean the "death" of another.

I can't criticise him too much for that - I've done it myself (though not for two years). When you move 7 times in a three year period, it gets to be a real pain to constantly file change of address data with the FCC. After that, I've become almost an "expert" on the FCC's online system.

>
> Disagree, unless you're already an engineer. Electronics questions that would take months to learn are easier to pass by using memorization. And you really don't have to memorize a 1000 questions word for word like a school play. You just have to be able to recognize the correct answers, a much easier thing to do...

Not only that, the tests are taken one at a time. That means a third of the pool is studied for each. BIG difference

I guess I'm gonna have to go get a question and show in detail how they go about doing the word association bit, explain it in lurid detail for all the world to see, right here on rrap, before he gets the point. I didn't want to do that, but.....
It was years into my VE career before I realized how they do it. I say again, the less one knows about the subject matter, the easier it is to pair the question and its answer, since some knowledge of details will only confuse the memorization of the question and it's answer. When one reads the question with ONLY the correct answer, as pairs, (you discard all distractors before you ever begin) several times over, your memory naturally pairs them so that when you take the test, the answer you have repeatedly read in conjunction with that question literally leaps out at you. It is the only one of the choices given that you've seen before and it is easily recognized. The *less* you know about the subject, the easier it is!

No, it is a hobby that is also a service. The hobby part comes first, because without the people engaged in this hobby, there would be no service.

Of course, before you (or someone else) go crazy, I didn't say this is "just" a hobby. For more on this, see my comments in another current thread ("Pride").

Which means you don't know where Dick was coming from. When you consider the entire "modernize" movement, you see little support for CW and what there is is lukewarm at best. It is pretty clear that most of them would dump CW entirely if the opportunity presented. As it did to NCI when ARRL sat on its hands the last time round. I still wonder if the FCC isn't still pissed because of the lawsuit ARRL filed against it years ago. That caused me to drop my membership for a couple years. The reason they sued I don't remember, it was so trivial, but the whole scheme was ridiculous. What did they hope to gain by suing the FCC?

The BOD voted last month to "Not change its policy of supporting a CW qualification *at this time*", on a voice vote, then voted down a motion to poll the BOD for individual votes. Why? Rather simple. No one, member or not, can find out how any BOD member voted, either for or against the motion, thus no individual member can be held accountable by either side of the code test issue for his vote. Since the entire BOD is not voted on, only as individuals, they're ALL safe! That's straddling the fence if ever it happened!

 Yes, *after* you had already accused me of misrepresnting your
statements.
As I said before, your mention of Hatfield and Hollingworth's comments
was taken to mean that I understood their meaning to be as you did.
Evidently you just threw them in for fun.

You have figuratively said the sky is falling on the ARS. I haven't
seen it falling. When is it going to fall?

Sounds to me like you're coming from exactly where I said.

Jon

He might be interesting save for the pontificating and the sour grapes
attitude.  You'd think that a guy who is interested enough in amateur
radio to haunt a newsgroup for years would make some attempt to obtain a
license of any class.  If he did that he wouldn't be able to make
statements about not being given entrance to the lodge hall.

Until he obtains a license from the FCC (the only agency to grant
amateur radio licenses), he is an SWL.

Don't bother, Dick. That's exactly how I got my Conditional license
50 years ago.

You don't have to state it, Larry. Everytime someone disagrees with you,
you tell them their opinion doesn't count, i.e. carry any weight, for one
reason or another.

 So you want me to make full disclosure each and every time?
Yes, I  - 1.) administered tests,  2.) took each new test as a practice
exam as new ones arrived to screen them for accuracy and also to see
what was on them. That means a took a lot of test, unofficially of
course since I had long held an Extra class. Clear now?

 but what I do know is that the material on the exams is NOT
> trivial, and it takes a goodly amount of study in order to be familiar
```

> enough with it to pass the exams.

IF and only if one studies to learn the material, and not just to be
able to match a certain answser with it's matching question, which can
be done without learning the subject material, and often is done.

> Okay, so you didn't have a technical background either. Just like the
> folks you criticized above. That's hypocritical, Dick.

What is it with you guys anyway? Your understanding has evaporated.
NO, I had no technical background when I becaeme a Novice. And not a
whole lot more a few months later when I became a General, though I had
learned considerably. But 13 years later when I took all the tests for
Extra, I had been through five years of military electronics including a
6 month comprehensive course where were started at the beginning and
went through color Television, transmitters and microwave. Even spent a
couple weeks on solid state, back in the transition days when most gear
still used tubes.
And I had studied for, taken and passed the Second class radiotelepone,
first class radiotelephone operators licenses, plus the Ship Radar
endorsement.
So, Yes, I did have a technical background when I took the Extra exam.
Clear now?

Besudes that, damn it, how many times do I have to say it?

***IT IS NOT THE FAULT OF THE ASPPLICANTS THAT THEY CAN PASS THE TESTS
WITHOUT KNOWING ANYTHING ABOUT THE MATERIAL, RATHER IT IS THE FAULT OF
THE TESTING SYSTEM**

Clear now?

Simple enough. When someone with no technical knowledge can use the
question pools to pass the license tests through Extra class, while
learning nothing oif consequence about the technical material involved,
there is nothing
extra about the Extra class license.

> simple for you to provide.

You bet it is. You prpobably remember that Ed Hare posted four or five
questisons and answers from the new pools a week or so ago, questions
which were constructed such that associating a particular word pattern
set with the question without actually knowing the material, as is
normally done, would be very difficult, and it would indeed be much
easier to learn how to work the problem. THAT is the answer, to have
most of the questions constructed in that manner. Simply make it
impossible to do what has been done since 1985 by people who found it
easier to study testing techniques instead of the material.

It isn't a matter of sufficiency, rather of question construction as noted above.

Done, above.

>

> > some questions on new material, but he ignored me. I wasn't surprised.
>
> You don't need Ed's permission to do anything, Dick. So that's not a
> valid excuse.

No excuse involved. I don't own a new copy of the Handbook, as noted earlier, and thenew modes aren't coivered in my 96 edition. Ed offered Aaron Jones a defective copy from the scrap bin if he would give his mailing address, an obvious ploy to draw out the anonymous Jones. Of course it was denied, and I decided to let Ed put his money where his mouth was- I would use one of the damgaged Handbooks to make up 10 questions on the new material if he would send it to me. I really didn't expect him to do it, of course, but it was a chance for him to show how serious he was about promoting hams to construct new questions. But I don't worry about the new modes, what I want is for the tests to correctly evaluate the applicants learning level at test time. I don't believe that the tests should be hard, if the material already covered was tested accurately it would cover more than enough material. But as it is, you as an engineeer or whatever might make no better score than one who knows nothing whatever about electronics. That's what you want in a testing system?

>

> principles?
> Or did you employ a word association method?

BIG difference. When I word associated the color codes, it was for the purpose of relating them to something that I UNDERSTOOD. As done for the tests, with the question pools, the applicant does it merely to match two things accurately, neither of which he has any understanding.

Ed is wrong. People DO get ham radio licenses to "Not learn". Mostly they get them to talk on radios. And then they learn what they find they must learn as they go, if they can. Frequently that learning is embarassinly inadequate.

No case covers anywhere nearly all, of course. But the point is that far too many licensees have made it to Extra class with far too little knowledge. That has seriously degraded the license, and it shows. Ed evidently doesn't, but I hear about it all the time on the air, Extras who know virtually nothing technical.

No, that's not what Vince is saying at all. He's saying that you don't know
Ohms law any more - nor does anyone else in amateur radio. Everyone forgot
it 20 years ago. Or was it on April 15th last year. Anyway, remember when
that happened? ;-)

So you believe it doesn't matter at all that many Extra class
licensees
became licensed on the question pools without learning anything
meaningful in the process - that doesn't damage ham radio? Somehow I
don't think your answer will surprise me.

Yes indeed. But it must be understood that we force no abandonment of
our older modes, even unintentionally, in the process. I think we agree
on that.

> > Which makes the validity and quality of the tests even more imppotant.
>

I can even agree here, given the few questions you posted last week. If

most of the test questions were configured as those were, there'd be no
proble and my dissatisfaction with the tests would completely evaporate.

>
> I don't see that the knowledge level of today's average ham is significantly

The most glaring examples are Extras, I'm afraid. They are expected to
be at least modestly knowledgable, and far too many are not.

ALL I studied for the General was
> the ARRL study guide -- 16 pages of operating, rules and technical material.
> What IS different is the RELATIVE knowledge level of the hams of today wrt

We're not that far apart, although I believe I've seen things in the
field,as a VE, and on the air, that you have missed. (I do work and
listen to quite a lot of SSB on HF as well as CW). And the years as a VE
was an eye opener.
I know that no one is expected to be schooled in electronics just to get
a ham radio license, but it should be at least moderately difficult to
get to the Extra class, if it is to mean anything more than lip service.
Fifteen years of question pool exams have about trashed it. With the
pool situation as it has been it isn't. I think that can be improved,
not by adding material necessarily, but by rewriting many questions so
as to make them more difficult to pair answers without learning, as
noted earlier.

Not to worry Dwight because it apparently does no good. I changed my address last September when I moved and it took because the FCC database was updated within a few weeks. However when I got official correspondence from the FCC a couple of days ago (about my password notification for CORES) it was, you guessed it, sent to my old address...   :-)

You were an *engineer* when you got your Extra, were you not? Didn't that 4 years of technical schooling help you a bit with the test... :-)

>I did. I studied the ARRL 16-page General study guide for about a month
>part time before I took my General.

That was then, this is now. I'm talking about today's ham test. The one with the exact questions and answers published and available for memorization...

>It would take me more than months to memorize all of those questions without
>understanding. The most time consuming part would be avoiding the
>understanding.

It would take a layman a year or more of technical school to really learn the electronics on the Extra test. He can memorize it in a week...

Ed, It IS much easier to do when you know nothing about the subject
matter.
These are things I learned from the years as a VE. Rewriting questions
can fix that.

Oh now I get it.   They "know enough to keep quiet" so as to keep from getting "nailed" because Congress has a "history" of wanting to "dumb down" amateur radio operators until they can no longer fix or even use their radios. And by then they'll be so stupid that the radio fairies can come right down and take away all the radios. And the FCC can finally sell the spectrum to Kenwood. And Vince can finish smoking the rope the FCC supplied.

The End.

So let it be written, so let it be done, thus spoke Biancomano.

I don't accept your premise.

> - that doesn't damage ham radio?

I want to see specific examples of the damage, Dick. What can you no longer do in ham radio due to the damage caused by recent licensees? Are these licensees keeping ham radio from fulfilling its public service role? Are they inhibiting interested people from learning radio technology and technique? In short, in what specific ways are these licensees diminishing ham radio? Mind you, I'm not looking for vague assertions that they don't know enough, I'm looking for specific information about what they are doing that is causing damage. If you can provide such specifics, it will help make your case. If you cannot, then your belief that ham radio is being damaged is mere speculation.

> Somehow I
> don't think your answer will surprise me.

Somehow, I don't think yours will surprise me, either. But I'd be delighted to be proven wrong about that.

Jon

I don't believe we need to discuss Fudge Packers & Colon Cappers in this
newgroup, they're off-topic. We should be discussing the decline of the
ARRL and why they don't want to petition the FCC to help improve amateur
radio operators and their operating practices.

Just a thought.

Do you think you would have passed many them? ;-)

> *IF and only if* one studies to learn the material, and not just to be
> able to match a certain answser with it's matching question, which can
> be done without learning the subject material, and often is done.

The answer contains the words which are the correct answer to the words
contained in the question. I wonder how somebody could know the words to
the question and the words to the answer, know that the two correspond to
each other, and not know anything about subject of the sentences. Doesn't
make a lot of sense, Dick. Certainly isn't worth losing any sleep over.

> > > No, I was a 14 year old high school freshman.

> >
> > Okay, so you didn't have a technical background either. Just like the
> > folks you criticized above. That's hypocritical, Dick.
>
> What is it with you guys anyway?

What guys? Have I been using the royal "we" again? :-)

> NO, I had no technical background when I becaeme a Novice. And not a
> whole lot more a few months later when I became a General, though I had
> learned considerably.

But that would be impossible for anyone to do nowadays, right? I'd like to
suggest that you were probably just as "stupid" then as you claim so many of
your applicants are today.

> So, Yes, I did have a technical background when I took the Extra exam.
> Clear now?

I had more than 25 years of electronics background when I took my Extra
exam.

> ***IT IS NOT THE FAULT OF THE ASPPLICANTS THAT THEY CAN PASS THE TESTS
> WITHOUT KNOWING ANYTHING ABOUT THE MATERIAL, RATHER IT IS THE FAULT OF
> THE TESTING SYSTEM**

Error. Error. Error. What proof do you have that the applicants don't know
any of the material? I claim their CSCE is proof they know the material.
If you don't, why the heck did you sign them?

> Simple enough. When someone with no technical knowledge can use the
> question pools to pass the license tests through Extra class, while
> learning nothing oif consequence about the technical material involved,
> there is nothing
> extra about the Extra class license.

What it really sounds like to me, is that you need that piece of paper to
prove something about you. Well, that's fine. If it took a great deal of
effort for you, then you can be proud of your accomplishment. What somebody
else does has no affect on that. I've noticed that once I've accomplished
something, and then years later I go back and look at my work, it doesn't
seem as significant a task. It seems to me that you're judging the amount
of work required for Extra now in kind of the same way. Now it would be
easy for you, but when you first did it, it was quite an accomplishment. Ya
oughta give the young fellers more of a break there, Dick.

> > What kind of detailed information that's missing from the pools, should
> > be included in the pools? Since you're on top of this, it should be
> > simple for you to provide.

> You bet it is.

You mean it's easy as long as somebody else (like Ed) does it.

> > From hearing you tell it, you must have been a veritable electronics genious by comparison.

> Would you be kind enough to let us know what you read that led you to form that opinion?

Like I said, I read your opinion that nobody learns anything anymore - not like you did when you were just starting. Your evidence was based on your observations of these folks. I claim that you would have probably sounded just as dumb back then. By the time you got your Extra, you were a trained electronics something or other. That's an advantage over guys who aren't. But no one is required to have that kind of background. I'd claim that a guy who gets his Extra without that has accomplished more.

> It isn't a matter of sufficiency, rather of question construction as noted above.

Well then, since you know exactly how to fix things, what's stopping you?

> > A more constructive change in tune would be welcome. If you're right, then you should be able to recommend the specific necessary changes.

> Done, above.

Searching.......

> > You don't need Ed's permission to do anything, Dick. So that's not a valid excuse.

> No excuse involved.

You provided nothing but a list of excuses for why you couldn't write exam questions.

> I don't own a new copy of the Handbook, as noted earlier, and thenew modes aren't coivered in my 96 edition.

I thought you said the problem was with the way the questions were written. Why not just go through and edit the question pool? Too much work, maybe? Easier to just blast the QPC here on the newsgroup? I'm sure those guys have other things they could be doing as well, Dick. But please, leave the questions about the new modes to someone with more experience with that. ;-)

> But as it is, you as an engineeer or whatever might make no better score than one who knows nothing whatever about electronics. That's what you want in a testing system?

Hey, if I don't know more of the answers than somebody else, then I think that's the way it's supposed to work. As you've said, being an engineer doesn't necessarily make one an amateur radio operator. Passing the FCC exams does however.

> > So when you first learned it, as a ham, you derived it from first
> > principles?
> > Or did you employ a word association method?

> BIG difference. When I word associated the color codes, it was for the
> purpose of relating them to something that I UNDERSTOOD.

What's there to understand about a color code? bad=black boys=brown,
rape=red, our=orange.........

>As done for the
> tests, with the question pools, the applicant does it merely to match
> two things accurately, neither of which he has any understanding.

You mean like matching the words '20 meter amateur band limits' to '14.000
MHz - 14.350 MHz'?

> Ed is wrong. People DO get ham radio licenses to "Not learn". Mostly
> they get them to talk on radios.

You need an amateur radio license to talk on amateur radios. Isn't that
what most hams do with theirs?

>And then they learn what they find
> they must learn as they go, if they can. Frequently that learning is
> embarassinly inadequate.

Who's they? Those guys who just got their license? Yes, we all know that
you were an electronics genious when you first got your ticket, Dick.

>   No case covers anywhere nearly all, of course. But the point is that
> far too many licensees have made it to Extra class with far too little
> knowledge. That has seriously degraded the license, and it shows. Ed
> evidently doesn't, but I hear about it all the time on the air, Extras
> who know virtually nothing technical.

I think you overstate things a bit. But I'll give you one thing. Chances
are a guy who gets his Extra after 4 years (or 2, like I did), is not going
to know as much amateur radio as a guy who gets it after 20 years of
operating. On the other hand, what took him so long? ;-)

>I don't have EME capabilities at the moment (no place
>to put the antennas), but when I do it will be SSB voice.

Why not use a digital mode? With a slow data rate, FEC and some long-term integration and similar processing techniques, it should be possible to do 2X EME with modest stations.

>I have never said a thing about the "death" of HF or CW. Emphasis on one
>part of the radio spectrum does not mean the "death" of another.

Especially when there is nothing about the rules changes that takes away any personal emphasis any individual ham may have been placing on mode or spectrum.

>

>> No, I suppose no such thing. But one thing I *am* sure of is that ham
>> radio can embrace a wider variety of interests than those of any one
>> individual.

> That's news??? It's been that way since long before I came along.

Then you believe it is also true of those who take tests today? If so, I
agree.

> Nonsense, and you know it. The difference is in bottom line
>qualifications. The drift, which has turned into a fulscale slide, is
>toward NO basic qualifications at all. And it is very close to it at
>this writing.

I disagree. The qualifications of hams today are greater than they were when I
studied a 16-page study guide to get my General and all amateur privileges.

> Damn it, ham radio was never meant to be an all-inclusive passtime.

Why would you want to damn ham radio?

> It has always been for the technically ivolved.

At least those technically involved enough to learn/memorize/guess on a test
covered by a 16-page study guide.

>So now you advocate that all be as one, the LEAST qualified one. I don't
>think you could have made it more clear.

Jon did not say that, you did, so that makes it your opinion. I strongly
disagree.

> They sure do, and when they happen to be code haters anything they say
>is accepted as command, and the beliefs of OTs are cast aside.

Jon didn't say that either.   You did, so it is your opinion. I strongly
disagree.

It is very difficult to discuss things with you when you make things up from
your own opinion and then take issue with others for saying them.

I think Jon got a bit confused when you disagreed with Carl's point of view by responding to what I had said. A natural error, considering you kept quoting me and disagreeing with Carl without actually naming him until later in the thread.

At least it is not as bad as others who disagree with themselves in response to my posts. :-)

>>signal, the CW signal will lose. I believe he is incorrect.

>Keep in mind, I was assuming a QRP-level CW signal in the presence
>of QRO-level SSB signals.

Did you stack the deck to help make your point? The point will be diminished by those who note that you stacked the deck.

>However, my experience has been that
>multiple high-power SSB signals will tend to overwhelm weak CW
>signals under most circumstances.

It is my experience that multiple high-power SSB signal will tend to overwhelm other high-power SSB signals. I would say that 90% of the time, there is one SSB signal per 2500 Hz bandwidth. If there are "dozens," no one is communicating.

>My mental CW filter is responsible for my completing many CW QSO's
>under very adverse conditions, but those conditions involved atmospheric
>noise and other QRN, not the deliberate QRM of multiple, closely-spaced
>SSB signals.

I would imagine not. I have never been deliberately QRM'ed by multiple, closely-spaced SSB signals in the CW portion of the band. A few Canadian ops have caused my 5 W CW signal some grief on 40 M, but I expect that they heard me very weakly, so just assumed they would be weak to me, too.

On how many occasions have you been deliberately QRMed on your CW QSOs by multiple closely spaced SSB signals? What percentage of your CW QSOs have been subject to such QRM?

>using amateur power levels, amateur modes, amateur frequencies,
>amateur rules and amateur call signs?

You've missed the point entirely. Conversing on 'amateur frequencies' within an 'amateur service' does not an Amateur Service make. Without a technical learning infrastructure (and we no longer have that), we no longer have Amateur Radio, as defined. That's what the petition for reconsideration is about. And FCC is still frozen in place with it, not knowing how to handle it.

>The End.

For the Amateur Service, unfortunately.
It could take two decades to restore it.
The fact that the Commission still has the
petition for reconsideration in hand a
year after filed, still trying to figure out
how to address it, is proof positive they've
created a monster of their own making.

Vincent Biancomano wrote:

> You've missed the point entirely. Conversing on 'amateur frequencies' within an 'amateur service' does not an Amateur Service make. Without a technical learning infrastructure (and we no longer have that), we no longer have Amateur Radio, as defined. That's what the petition for reconsideration is about. And FCC is still frozen in place with it, not knowing how to handle it.

The world according to Vince: The FCC has no allegiance to anyone, is on a 20-year mission to destroy ham radio, and is unable to figure out how to write a response that says: "Nothing new here. Dismissed."

Jon

I'm sure Dave knows, as do you and I, that there is considerable
difference in learning to recognize the characters and in acquiring the
skill level needed to pass a ham radio test.

Sure they do. One representing a certain level of accomplishment. So
when the license can be issued without the licensee having reached that
minimal level of accompliahment......????

It was posted as a joke. Maybe if you ask nicely, Hans will explain it to you,
since you obviously haven't got a clue.

>>Why should I do that? I'm not the one making the errors.
>
>Yes you are. You've changed the original conditions and
>then make a big case out of "errors."

How did I "change the original conditions"? Your first post labeled all
Technician licensees as "noncodetested" (which I have proved to be not the case
at all) and all other licensees as "codetested".

It is this mislabeling that I have contested. That's all.
>
>You avoided the pre-April 15 period counting in detail yet you
>HAD to make a big thing out of post-April 15 numbers.

You did not post the pre-April 15 numbers until later. You, not I changed the
"original conditions".
>
>Too bad, all that "pointing out 'errors'" for nothing.

Not for nothing. Any reasonable person reading my posts will recognize and
agree that you mislabeled several thousand "code-tested" licensees as
"noncodetested". To be exact, you mislabled at least 3303 of them out of less
than 14,000. That's a prettty big error.

> The
>newcomers are going for the no-code-test Technician
>license class and have been for years.

And I have agreed with that in every post. Why do you keep repeating the
obvious?

>They are still doing
>it after restructuring.

Of course. The Technician was the easiest US ham license to get before restructuring and now it's even easier to get. And the privileges granted are extensive. So extensive, in fact, that the only reason to upgrade beyond Technician is to get on the HF/MF ham bands.

>Try to understand where US amateur radio is going for the future.

I thought you claimed that I could not predict the future, Len. Are you predicting the future?
>
>Denial of the obvious is not a good thing, benefits no one,
>cannot change official positions.

Then why do you keep denying the obvious errors you have made in your posts?

Maybe. 5 wpm is "approaching 20 wpm". ;-)

>He could certainly
>manage
>a code QSO today, though he has not accepted my invite to do so.

I wonder why not? More than a year ago I recall him posting that he was going for Extra, had a new house with no antenna restrictions, the works. None of it has happened. No articles on SS or anything else that I've seen, either.

>
>Maybe I will have to be him a lobster dinner that he can't. :-)
>
>>he advocates elimination of all subands,
>
>The US is one of few countries that has actual sub-band allocations;

How many other countries have as many hams as the USA with HF privileges and power greater than QRP? Think about WHY the USA has subbands.

>they sort
>themselves out by band plan.

They are supposed to - but the foreign 'phones are now down below 7050, for example.

There is also a growing philosophy of "if it's not prohibited by the FCC, I'm gonna do it, don't tell me about no steenking bandplans". I have seen it here and elsewhere.

>His basic recommendation is that the rules say
>"these are your bands; stay within them."

That's not the end of it. He wants NO "support for legacy modes". Translation: If your QRP CW signal gets buried under his highpower DSSS signal, too bad, you should get with the program and stop using the legacy mode.

>Unfortunately, what works in some
>countries would possibly not work in the US. On 160 M, for example, the band
>plan for CW operation is regularly stomped on by phone operators, some who
>know
>better; some who do not.

Agreed. The best system I can think of is to have subbands-by-mode, not by license class.

> I think the same mentality that drives the Know Code
>=
>no Ham spams would show up with a small, but very noisy, group, who could

>it rapidly unworkable.

It is the phone boys who stomp on the CW folks in your example, though.

>Why, even our Cecil wanted to engage someone in a 5
>wpm
>QSO in the DX windows, just because he can.

Maybe. One never knows. Except for myself, W3RV and K4YZ, I have no knowledge that any of the regular posters here ever actually get on the air at all. (I know about those two because I've worked 'em.)
>
>>he advocates the use or wideband

Why? What are the advantages?

>He wants to give it carte
>blanche, however. Is there room for it on 80 M? How about 160M? How about
>30M, where some commercial stations could be already using it? How about 10
>M?

Doesn't matter. He wants a "free market of modes" - and that includes DSSS, not just FHSS. No limits, and if the existing narrow-band users are interfered with, tough.
>
>>and he goes off on anti-cw rants at

You're years too late. I imagine I've probably taken more ham radio exams than most anyone around. I mean the question pool variety. Just to see what they amounted to and to detect any errors.

> > But I'd ecpect the crowd you administer to is a different sort of

Of course they could, but of course that's not the only way they can be characterized.

> >   Away from centers of technical education and expertise, out where the

> a prerequisite to obtaining an amateur radio license?

No, I was a 14 year old high school freshman. And No, I do not. I merely point out what Ed denies - that is easier to word-associate most questions and answers than it is to learn the material. That is exactly what Dick Bash had going in the 70's.

> As a VE and fellow radio amateur, I'm less concerned with how they learn the
> material than with whether they've learned the material. I'm in agreement
> with the FCC and the VECs that when someone passes the tests, they have
> demonstrated the requisite knowlege for obtaining an amateur radio license.

We all agree that is the objective. But it is clear to me that it frequently is not met. I don't suppose it really matters, but what it has done over time is to cause the validity of the testing system- and many of its licensees to come under serious ridicule-from many other hams. And I don't mean me, either. I frequently hear it on the air.

> I'm also congnizent of the fact that this knowlege represents only the most
> rudimentary aspects of amateur radio. But I feel that the balance is best

> learned in practice - with experience.

I suppose it was inevitable when they made the Extra class license
available with no experience requirement and with a test system of given
